

Clinical trial results:

Estudio de Fase I/II de HKI-272 en combinación con trastuzumab (Herceptin) en sujetos con cáncer de mama avanzado.

A Phase I/II Study of HKI-272 in Combination With Trastuzumab (Herceptin) in Subjects With Advanced Breast Cancer.

Summary

EudraCT number	2006-003215-52
Trial protocol	ES FR
Global end of trial date	23 May 2018

Results information

Result version number	v2 (current)
This version publication date	22 May 2019
First version publication date	01 January 2017
Version creation reason	• New data added to full data set Update to reflect final study close out.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 May 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 May 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary objectives:

Part 1: To assess the safety and tolerability, and to define the MTD of orally administered HKI-272 in combination with trastuzumab in subjects with advanced breast cancer.

Part 2: To determine the 16 week progression free survival (PFS) rate for subjects with advanced breast cancer treated at the MTD with HKI-272 and trastuzumab.

Protection of trial subjects:

Study commencement required prior written approval of a properly constituted Institutional Review Board (IRB) or Independent Ethics Committee (IEC). Clinical trial data were monitored at regular intervals by the Sponsor or their representative throughout the study to verify compliance to study protocol, completeness, accuracy and consistency of the data and adherence to local regulations on the conduct of clinical research. Patients were discontinued from active treatment phase of the study for any of the following reasons, but not limited to: documented disease progression, adverse event, symptomatic deterioration, subject request, investigator request (with detailed documentation of reasoning), protocol violation, discontinuation of the study by the sponsor, lost to follow-up, or death. Subjects were discontinued or withdrawn from the study for any of the following reasons: subject request, lost to follow up, protocol violation, discontinuation of the study by the sponsor, or death.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 February 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	United States: 16
Country: Number of subjects enrolled	Switzerland: 4
Country: Number of subjects enrolled	China: 20
Worldwide total number of subjects	45
EEA total number of subjects	5

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	39
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

All advertising, recruitment, and other written information provided to the subject had to have been approved by the IRB/IEC.

Pre-assignment

Screening details:

Patients were screened to evaluate any inclusion/exclusion criteria and were assigned to receive trastuzumab in combination Neratinib 160 mg or 240 mg in Part 1, and then the maximum tolerated dose, as determined in Part 1 of the study, in Part 2.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Part 1 Ner160 + Trastuzumab

Arm description:

Part 1, dose-escalation phase. Neratinib 160 mg in combination with trastuzumab 4 mg/kg loading and then 2 mg/kg every week after.

Arm type	Experimental
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib 160 mg was administered orally, preferably with a meal and in the morning. On the days when both neratinib and trastuzumab were administered, neratinib was taken within 30 minutes after the end of the trastuzumab infusion.

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab was administered as an IV infusion over 90 minutes at the dose of 4 mg/kg, followed by a weekly dose of 2 mg/kg administered over 30 minutes.

Arm title	Part 1 Ner240 + Trastuzumab
------------------	-----------------------------

Arm description:

Part 1, dose-escalation phase. Neratinib 240 mg in combination with trastuzumab 4 mg/kg loading and then 2 mg/kg every week after.

Arm type	Experimental
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib 240 mg was administered orally, preferably with a meal and in the morning. On the days when both neratinib and trastuzumab were administered, neratinib was taken within 30 minutes after the end of the trastuzumab infusion.

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab was administered as an IV infusion over 90 minutes at the dose of 4 mg/kg, followed by a weekly dose of 2 mg/kg administered over 30 minutes.

Arm title	Part 2 Ner240 + Trastuzumab
------------------	-----------------------------

Arm description:

Part 2 of study. Neratinib 240 mg in combination with Trastuzumab.

Arm type	Experimental
Investigational medicinal product name	Neratinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Neratinib 240 mg was administered orally, preferably with a meal and in the morning. On the days when both neratinib and trastuzumab were administered, neratinib was taken within 30 minutes after the end of the trastuzumab infusion.

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Trastuzumab was administered as an IV infusion over 90 minutes at the dose of 4 mg/kg, followed by a weekly dose of 2 mg/kg administered over 30 minutes.

Number of subjects in period 1	Part 1 Ner160 + Trastuzumab	Part 1 Ner240 + Trastuzumab	Part 2 Ner240 + Trastuzumab
Started	4	4	37
Completed	0	0	0
Not completed	4	4	37
Consent withdrawn by subject	1	-	4

Primary: Number of Patients with Dose Limiting Toxicity

End point title	Number of Patients with Dose Limiting Toxicity ^{[1][2]}
End point description: In part 1, the dose-escalation phase, 3 to 6 subjects were to be enrolled in each dose group. Enrollment at the next dose level began when all evaluable subjects at the first dose level were evaluated for 21 days after the first dose of test article. Additional subjects could be included at any dose level to further assess the safety and tolerability at that dose level. In part 1, subjects who withdrew from the study and were not considered evaluable could be replaced. DLTs were assessed from the administration of the first dose of test article through day 21, and were defined as any test article-related grade 2 or grade 3 diarrhea lasting >2 days despite optimal medical therapy, or diarrhea associated with fever or dehydration, grade 3 or grade 4 nonhematologic toxicity, grade 4 hematologic toxicity, or symptomatic congestive heart failure (CHF), confirmed by a cardiology assessment.	
End point type	Primary
End point timeframe: From first dose date through 21 days after dose.	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The number of patients with Dose Limiting Toxicity were analyzed in each of the two arms in Part 1 of the study and they were analyzed separated. There were no comparisons or analyses to be made between the two arms. [2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Number of Patients with Dose Limiting Toxicity was analyzed only in Part 1 of the study.	

End point values	Part 1 Ner160 + Trastuzumab	Part 1 Ner240 + Trastuzumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	4	4		
Units: Patients				
number (not applicable)	0	0		

Statistical analyses

No statistical analyses for this end point

Primary: 16-Week Progression-Free Survival Rate

End point title	16-Week Progression-Free Survival Rate ^{[3][4]}
-----------------	--

End point description:

Sixteen (16) week PFS rate: the estimated proportion of evaluable subjects who are alive and progression-free 16 weeks after the first dose of test article. The evaluable population was defined as the subjects who met the eligibility criteria for study enrollment, received at least 1 week of neratinib and at least 2 doses of trastuzumab, and had a baseline tumor assessment and at least 1 follow-up tumor assessment approximately 8 weeks after starting test article administration.

End point type	Primary
----------------	---------

End point timeframe:

From the date of first dose through Week 16.

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This 16-Week Progression-Free Survival Rate was computed for Part 2 of the study and there were no comparisons to be made. The rate and the corresponding 95% CI were estimated using the Kaplan-Meier method.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: 16-Week Progression-Free Survival Rate was analyzed only in Part 2 of the study.

End point values	Part 2 Ner240 + Trastuzumab			
Subject group type	Reporting group			
Number of subjects analysed	28			
Units: percent				
number (confidence interval 95%)	44.8 (25.9 to 62.1)			

Statistical analyses

No statistical analyses for this end point

Secondary: Progression-Free Survival

End point title	Progression-Free Survival ^[5]
-----------------	--

End point description:

The time to tumor progression is the interval from the date of the first dose of test article to the first date on which any of the following criteria are met: 1. Documented PD per modified RECIST criteria as described above. 2. Early determination of PD status in the opinion of the investigator, in the absence of measurement data. 3. Discontinuation of test article due to symptomatic deterioration, or death due to any cause. The date of the last dose of test article will be considered the date of progression. Subjects who do not meet the above criteria for progression will be censored at the last valid post-screening tumor assessment. Valid tumor assessment is defined as an assessment where overall response includes either CR or PR or SD. Subjects who do not have a post-screening tumor assessment will be censored at the date of first dose of test article. Median PFS estimated by Kaplan-Meier method is reported.

End point type	Secondary
----------------	-----------

End point timeframe:

Interval from the first dose date of test article until the first date on which recurrence or progression, or death due to any cause, is documented, censored at the last tumor assessment date.

Notes:

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Progression-Free Survival was analyzed only in Part 2 of the study.

End point values	Part 2 Ner240 + Trastuzumab			
Subject group type	Reporting group			
Number of subjects analysed	28			
Units: Weeks				
number (confidence interval 95%)	15.9 (15.1 to 31.3)			

Statistical analyses

No statistical analyses for this end point

Secondary: Objective Response Rate

End point title	Objective Response Rate ^[6]
-----------------	--

End point description:

Percent of subjects achieving a complete or partial response. Complete and partial responses must be confirmed by 2 observations not less than 4 weeks apart.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 of study through the last assessment.

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Objective Response Rate was analyzed only in Part 2 of the study.

End point values	Part 2 Ner240 + Trastuzumab			
Subject group type	Reporting group			
Number of subjects analysed	28			
Units: Percentage				
number (confidence interval 95%)	28.6 (13.2 to 48.7)			

Statistical analyses

No statistical analyses for this end point

Secondary: Clinical Benefit Rate

End point title	Clinical Benefit Rate ^[7]
-----------------	--------------------------------------

End point description:

Proportion of subjects demonstrating CR, PR, or duration of SD for at least 24 weeks

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose to last tumor assessment.

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Clinical Benefit Rate was analyzed only in Part 2 of the study.

End point values	Part 2 Ner240 + Trastuzumab			
Subject group type	Reporting group			
Number of subjects analysed	28

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 June 2007	This amendment included a smaller part 2, with 30 subjects enrolled at maximum tolerated dose, and updates to the eligibility criteria.
13 September 2007	This amendment clarified that certain standard procedures do not need to be repeated for the purposes of determining eligibility if done within the screening window, and that for final visit, if LVEF was assessed within the previous 8 weeks, it does not need to be repeated at the final visit.
19 May 2008	This amendment specified that subjects may receive more than 12 months of treatment if treatment was well tolerated, if the disease has not progressed, if the subject is clinically stable, and if the subject has received the overall benefit from the treatment according to the investigator's judgement. Subject continuation will be discussed with the Sponsor. Study procedures for any visits beyond 12 months will be the same as months 3-12 with the exception of pharmacokinetics.
22 March 2012	This amendment changed the Sponsor to Puma and included a Treatment Extension Period, which allowed patients who still derived benefit from study participation to remain on the study and enabled the Sponsor to continue to provide investigational product (IP) to the patients after the primary objectives had been reached. During the Treatment Extension Period, the required procedures were limited to IP administration and monitoring for safety and tolerability; adverse events (AEs) and serious adverse events (SAEs) were documented, but no efficacy data were collected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data reported in Addendum and Final Report for 3 patients followed after database lock are consistent with safety conclusions presented in iCSR and ISR and do not impact known safety profile of neratinib in combination with trastuzumab.

Notes:
