Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 June 2008
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 June 2008
Global end of trial reached?	Yes
Global end of trial date	23 June 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial was to assess the safety and immunogenicity of a booster dose of hepatitis B vaccine in children who have received a 3-dose primary series of either RECOMBIVAX HB™ vaccine or ENGERIX-B™ vaccine. The primary vaccination series was given 4 to 8 years prior to study entry and consisted of a licensed hepatitis B vaccine product (either RECOMBIVAX HB™ vaccine or ENGERIX-B™ vaccine). The booster dose given in this study was either an investigational Merck product (Modified Process Hepatitis B Vaccine) or licensed ENGERIX-B™ vaccine.

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 September 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 20
Country: Number of subjects enrolled	Spain: 1458
Worldwide total number of subjects	1478
EEA total number of subjects	1458

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	1478
Adolescents (12-17 years)	0
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 77 primary study sites in Spain and 1 study site in Canada. Date of first participant visit: 26-Sep-2006; Date of last participant visit: 23-June-2008

Pre-assignment

Screening details:

To be eligible for enrollment in the study, participants must have received a primary series of 3 doses of hepatitis B vaccine (either RECOMBIVAX HB™ vaccine or ENGERIX-B™ vaccine) during the first year of life.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	V232 Vaccine Booster (RECOMBIVAX HB™ in infancy) (Group 1)

Arm description:

Participants received a primary series of 3 doses of RECOMBIVAX HB™ vaccine (5 µg per dose) during the first year of life outside of the context of the study. On Day 1 of the study, participants received one dose of Modified Process Hepatitis B Vaccine (V232, 5 µg (Booster Dose))

Arm type	Experimental
Investigational medicinal product name	V232 Vaccine (Modified Process Hepatitis B Vaccine Booster)
Investigational medicinal product code	
Other name	V232
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

5 µg/0.5 mL, intramuscular

Arm title	ENGERIX-B™ Booster (RECOMBIVAX HB™ in infancy) (Group 2)
------------------	--

Arm description:

Participants received a primary series of 3 doses of RECOMBIVAX HB™ vaccine (5 µg per dose) during the first year of life outside of the context of the study. On Day 1 of the study, participants received one dose of ENGERIX-B™ vaccine (10 µg per dose) (Booster Dose)

Arm type	Active comparator
Investigational medicinal product name	ENGERIX-B™ Vaccine Booster
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

10 µg/0.5 mL, intramuscular

Arm title	V232 Vaccine Booster (ENGERIX-B™ in infancy) (Group 3)
------------------	--

Arm description:

Participants received a primary series of 3 doses of ENGERIX-B™ vaccine (10 µg per dose) during the first year of life outside of the context of the study. On Day 1 of the study, participants received one dose of Modified Process Hepatitis B Vaccine (V232, 5 µg (Booster Dose))

Arm type	Experimental
----------	--------------

Investigational medicinal product name	V232 Vaccine (Modified Process Hepatitis B Vaccine Booster)
Investigational medicinal product code	
Other name	V232
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details: 5 µg/0.5 mL, intramuscular	
Arm title	ENGERIX-B™ Booster (ENGERIX-B™ in infancy) (Group 4)

Arm description:

Participants received a primary series of 3 doses of ENGERIX-B™ vaccine (10 µg per dose) during the first year of life outside of the context of the study. On Day 1 of the study, participants received one dose of ENGERIX-B™ vaccine (10 µg per dose) (Booster Dose)

Arm type	Active comparator
Investigational medicinal product name	ENGERIX-B™ Vaccine Booster
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use
Dosage and administration details: 10 µg/0.5 mL, intramuscular	
Arm title	V232 Vaccine (no prior Hepatitis B vaccine) (Group 5)

Arm description:

Participants did not receive a prior vaccination with a hepatitis B vaccine. On Day 1 of the study, participants received one dose of Modified Process Hepatitis B Vaccine (V232), 5 µg.

Arm type	Experimental
Investigational medicinal product name	V232 Vaccine (Modified Process Hepatitis B Vaccine)
Investigational medicinal product code	
Other name	V232
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

5 µg/0.5 mL, intramuscular

Primary: Participants With an Antibody Response to Hepatitis B Surface Antigen in Participants Who Received a 3-dose Primary Series of RECOMBIVAX HB™ in Infancy

End point title	Participants With an Antibody Response to Hepatitis B Surface Antigen in Participants Who Received a 3-dose Primary Series of RECOMBIVAX HB™ in Infancy ^{[1][2]}
End point description: Participants who received a 3-dose primary series of RECOMBIVAX HB™ in infancy and who demonstrated antibodies to hepatitis B surface antigen ≥10 mIU/mL at 1 month after receiving a booster dose of modified process hepatitis B vaccine or ENGRIX-B™. Per protocol population was defined as the participants that completed the study as defined by the protocol. Participants were excluded from the analysis population mainly because they did not receive the primary series vaccination series as defined in the protocol or the study vaccine was not maintained at proper temperature as defined in the protocol.	
End point type	Primary

End point timeframe:

4 weeks (1 month) after booster dose

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned or performed for this endpoint.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical analysis was planned or performed for this endpoint.

Primary: Seroprotection rate (SPR) to Hepatitis B Surface Antigen in Participants Who Received a 3-dose Primary Series of RECOMBIVAX HB™ in Infancy

End point title	Seroprotection rate (SPR) to Hepatitis B Surface Antigen in Participants Who Received a 3-dose Primary Series of RECOMBIVAX HB™ in Infancy ^{[3][4]}
-----------------	--

End point description:

Participants received a 3-dose primary series of RECOMBIVAX HB™ in infancy. Seroprotection rate (SPR) was defined as the percentage of participants who demonstrated antibodies to hepatitis B surface antigen ≥ 10 mIU/mL at 1 month after receiving a booster dose of modified process hepatitis B vaccine or ENGRIX-B™. The statistical criterion for an adequate SPR required the lower bound of the 2-sided multiplicity adjusted 95.2% confidence interval for the anti-HBs SPR 4 weeks after the booster dose for participants to be greater than 90%. Per protocol population was defined as the participants that completed the study as defined by the protocol. Participants were excluded from the analysis population mainly because they did not receive the primary series vaccination series as defined in the protocol or the study vaccine was not maintained at proper temperature as defined in the protocol.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 September 2006	AM1 - The protocol was amended to include only participants who received the primary series of hepatitis B vaccine through the birth, 1, and 6 months of age and birth, 2, and 6 months of age schedules for Cohorts A and B. Additionally, this amendment clarified that participants in Cohort C were to be enrolled in Canada or other countries, as needed, and that the study design was changed from single-blind to open-label for Cohorts A and B.
25 July 2007	AM2 - The protocol was amended to include healthy male and female children 4 to 7 years of age and born between 2000 and 2002.
01 November 2007	AM3 - The protocol was amended to include healthy male and female children 4 to 8 years of age and born between 2000 and 2003.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
