

Clinical trial results:

A multicenter, randomized, double-blind, placebo-controlled, parallel study to evaluate the efficacy and safety of brivaracetam used as adjunctive treatment for 12 weeks in adolescent and adult patients (≥ 16 years) with genetically ascertained Unverricht-Lundborg disease

Summary

EudraCT number	2006-001536-46

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 March 2008
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 January 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to compare the efficacy of Brivaracetam 5 and 150 mg/day in bid administration with Placebo, on the symptom relief of Action Myoclonus in patients with Unverricht-Lundborg disease (ULD).

Protection of trial subjects:

Standard safety measures to minimize pain and distress

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	07 November 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	10 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	Finland: 9
Country: Number of subjects enrolled	France: 8
Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	Russian Federation: 8
Country: Number of subjects enrolled	Serbia: 6
Country: Number of subjects enrolled	Tunisia: 5
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	56
EEA total number of subjects	17

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	2
Adults (18-64 years)	54
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

72 subjects were screened, 56 subjects were randomized.

Pre-assignment

Screening details:

Participant Flow refers to all subjects randomized who are identical with the Intent-To-Treat (ITT) Population, which consists of all randomized subjects who took at least one dose of study medication.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Placebo twice a day (bid), 14 weeks (2 week Up-Titration Period + 12 week Maintenance Period)

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Matching Placebo Tablets

Arm title	Brivaracetam 5 mg/day
------------------	-----------------------

Arm description:

Brivaracetam (BRV) 5 mg/day 2.5 mg twice a day (bid) using 2.5 mg tablets for 12 weeks (after 2 week Up- Titration Period)

Arm type	Experimental
Investigational medicinal product name	Brivaracetam
Investigational medicinal product code	BRV
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

BRV 5 mg: oral tablet of 2.5 mg

BRV 150 mg: oral tablet of 25 mg and 50 mg

Arm title	Brivaracetam 150 mg/day
------------------	-------------------------

Arm description:

Brivaracetam (BRV) 150 mg/day 75 mg twice a day (bid) using 25 mg and 50 mg tablets for 12 weeks (after 2 week Up-Titration Period)

Arm type	Experimental

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description: The first hypothesis for the primary efficacy variable compares placebo versus Brivaracetam (BRV) 150 mg/day. The second hypothesis for the primary efficacy variable compares placebo versus BRV 5 mg/day. However, this second hypothesis will only be tested when all the hypotheses for placebo versus BRV 150 mg/day are significant for the primary three UMRS related secondary endpoints.	

The hypotheses will be tested using nonparametric analysis. The study was designed to have 80 % power.

Comparison groups	Placebo v Brivaracetam 150 mg/day
Number of subjects included in analysis	36
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.942
Method	stratified Wilcoxon Test
Parameter estimate	Hodges-Lehmann-estimator of difference
Point estimate	0.15
Confidence interval	
level	95 %
sides	2-sided
lower limit	-26.12
upper limit	24.96

Notes:

[1] - All hypotheses are tested at the 5 % level. The multiplicity scheme (hierarchical testing procedure) assures strong control of the type I error at the 5 % level.

Statistical analysis title	Statistical Analysis 2
Comparison groups	Placebo v Brivaracetam 5 mg/day
Number of subjects included in analysis	38
Analysis specification	Pre-specified
Analysis type	superiority ^[2]
P-value	= 0.105
Method	stratified Wilcoxon Test
Parameter estimate	Hodges-Lehmann-estimator of difference
Point estimate	-18.05
Confidence interval	
level	95 %
sides	2-sided
lower limit	-39.31
upper limit	4.86

Notes:

[2] - Tested at the 5 % level - given the primary endpoint and the three UMRS related secondary endpoints comparing placebo versus Brivaracetam (BRV) 150 mg/day are significant at the 5 % level (hierarchical testing procedure).

Secondary: Percent change from Baseline to the end of Treatment Period on the Functional Disability Score (Unified Myoclonus Rating Scale (UMRS) Section 5)

End point title	Percent change from Baseline to the end of Treatment Period on the Functional Disability Score (Unified Myoclonus Rating Scale (UMRS) Section 5)
End point description:	
The range for Functional Disability Score is 0 (best) to 28 (worst). Percent change from Baseline = $100 \times ((\text{Baseline UMRS5} - \text{Treatment UMRS5}) / \text{Baseline UMRS5})$. Baseline is defined as the last non-missing value prior to or on Randomization Visit.	
End point type	Secondary
End point timeframe:	
Baseline to End of Treatment Period (Week 14 or Early Discontinuation Visit)	

End point values	Placebo	Brivaracetam 5 mg/day	Brivaracetam 150 mg/day	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	18	20	18

median (full range (min-max))				
median (full range)	0 (-380 to 53.8)	0 (-380 to 60)	0 (-85.7 to 75)	

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
If primary efficacy is proven for Brivaracetam (BRV) 150 mg/day, the following secondary endpoints will be tested for Placebo versus BRV 150 mg/day. The testing scheme will be hierarchical, thus statistical significance at 5 % on BRV 150 mg/day on a secondary endpoint is needed to continue testing BRV 150 mg/day at 5 % significance level for the next secondary endpoint.	
Comparison groups	Placebo v Brivaracetam 150 mg/day
Number of subjects included in analysis	36
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.672
Method	stratified Wilcoxon Test
Parameter estimate	Hodges-Lehmann-estimator of difference
Point estimate	1.24
Confidence interval	
level	95 %
sides	2-sided
lower limit	-21.9
upper limit	31.06

Notes:

[3] - Tested at the 5 % level - given the Primary Outcome testing Placebo versus BRV 150 mg/day is significant at the 5 % level (hierarchical testing procedure).

Statistical analysis title	Statistical Analysis 2
Statistical analysis description:	
In case the three endpoints are significant for placebo versus Brivaracetam (BRV) 150 mg/day, the primary endpoint will be tested for Placebo versus BRV 5 mg/day. In case of significance, the three UMRS related secondary endpoints will be tested for Placebo versus BRV 5 mg/day, provided the previous is significant at 5 %. Secondary endpoints are tested in the following order:	
<ul style="list-style-type: none"> - Functional Disability - Stimulus Sensitivity - Myoclonus Patient Questionnaire 	
Comparison groups	Placebo v Brivaracetam 5 mg/day

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) were collected from Visit 1 (Week -2) until final Visit 10 (Week 18).

Adverse event reporting additional description:

The Intent-To-Treat (ITT) population consists of all randomized subjects who took at least one dose of study medication.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 February 2007	Allowed two study visits (Visit 3 and Visit 8) to be performed by telephone, where appropriate.
20 March 2007	Adaptation of the hypothesis testing strategy for dealing with multiple endpoints and multiple doses. The sample size calculations assumptions were corrected. It was specified that the primary efficacy analysis will be performed adding in a covariate for the stratification factor used in the randomization process, and some adjustments and additions to the sensitivity analyses for the primary efficacy analysis were provided. Stimulus sensitivity was added to the secondary objectives. Inconsistency between secondary objectives and secondary endpoints was corrected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
