

## Clinical trial results:

**A phase IIIb open, controlled study to evaluate the immunogenicity, safety and reactogenicity of GlaxoSmithKline (GSK) Biologicals' 10-valent pneumococcal conjugate vaccine when given as a catch-up immunization in children older than 7 months of age or given as a 3-dose primary immunization in children before 6 months of age.**

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To evaluate the immunogenicity of GSK Biologicals' 10-valent pneumococcal conjugate vaccine, when given as a catch-up immunization in children older than 7 months of age (three age-groups with different schedules).

Protection of trial subjects:

All vaccines were observed closely for at least 30 minutes following the administration of vaccines, with appropriate medical treatment readily available in case of a rare anaphylactic reaction.

Vaccines/products were administered by qualified and trained personnel. Vaccines/products were administered only to eligible subjects that had no contraindications to any components of the vaccines/products. Subjects were followed-up for up to 31 days for adverse events after the last vaccination/product administration and during the entire study period for serious adverse events.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 September 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

## Subject disposition

### Recruitment

Recruitment details:

The study included a primary (PRI) phase (all groups) and a booster (BST) phase (only 10Pn <6M and 10Pn 7-11M groups).

### Pre-assignment

Screening details:

At screening the following was performed: informed consent was obtained from & signed by subjects' parents/guardians, check for inclusion/exclusion criteria and precautions was performed as regards contraindications to vaccination, and medical history of subjects was collected. Subjects' pre-vaccination body temperature was evaluated.

### Period 1

Period 1 title	Primary Vaccination Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	10Pn <6M Group

Arm description:

This group consisted of subjects up to 6 months of age at first vaccination who received 3 doses of 10Pn-PD-DiT (or 10Pn) vaccine co-administered with Infanrix<sup>TM</sup> IPV/Hib (DTPa-IPV/Hib) at 3, 4 and 5 months of age and a booster dose of the same vaccines at 12-15 months of age. Vaccines were administered intramuscularly in the right (10Pn-PD-DiT) or the left (DTPa-IPV/Hib) thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Arm type	Experimental
Investigational medicinal product name	10-valent streptococcus pneumoniae conjugate vaccine
Investigational medicinal product code	
Other name	10Pn-PD-DiT, 10Pn
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 primary doses administered at 3, 4 and 5 months of age followed by a booster dose at 12-15 months of age, all injected intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Investigational medicinal product name	Infanrix-Polio+Hib
Investigational medicinal product code	
Other name	Infanrix <sup>TM</sup> IPV/Hib, DTPa-IPV/Hib
Pharmaceutical forms	Powder and solvent for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

3 primary doses administered at 3, 4 and 5 months of age followed by a booster dose at 12-15 months of age, all injected intramuscularly in the left right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

<b>Arm title</b>	10Pn 7-11M Group
------------------	------------------

Arm description:

This group consisted of subjects 7 to 11 months of age at first vaccination who received 2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose one month later, and a booster dose at 12-15 months of age. The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Arm type	Experimental
Investigational medicinal product name	10-valent streptococcus pneumoniae conjugate vaccine
Investigational medicinal product code	
Other name	10Pn-PD-DiT, 10Pn
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

2 doses, one first dose at enrolment followed by a second dose one month later, followed by a booster dose at 12-15 months of age., injected intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

<b>Arm title</b>	10Pn 12-23M Group
------------------	-------------------

**Arm description:**

This group consisted of subjects 12 to 23 months inclusive at first vaccination who received 2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose 2 months later. The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Arm type	Experimental
Investigational medicinal product name	IMP Name 10-valent streptococcus pneumoniae conjugate vaccine
Investigational medicinal product code	
Other name	10Pn-PD-DiT, 10Pn
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose 2 months later, injected intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

<b>Arm title</b>	10Pn >=24M Group
------------------	------------------

**Arm description:**

This group consisted of subjects aged between 24 months (inclusive) to 5 years (inclusive) at vaccination who received one dose of 10Pn-PD-DiT (10Pn). The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Arm type	Experimental
Investigational medicinal product name	10-valent streptococcus pneumoniae conjugate vaccine
Investigational medicinal product code	
Other name	10Pn-PD-DiT, 10Pn
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

One dose administered when subject's age was between 24 months (inclusive) to 5 years of age (inclusive) at vaccination, injected intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

Routes of administration	Intramuscular use

**Dosage and administration details:**

2 doses, one first dose at enrolment followed by a second dose one month later, followed by a booster dose at 12-15 months of age., injected intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).

<b>Number of subjects in period 2<sup>[1]</sup></b>	10Pn <6M Group	10Pn 7-11M Group
Started	145	145
Completed	141	145
Not completed	4	0
Consent withdrawn by subject	1	-
Lost to follow-up	3	-

---

**Notes:**

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: One subject from the 10Pn 7-11M Group was not included in the Booster Phase of the study for not having received the booster vaccination dose.

## Baseline characteristics

### Reporting groups

Reporting group title	10Pn <6M Group
Reporting group description:	
This group consisted of subjects up to 6 months of age at first vaccination who received 3 doses of 10Pn-PD-DiT (or 10Pn) vaccine co-administered with Infanrix <sup>TM</sup> IPV/Hib (DTPa-IPV/Hib) at 3, 4 and 5 months of age and a booster dose of the same vaccines at 12-15 months of age. Vaccines were administered intramuscularly in the right (10Pn-PD-DiT) or the left (DTPa-IPV/Hib) thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn 7-11M Group
Reporting group description:

## End points

### End points reporting groups

Reporting group title	10Pn <6M Group
Reporting group description: This group consisted of subjects up to 6 months of age at first vaccination who received 3 doses of 10Pn-PD-DiT (or 10Pn) vaccine co-administered with Infanrix <sup>TM</sup> IPV/Hib (DTPa-IPV/Hib) at 3, 4 and 5 months of age and a booster dose of the same vaccines at 12-15 months of age. Vaccines were administered intramuscularly in the right (10Pn-PD-DiT) or the left (DTPa-IPV/Hib) thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn 7-11M Group
Reporting group description: This group consisted of subjects 7 to 11 months of age at first vaccination who received 2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose one month later, and a booster dose at 12-15 months of age. The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn 12-23M Group
Reporting group description: This group consisted of subjects 12 to 23 months inclusive at first vaccination who received 2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose 2 months later. The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn >=24M Group
Reporting group description: This group consisted of subjects aged between 24 months (inclusive) to 5 years (inclusive) at vaccination who received one dose of 10Pn-PD-DiT (10Pn). The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn <6M Group
Reporting group description: This group consisted of subjects up to 6 months of age at first vaccination who received 3 doses of 10Pn-PD-DiT (or 10Pn) vaccine co-administered with Infanrix <sup>TM</sup> IPV/Hib (DTPa-IPV/Hib) at 3, 4 and 5 months of age and a booster dose of the same vaccines at 12-15 months of age. Vaccines were administered intramuscularly in the right (10Pn-PD-DiT) or the left (DTPa-IPV/Hib) thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	
Reporting group title	10Pn 7-11M Group
Reporting group description: This group consisted of subjects 7 to 11 months of age at first vaccination who received 2 doses of 10Pn-PD-DiT (10Pn), one first dose at enrolment followed by a second dose one month later, and a booster dose at 12-15 months of age. The 10PN-PD-DiT vaccine was administered intramuscularly in the right thigh or deltoid region (deltoid region only for children >12 months of age if muscle size was adequate).	

### Primary: Number of subjects with anti-pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F antibody concentrations >= 0.20 microgram per milliliter (µg/mL).

End point title	Number of subjects with anti-pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F antibody concentrations >= 0.20 microgram per milliliter (µg/mL). <sup>[1]</sup>
End point description: Anti-pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F antibody concentrations were assessed by 22F-inhibition Enzyme-Linked Immuno-Sorbent Assay (ELISA) method. The >=0.20 microgram per milliliter (microg/mL) cut-off corresponded to the seroprotection cut-off as regards anti-pneumococcal serotypes antibody concentrations. Seropositivity status, defined as anti-pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F antibody concentrations ≥ 0.05 microg/mL.	
End point type	Primary

---

End point timeframe:

At one month after primary (10Pn <6M & 10Pn 7-11M groups) or after the full (10Pn 12-23M & 10Pn >=24M groups) vaccination course with 10Pn, that is Month (M)3 for 10Pn <6M & 12-23M groups, M2 for 10Pn 7-11M Group, & M1 for 10Pn >=24M Group,

---

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Solicited & Unsolicited AEs: During the 4 & 31 days post PRI/BST vaccination; SAEs: during PRI and BST Phases. The occurrence of reported AEs (all/related) was not available and is encoded as equal to the number of subjects affected.

Adverse event reporting additional description:

Note that 1) SAEs for PRI Phase for 10Pn <6M & 10Pn 7-11M groups include SAEs reported up to BST dose not included; 2) BST Phase safety follow-up is not applicable to 10Pn 12-23M & 10Pn ≥24M groups; to mark this, numbers of subjects for BST events for these groups are marked as equal to 1.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 June 2006	The protocol was amended to clarify in the study title that the assessment of immunogenicity, safety and reactogenicity would be done in children older than 7 months of age and in children before 6 months of age. Furthermore, because the post-licensure surveillance of Prevenar in the United States had shown a decrease and an increase in invasive pneumococcal disease caused by the cross-reactive pneumococcal serotypes 6A and 19A, respectively, it was of interest to document the immune responses (Enzyme-Linked Immuno-Sorbent Assay [ELISA] and opsonophagocytic activity [OPA]) to these cross-reactive pneumococcal serotypes. Also a higher flexibility of the distribution of replacement vial/syringe for the 10Pn-PD-DiT vaccine at the study centres was allowed as in each group all the children would receive the same vaccine.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
