Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 March 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 November 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate and compare DFS from randomisation to the end of the study in high-risk subjects with resected stage III or IVa SCCHN treated with adjuvant placebo or lapatinib and chemoradiotherapy followed by maintenance placebo or lapatinib for 1 year.

Protection of trial subjects:

- Cardiac monitoring: an ECHO scan (or MUGA scan) was performed at screening, at the end of the CRT period and every 8 weeks during the maintenance phase. For subjects who had a decreased LEVF during the CRT and/or maintenance period, the ECHO or MUGA scans were performed in the follow-up period.
- Liver chemistry monitoring and follow-up criteria were implemented in order to follow up on any potential hepatobiliary disorders that may occur. Hepatic function was to be monitored every 4 weeks during treatment and stopping rules were defined for severe hepatic events.
- An IDMC (Independent Data Monitoring Committee) convened to review accumulating safety (every six months) and efficacy (DFS) (only at pre-planned interim, futility analysis) data and to provide an opportunity to terminate the study early in case of any concerns regarding safety and/or efficacy.
- Modification of the Timing of the primary analysis: with the plateauing of investigator observed DFS events, it was decided to conduct the primary analysis with fewer events than originally planned and to discontinue DFS assessments to reduce burden and exposure to invasive tests and scans for patients still in DFS follow-up. Upon approval of amendment 04, patients on DFS follow-up moved to survival follow-up.
- Regarding compliance and study medication administration, subjects were allowed to take tablets as a suspension, in recognition of the particular difficulty some patients affected by SCCHN and its treatment could experience in swallowing tablets.
- Diarrhea Management guidelines/ recommendation were provided to Investigators to help managing any potential diarrhea AE
- Radiotherapy (RT) Quality Assurance program: in order to standardize RT practice an independent vendor qualified each site, provided RT guidelines, and reviewed the RT plan for every subject.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 December 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Slovakia: 24
Country: Number of subjects enrolled	United Kingdom: 21
Country: Number of subjects enrolled	Austria: 15

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	611
From 65 to 84 years	77
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Study completion was not defined by the protocol; however participants (par.) were to be followed up until death or 5 years after randomization of the last par. The study was terminated less than 5 years after randomization of the last par. and therefore the number of completing par. reported here is equal to the number of par. who died.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo per oral monotherapy once daily (QD) for 1 week, followed by radiotherapy of 2 Gray (Gy) per day for 5 days per week (for a total dose of 66 Gy for up to 7 weeks). Participants received concurrent cisplatin 100 milligrams per meters squared (mg/m²) intravenously (IV) on Days 1, 22, and 43 of radiotherapy. One week prior to the start of chemoradiotherapy, then concurrently for 6 to approximately 7 weeks with chemoradiotherapy, participants received placebo per oral administration QD, followed by maintenance placebo per oral monotherapy QD for up to 1 year or until evidence of disease relapse, whichever was sooner.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 tablets daily (1500 mg per day) one hour before or one hour after the morning meal

Arm title	Lapatinib 1500 mg
------------------	-------------------

Arm description:

Participants received lapatinib 1500 mg per oral monotherapy QD for 1 week, followed by radiotherapy of 2 Gy per day for 5 days per week (for a total of 66 Gy for up to 7 weeks). Participants received concurrent cisplatin 100 mg/m² IV on Days 1, 22, and 43 of radiotherapy. One week prior to the start of chemoradiotherapy, then concurrently for 6 to approximately 7 weeks with chemoradiotherapy, participants received lapatinib 1500 mg per oral administration QD, followed by maintenance lapatinib 1500 mg per oral monotherapy QD for up to 1 year or until evidence of disease relapse, whichever was sooner.

Arm type	Experimental
Investigational medicinal product name	Lapatinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

6 tablets daily (1500 mg per day) one hour before or one hour after the morning meal

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Administered intravenously at a dose of 100mg/m² on approximately days 1, 22 and 43 of radiotherapy (approximately study days 8, 29 and 50). Standard hydration therapy and anti-emetic prophylaxis (including dexamethasone) will be administered as per institutional standard of care.

Number of subjects in period 1	Placebo	Lapatinib 1500 mg
Started	342	346
Completed	115	111
Not completed	227	235
Consent withdrawn by subject	34	38
Sponsor Terminated Study	161	167
Physician decision	3	7
Cognitive Disturbance	1	-
Fatigue	1	-
Non-compliance by Participants	1	-
Lost to follow-up	26	20
Disease Progression	-	2
Protocol deviation	-	1

Primary: Disease free survival (DFS)

End point title	Disease free survival (DFS)
-----------------	-----------------------------

End point description:

DFS is defined as the time from randomization until the earliest date of disease recurrence (evidence of local, regional, or distant disease progression, second primary tumor) or death due to any cause. Disease recurrence was based on the assessments from the blinded, independent reviewer (radiological and clinical). Par. who initiated alternative anti-cancer therapy prior to disease recurrence or death were treated as censored at the last assessment prior to the time of this initiation. For par. whose disease did not recur or who did not die, DFS was censored at the time of the last independently assessed radiological scan (where initiation of alternative anti-cancer therapy had not commenced). Par. who missed ≥ 2 consecutive disease assessments were censored at the last assessment prior to the missed assessments. Par. considered to have malignant disease at Baseline were censored at the time of randomization. 99999 represents NA - insufficient number of events to calculate value.

End point type	Primary
----------------	---------

End point timeframe:

From randomization until the earliest date of disease recurrence or death due to any cause (average of 101 study weeks)

End point values	Placebo	Lapatinib 1500 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	342 ^[1]	346 ^[2]		
Units: Months				
median (confidence interval 95%)	99999 (54.6 to 99999)	53.6 (45.8 to 99999)		

Notes:

[1] - Intent-to-Treat (ITT) Population: randomized par., irrespective of whether they received study med.

[2] - Intent-to-Treat (ITT) Population: randomized par., irrespective of whether they received study med.

Statistical analyses

Statistical analysis title	Analysis 1
Comparison groups	Placebo v Lapatinib 1500 mg
Number of subjects included in analysis	688
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.2251 ^[3]
Method	Non-stratified log-rank test

Notes:

[3] - The one-sided p-value is unstratified as there are too few events per stratum to perform a stratified test.

Statistical analysis title	Analysis 2
Comparison groups	Placebo v Lapatinib 1500 mg
Number of subjects included in analysis	688
Analysis specification	Pre-specified
Analysis type	superiority ^[4]
P-value	= 0.4502 ^[5]
Method	Non-stratified log-rank test
Parameter estimate	Hazard ratio (HR)
Point estimate	1.1

Statistical analyses

No statistical analyses for this end point

Secondary: Extent of exposure

End point title	Extent of exposure ^[16]
-----------------	------------------------------------

End point description:

Extent of exposure is defined as the duration of treatment administered during the study. The mean duration of treatment is calculated as the number of days between the start of treatment and the end of treatment inclusive (i.e., treatment stop date minus treatment start date + 1). Participants were counted in a treatment phase (monotherapy, chemoradiotherapy, and maintenance) if they had received any dose in that phase. Participants randomized to placebo who received ≥ 1 dose of lapatinib in error were included in the lapatinib arm. Safety Population (SP): all par. who were randomized and took ≥ 1 dose of study medication. Only par. available at the specified time points were analyzed (represented by $n=X$, X in the category titles). Different par. may have been analyzed for different parameters, so the overall number of par. analyzed reflects everyone in the SP.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization until end of 1year maintenance treatment (average of 63 study weeks)

Notes:

[16] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The safety population was taken as all participants who received one dose of medication. If a participant was randomized to the placebo arm and received any lapatinib in error, they were counted in the lapatinib arm in terms of safety endpoints. Five subjects randomized to receive placebo were given lapatinib, and 3 randomized subjects did not receive any study medication (2 lapatinib, 1 placebo). The Lapatinib 1500 mg containing the Safety population was used for this outcome measure.

End point values	Placebo	Lapatinib 1500 mg

Notes:

[20] - Safety Population

[21] - Safety Population

Statistical analyses

Secondary: Number of participants with the indicated chemistry toxicities by maximum toxicity grade (G3 and G4) at the worst-case on-therapy visit

End point title	Number of participants with the indicated chemistry toxicities by maximum toxicity grade (G3 and G4) at the worst-case on-therapy visit ^[22]
-----------------	---

End point description:

Data are summarized using the National Cancer Institute Common Terminology Criteria for Adverse Events, Version 3 (NCI CTC version 3.0) toxicity grades. Data are reported as the number of par. who had a grade 3 (G3) or grade 4 (G4) toxicity for the indicated chemistry parameters, where G3 indicates a severe toxicity and G4 indicates a life-threatening toxicity. Clinical chemistry parameters included: albumin, alkaline phosphatase (AP), alanine amino transferase (ALT), aspartate amino transeferase (AST), total bilirubin (TB), calcium, carbon dioxide content/bicarbonate (CO₂/HCO₃), creatinine, glucose, potassium, and sodium. The worst-case on-therapy visit includes any scheduled or unscheduled post-Baseline visit. Only those par. available at the specified time points were analyzed (represented by n=X, X in the category titles). Different par. may have been analyzed for different parameters, so the overall number of par. analyzed reflects everyone in the Safety Population.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (within 8 weeks prior to randomization [Day 1]) until the end of the maintenance period/early withdrawal (up to Study Week 64)

Notes:

[22] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The safety population was taken as all participants who received one dose of medication. If a participant was randomized to the placebo arm and received any lapatinib in error, they were counted in the lapatinib arm in terms of safety endpoints. Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with the indicated hematological toxicities by maximum toxicity grade (G3 and G4) at the worst-case on-therapy visit

End point title	Number of participants with the indicated hematological toxicities by maximum toxicity grade (G3 and G4) at the worst-case on-therapy visit ^[25]
-----------------	---

End point description:

Data are summarized using the NCI CTC version 3.0 toxicity grades. Data are reported as the number of participants who had a grade 3 (G3) or grade 4 (G4) toxicity for the indicated hematological parameters, where G3 indicates a severe toxicity and G4 indicates a life-threatening toxicity. The worst-case on-therapy visit includes any scheduled or unscheduled post-Baseline visit. Hematology parameter included: hemoglobin, total neutrophils (TN), platelet count (PC), and White Blood Cell (WBC) count. Only those participants available at the specified time points were analyzed (represented by n=X, X in the category titles). Different participants may have been analyzed for different parameters, so the overall number of participants analyzed reflects everyone in the Safety Population.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (within 8 weeks prior to randomization [Day 1]) until the end of the maintenance period/early withdrawal (up to Study Week 64)

Notes:

[25] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The safety population was taken as all participants who received one dose of medication. If a participant was randomized to the placebo arm and received any lapatinib in error, they were counted in the lapatinib arm in terms of safety endpoints. Five subjects randomized to receive placebo were given lapatinib, and 3 randomized subjects did not receive any study medication (2 lapatinib, 1 placebo). The Lapatinib 1500 mg containing the Safety population was used for this outcome measure.

End point values	Placebo	Lapatinib 1500 mg

Baseline (BL; within 8 weeks prior to randomization [Day 1]), End of CRT, Maintenance Week 56, Withdrawal from IP, and at any time Post-Baseline (up to Study Week 64)

Notes:

[43] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The safety population was taken as all participants who received one dose of medication. If a participant was randomized to the placebo arm and received any lapatinib in error, they were counted in the lapatinib arm in terms of safety endpoints. Five subjects randomized to receive placebo were given lapatinib, and 3 randomized subjects did not receive any study medication (2 lapatinib, 1 placebo). The Lapatinib 1500 mg containing the Safety population was used for this outcome measure.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with the indicated Eastern Cooperative Oncology Group (ECOG) performance status value

End point title	Number of participants with the indicated Eastern Cooperative Oncology Group (ECOG) performance status value ^[46]
-----------------	--

End point description:

The Eastern Cooperative Oncology Group (ECOG) performance status scales and grades/criteria are used by doctors and researchers to assess how a participant's disease is progressing, to assess how the disease affects the daily living abilities of the participant, and to determine appropriate treatment and prognosis. Grade 0, fully active, able to carry on all pre-disease performance without restriction. Grade 1, restricted in physically strenuous activity but ambulatory and able to carry out work of a light or sedentary nature, e.g., light house work, office work. Grade 2, ambulatory and capable of all selfcare, but unable to carry out any work activities; up and about more than 50% of waking hours. Grade 3, capable of only limited selfcare; confined to bed or chair more than 50% of waking hours. Grade 4, completely disabled; cannot carry on any selfcare; totally confined to bed or chair. Grade 5, dead.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (BL; within 8 weeks prior to randomization [Day 1]) until the end of the maintenance period/early withdrawal (up to Study Week 64)

Notes:

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in quality of life status as assessed by the Functional Assessment of Cancer Therapy-Head and Neck (FACT-H&N) questionnaire

End point title	Change from Baseline in quality of life status as assessed by the Functional Assessment of Cancer Therapy-Head and Neck (FACT-H&N) questionnaire
-----------------	--

End point description:

Change from Baseline (BL) in quality of life status was assessed using the FACT-H&N questionnaire, which is designed to measure multidimensional quality of life in participants with head and neck cancer. Change from Baseline was analyzed using parametric analysis of covariance (with the Baseline value as a covariate). The FACT-H&N questionnaire contains 39 items (27 general questions and 12 head and neck cancer-specific items) covering 4 dimensions and 1 subscale: physical well-being, social/family well-being, emotional well-being, functional well-being, and a head and neck cancer subscale. Possible subscale scores range from 0 to 36. Higher scores represent better quality of life. Data were adjusted for participant-reported quality of life scores at Baseline.

End point type	Secondary

Secondary: Change from Baseline in quality of life status as assessed by the EuroQol-5D (EQ-5D) scale

End point title	Change from Baseline in quality of life status as assessed by the EuroQol-5D (EQ-5D) scale
-----------------	--

End point description:

Change from Baseline in quality of life status was assessed using the EQ-5D scale, a 5-item health status measure and a visual analog rating scale. Change from Baseline was analyzed using parametric analysis of covariance (with the Baseline value as a covariate). The EQ-5D is a generic measure of self-reported health outcomes that is applicable to a wide range of health conditions and treatments. The EQ-5D covers health status in 5 domains (3 questions each): mobility, self-care, usual activities, pain or discomfort, and anxiety or depression. Each item is scored as follows: 1, no problems; 2, some moderate problems; 3, extreme problems. The possible EQ-5D index utility values range from 0.594 to 1, and the thermometer score ranges from 0 to 100. Higher scores represent better quality of life. Data were adjusted for participant-reported quality of life scores at Baseline.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of participants with the indicated worst-case on-therapy left ventricular ejection fraction (LVEF) change from Baseline

End point title	Number of participants with the indicated worst-case on-therapy left ventricular ejection fraction (LVEF) change from Baseline
-----------------	--

End point description:

LVEF is the measurement of how much blood is being pumped out of the left ventricle of the heart with each contraction. LVEF was assessed using echocardiogram (ECHO: a test of the action of the heart using ultrasound waves to produce a visual display, for the diagnosis or monitoring of heart disease) and multigated acquisition scans (MUGA scan: a noninvasive diagnostic test used to evaluate the pumping function of the ventricles). Data from the ECHO and MUGA scans were combined, and the absolute change from Baseline (Abs) data are presented according to the following categories: No change or any increase, 0-<10% decrease, 10-19% decrease, ≥20% decrease, ≥10% decrease and ≥the Lower Limit of Normal (LLN), ≥10% decrease and below LLN, ≥20% decrease and ≥LLN, or ≥20% decrease and below LLN. The relative percent change from Baseline (Rel) data are presented according to the following categories: ≥20% decrease and ≥LLN and ≥20% decrease and below LLN.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious adverse events (SAEs) and non-serious adverse events (AEs) were collected from the start of study medication until the follow up of treatment (average of 141 study weeks).

Adverse event reporting additional description:

SAEs and non-serious AEs were reported for members of the Safety Population, comprised of all participants who were randomized and took at least one dose of study medication. Participants randomized to placebo who received ≥ 1 dose of lapatinib in error were included in the lapatinib arm.

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received placebo per oral monotherapy once daily (QD) for 1 week, followed by radiotherapy of 2 Gray (Gy) per day for 5 days per week (for a total dose of 66 Gy for up to 7 weeks). Participants received concurrent cisplatin 100 milligrams per meters squared (mg/m^2) intravenously (IV) on Days 1, 22, and 43 of radiotherapy. One week prior to the start of chemoradiotherapy, then concurrently for 6 to approximately 7 weeks with chemoradiotherapy, participants received placebo per oral administration QD, followed by maintenance placebo per oral monotherapy QD for up to 1 year or until evidence of disease relapse, whichever was sooner.

Reporting group title	Lapatinib 1500 mg
-----------------------	-------------------

Reporting group description:

Oropharyngeal pain subjects affected / exposed occurrences (all)	67 / 336 (19.94%) 76	45 / 349 (12.89%) 51	
Productive cough subjects affected / exposed occurrences (all)	36 / 336 (10.71%) 36	25 / 349 (7.16%) 26	
Skin and subcutaneous tissue disorders			
Pruritus subjects affected / exposed occurrences (all)	9 / 336 (2.68%) 10	23 / 349 (6.59%) 26	
Rash subjects affected / exposed occurrences (all)	101 / 336 (30.06%) 133	167 / 349 (47.85%) 249	
Skin reaction subjects affected / exposed occurrences (all)	37 / 336 (11.01%) 37	41 / 349 (11.75%) 42	
Psychiatric disorders			
Insomnia subjects affected / exposed occurrences (all)	20 / 336 (5.95%) 23	17 / 349 (4.87%) 22	
Musculoskeletal and connective tissue disorders			
Musculoskeletal pain subjects affected / exposed occurrences (all)	23 / 336 (6.85%) 23	15 / 349 (4.30%) 15	
Neck pain subjects affected / exposed occurrences (all)	28 / 336 (8.33%) 31	20 / 349 (5.73%) 22	
Infections and infestations			
Oral candidiasis subjects affected / exposed occurrences (all)	22 / 336 (6.55%) 23	17 / 349 (4.87%) 17	
Metabolism and nutrition disorders			
Decreased appetite			

subjects affected / exposed	69 / 336 (20.54%)	62 / 349 (17.77%)	
occurrences (all)	86	78	
Hypokalaemia			
subjects affected / exposed	28 / 336 (8.33%)	42 / 349 (12.03%)	
occurrences (all)	33	57	
Hyponatraemia			
subjects affected / exposed	25 / 336 (7.44%)	33 / 349 (9.46%)	
occurrences (all)	28	42	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2006	<p>Amendment No. 1: To provide further clarification on:</p> <ul style="list-style-type: none">(1) Radiological assessments: frequency and type updated to reflect current clinical practice;(2) Addition of fiberoptic endoscopy procedure in the assessments updated to reflect current clinical practice;(3) Inclusion criteria modification to include subjects that express all levels of ErbB1 based on current scientific evidence and application of testing methods;(4) Stratification criteria updates to nodal status, geographical region and ErbB1 expression (tumour site unchanged).
07 July 2008	<p>Amendment No. 02: Global amendment to:</p> <p>Amend inclusion criteria to exclude subjects with a second primary tumour that has been resected at the same time as the original tumour.</p> <p>Exclusion criteria added to exclude patients with active hepatic disease.</p> <p>Add additional SAE definition, reporting criteria and follow-up assessments for hepatic toxicity.</p> <p>Add additional liver function assessments every 4 weeks</p> <p>Allow the use of carboplatin for subjects who cannot tolerate cisplatin (after consultation with the medical monitor).</p> <p>Clarify radiotherapy quality assurance process.</p> <p>Clarify CT/MRI scan requirements.</p> <p>Remove requirement for brain scan unless clinically indicated.</p> <p>Clarify screening windows and requirements for bone scan and panendoscopy procedures.</p> <p>Clarify the dose modifications required in the event of toxicities.</p> <p>Clarify the dose of concurrent dexamethasone allowed.</p> <p>Clarify the definition of the evaluable population.</p> <p>Clarify that all subjects will continue in the maintenance phase even if they may not qualify within the evaluable population.</p> <p>Remove the Serum EGFR assessments.</p> <p>Allow screening procedures to commence immediately following surgery.</p> <p>Allow a total screening window of 8 weeks between surgery and randomization, and, subsequently, a total 9 weeks window before starting lapatinib/placebo.</p> <p>Updates to statistical section; including a planned interim for futility following 50% of events, updated recruitment rates and clarification of the DFS endpoint.</p> <p>Amend frequency of survival calls to approximately every 6 months.</p> <p>Clarify the follow-up of patients until disease progression.</p> <p>Clarify the follow-up of patients when they withdraw from IP.</p> <p>Confirmation that patients will be followed-up for a maximum of 5 years after last patient has been randomised.</p> <p>General corrections and clarifications to protocol text, including the abbreviations, study schema, and time and events table.</p>
29 July 2008	<p>Amendment No. 2 - Inclusion of the updated version of the Radiotherapy Protocol in Appendix 7.</p>

20 July 2010	<p>Amendment No. 03: Global Amendment to:</p> <p>Update the Statistical section to: 1) Clarify the target patient accrual as 680; 2) Re-adjust the anticipated improvement in the DFS interval; 3) Increase the target number of DFS ITT events to 298; 4) Update the target number of events for non-binding interim analysis for futility.</p> <p>Remove the Radiotherapy Protocol from Appendix 7 and referenced now in the Study Procedures Manual.</p> <p>Updated prohibited medications list.</p> <p>General corrections and clarifications to protocol text, including the abbreviations, and time and events table.</p>
30 July 2010	<p>Amendment No. 03: Global Amendment to:</p> <p>Revised text within Appendix 7 – Amendment #3 'Main reason for change'.</p>
23 May 2013	<p>Amendment No.: 04</p> <p>Modified the timing for the primary analysis of the study (Rationale described in Section 1.2.4).</p> <p>Moved patients currently in DFS follow-up into OS follow-up, hence removing the requirement for radiological scans and endoscopies.</p> <p>Described the planned overall survival analyses (Section 8.3.5).</p> <p>Stop study follow-up in the event of a non-significant primary analysis of DFS.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
