Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 June 2008
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 November 2007
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that a booster dose of GSK Biologicals' 10-valent pneumococcal conjugate vaccine is non-inferior to Prevenar, both co-administered with DTPa-HBV-IPV/Hib vaccine, in terms of post-immunization febrile reactions with rectal fever > 39.0°C.

Criteria for safety:

Non-inferiority will be demonstrated if the upper limit of the 95% CI of the difference (10Pn-10Pn group minus 7Pn-7Pn group), in terms of percentage of subjects with rectal fever >39.0°C, is lower than 10%.

Protection of trial subjects:

All subjects were supervised after vaccination/product administration with appropriate medical treatment readily available. Vaccines/products were administered by qualified and trained personnel. Vaccines/products were administered only to eligible subjects that had no contraindications to any components of the vaccines/products. Towards ensuring the safety of subjects, the study design included an Active Primary Phase (Months 0-1) followed by an additional 5-months Extended Safety Follow-up Phase (ESFU (up to 6 months after the last vaccination/product administration during an). Prior to vaccination, subjects' pre-vaccination body temperature was also evaluated.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 September 2006
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	5 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 398
Country: Number of subjects enrolled	France: 142
Country: Number of subjects enrolled	Poland: 572
Worldwide total number of subjects	1112
EEA total number of subjects	1112

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	1112
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study consisted of approximately 1200 subjects who were previously enrolled and had been vaccinated with either the 10Pn or 7Pn vaccine as part of the 10PN-PD-DIT-001 (105553) study (EudraCTnumber: 2005-003300-11).

### Pre-assignment

Screening details:

During the screening the following was performed: informed consent was obtained and signed from parents or guardians of subjects, check for inclusion/exclusion criteria and contraindications/precautions was performed, and medical history of subjects was collected. Prior to vaccination, subjects' pre-vaccination body temperature was evaluated.

### Period 1

Period 1 title	Overall Study Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	10Pn-10Pn Group

Arm description:

This group consisted of subjects previously vaccinated with the 10Pn-PD-DiT vaccine (also referred as 10Pn vaccine or Synflorix™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 10Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 10Pn vaccine, injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.

Arm type	Experimental
Investigational medicinal product name	10 valent streptococcus pneumoniae conjugate vaccine
Investigational medicinal product code	
Other name	10Pn-PD-DiT, Synflorix™ (by GSK Biologicals)
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose administered at 12-18 months of age in the left thigh or deltoid

Investigational medicinal product name	DTPa-HBV-IPV/Hib
Investigational medicinal product code	
Other name	Infanrix hexa™ (by GSK Biologicals)
Pharmaceutical forms	Powder and solvent for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose administered at at 12-18 months of age in the right thigh or deltoid

<b>Arm title</b>	7Pn-7Pn Group
------------------	---------------

Arm description:

This group consisted of subjects previously vaccinated with the 7Pn vaccine (also referred as Prevenar™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 7Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the

right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 7Pn vaccine, injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.

Arm type	Active comparator
Investigational medicinal product name	7Pn
Investigational medicinal product code	
Other name	Prevenar™ by Wyeth Lederle Vaccines S.A.
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose administered at 12-18 months of age in the left thigh or deltoid

Investigational medicinal product name	DTPa-HBV-IPV/Hib
Investigational medicinal product code	
Other name	Infanrix hexa™ (by GSK Biologicals)
Pharmaceutical forms	Powder and solvent for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

One dose administered at at 12-18 months of age in the right thigh or deltoid

<b>Arm title</b>	7Pn-10Pn Group
------------------	----------------

Arm description:

This group consisted of subjects previously vaccinated with the 7Pn vaccine (also referred as Prevenar™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 7Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 10Pn-PD-DiT vaccine (also referred as 10Pn vaccine or Synflorix™), injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.

## Statistical analyses

Statistical analysis title	Non-inferiority of 10Pn vs 7Pn vaccine
----------------------------	--

Statistical analysis description:

Analysis aimed at demonstrating the non-inferiority of 10Pn vs 7Pn vaccine, both co-administered with DTPa-HBV-IPV/Hib vaccine, in terms of post-immunization febrile reactions with rectal fever > 39.0°C. Towards this, standardized asymptotic 95% confidence interval (CI) for the difference [10Pn-10Pn minus 7Pn-7Pn] in terms of percentages of subjects reporting rectal fever >39.0°C was computed.

Comparison groups	7Pn-7Pn Group v 10Pn-10Pn Group
Number of subjects included in analysis	826
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[2]</sup>
Parameter estimate	Difference in percentage
Point estimate	-4.43
Confidence interval	
level	95 %
sides	2-sided
lower limit	-11.85
upper limit	-0.21

Notes:

[2] - Non-inferiority was demonstrated if the upper limit of the computed standardized asymptotic 95% CI was lower than the pre-defined limit of 10%.

## Secondary: Number of subjects with any and Grade 3 solicited local symptoms

End point title	Number of subjects with any and Grade 3 solicited local symptoms
-----------------	--

End point description:

Solicited local symptoms assessed include pain, redness and swelling. Grade 3 pain was defined as crying when limb was moved/spontaneously painful. Grade 3 swelling/redness was defined as swelling/redness larger than (>) 30 millimeters (mm). "Any" is defined as incidence of the specified symptom regardless of intensity. The analysis was performed on the Total vaccinated cohort, which included all subjects vaccinated in this study 10PN-PD-DIT-007, solely on subjects with results available.

End point type	Secondary

-----------------	--

End point description:

A seroprotected subject as regards anti-pneumococcal serotype antibody was defined as a subject with anti-pneumococcal serotype antibody concentration above than or equal to ( $\geq$ ) 0.20 microgram per millilitre ( $\mu\text{g/mL}$ ). Anti-pneumococcal serotypes antibodies assessed were antibodies against pneumococcal serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F (Anti-1, -4, -5, -6B, -7F, 9V, -14, -18C, -19F and -23F). Analysis was performed using the 22F-inhibition Enzyme-linked immunosorbent assay (ELISA), using  $\geq 0.05 \mu\text{g/mL}$  as seropositivity cut off. For this endpoint, the analysis was performed on the according-to-protocol cohort for immunogenicity, e. a., evaluable subjects for whom assay results were available for antibodies against at least one study vaccine antigen component after booster vaccination.

Anti-HBs, Month 1 (N=325;47;132)	3869.1 (3218.1 to 4651.8)	3132.2 (1906.3 to 5146.5)	4358.6 (3495.5 to 5434.8)	

## Statistical analyses

No statistical analyses for this end point

## Secondary: Anti-polio type 1, 2 and 3 (Anti-Polio 1, 2 and 3) antibody titers

End point title	Anti-polio type 1, 2 and 3 (Anti-Polio 1, 2 and 3) antibody titers
-----------------	--

End point description:

Anti-Polio 1, 2 and 3 antibody titers were calculated, expressed as geometric mean titers (GMTs) and tabulated. The seroprotection cut-off for the assay was  $\geq 8$ . Antibody titers below the cut-off of the assay were given an arbitrary value of half the cut-off for the purpose of GMT calculation. For this endpoint, the analysis was performed on the according-to-protocol cohort for immunogenicity, e. a., evaluable subjects for whom assay results were available for antibodies against at least one study vaccine antigen component after booster vaccination.

End point type	Secondary

No statistical analyses for this end point

### Secondary: Number of subjects booster (BST) responder to pertussis toxoid (PT), filamentous haemagglutinin (FHA) and pertactin antigens

End point title	Number of subjects booster (BST) responder to pertussis toxoid (PT), filamentous haemagglutinin (FHA) and pertactin antigens
-----------------	--

End point description:

A BST responder to PT, FHA and PRN antigens was defined as a subject with the appearance of antibodies in subjects who were seronegative prior to the booster vaccination or at least 2-fold increase of pre-booster vaccination antibody concentrations in subjects who were seropositive prior to the booster vaccination. A seropositive/seronegative subject as regards Anti-PT/-FHA/ -PRN antibodies was defined as a subject with anti-PT/-FHA/ -PRN antibody concentrations  $\geq 5$  Enzyme-linked Immunosorbent assay (ELISA) unit per milli-liter (EL.U/mL)

End point type	Secondary
End point timeframe:	
One month (Month 1) post booster vaccination

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Solicited local and general symptoms: During the 4 days post booster; Unsolicited AEs: During the 31 days post booster; SAEs: From Month 0 prior to booster vaccination up to Month 6, end of the extended safety follow-up in this study 10PN-PD-DIT-007

Adverse event reporting additional description:

The occurrence of reported AEs (all/related) was not available and is encoded as equal to the number of subjects affected.

Assessment type	Non-systematic

### Reporting groups

Reporting group title	10Pn-10Pn Group
-----------------------	-----------------

Reporting group description:

This group consisted of subjects previously vaccinated with the 10Pn-PD-DiT vaccine (also referred as 10Pn vaccine or Synflorix™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 10Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 10Pn vaccine, injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.

Reporting group title	7Pn-10Pn Group
-----------------------	----------------

Reporting group description:

This group consisted of subjects previously vaccinated with the 7Pn vaccine (also referred as Prevenar™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 7Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 10Pn-PD-DiT vaccine (also referred as 10Pn vaccine or Synflorix™), injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.

Reporting group title	7Pn-7Pn Group
-----------------------	---------------

Reporting group description:

This group consisted of subjects previously vaccinated with the 7Pn vaccine (also referred as Prevenar™) as part of a previous study by GSK Biologicals – the 10PN-PD-DIT-001 (105553) study (EuDRA-CT number: 2005-003300-11). As part of the 105553 study, subjects had received a 3-dose primary vaccination of 7Pn vaccine at 2, 3 and 4 months of age (injected intramuscularly [IM] in the right thigh) co-administered with DTPa-HBV-IPV/Hib vaccine (or Infanrix hexa™), except for the second dose in France, which was co-administered with DTPa-IPV/Hib (or Infanrix™ IPV Hib), injected intramuscularly in the left thigh. As part of this study, at 12-18 months of age, subjects received a booster dose of 7Pn vaccine, injected IM in the right thigh or deltoid, co-administered with DTPa-HBV-IPV/Hib vaccine, injected IM in the left thigh or deltoid.
