Clinical trial results:
Open-label multi-center study of magnetic resonance imaging (MRI) with 0.1 mmol/kg BW Gadovist (1.0 M) to assess pharmacokinetics, safety and tolerability in children

Summary

EudraCT number	2006-004153-22
Trial protocol	DE SE DK AT
Global end of trial date	16 April 2008

Results information

Result version number	v2 (current)
This version publication date	24 July 2016
First version publication date	04 July 2015
Version creation reason	• Correction of full data set Review of results set after re-introduction of EudraCT

Trial information

Trial identification

Sponsor protocol code	BAY86-4875/91552

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00468819
WHO universal trial number (UTN)	-
Other trial identifiers	Study number: 310788

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMEA-000994-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2008
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 April 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate pharmacokinetic (PK) parameters of Gadovist in plasma at the standard dose of 0.1 millimoles per kilogram (mmol/kg) body weight (BW) in children of different age.

Protection of trial subjects:

The planning and conduct of this clinical study was subject to national laws. Only when all of the requirements of the appropriate regulatory authority had been fulfilled was the study to begin. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization (ICH)-Good Clinical Practice Guideline of 17 January 1997 and guidance dedicated to performance of clinical trials in children (ICH-E11) was also taken into account. For minors, consent was given by the parent(s) or legal guardian(s). The consent of a minor was also requested where such a person was able to do so. His / her refusal or the withdrawal of his / her consent was not disregarded. Adolescents 14 years or older were required to document their assent either on a separate form specifically made for children or on the parents‘ consent form. Younger children could document their assent whenever feasible (at the discretion of the investigator/pediatrician).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 May 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Sweden: 8
Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	Germany: 114
Worldwide total number of subjects	138
EEA total number of subjects	128

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	90
Adolescents (12-17 years)	48
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 140 pediatric subjects aged 2 to less than 18 years, scheduled to undergo a routine contrast-enhanced magnetic resonance imaging (MRI) examination were screened and enrolled in 14 recruiting centers in 4 countries: Austria (1 center), Canada (2 centers), Germany (8 centers), and Sweden (3 centers).

Pre-assignment

Screening details:

Of 140 screened subjects, a total of 138 subjects were treated with study drug and completed the administration of the study drug according to protocol.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Gadobutrol - Age 2 to 6 Years

Arm description:

Subjects in the age range of 2 to 6 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 milliliter per kilogram (mL/kg) BW as single intravenous bolus injection.

Arm type	Experimental
Investigational medicinal product name	Gadobutrol
Investigational medicinal product code	BAY86-4875
Other name	Gadavist, Gadovist
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Arm title	Gadobutrol - Age 7 to 11 Years

Arm description:

Subjects in the age range of 7 to 11 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Arm type	Experimental
Investigational medicinal product name	Gadobutrol
Investigational medicinal product code	BAY86-4875
Other name	Gadavist, Gadovist
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Arm title	Gadobutrol - Age 12 to 17 Years

Arm description:

Subjects in the age range of 12 to 17 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Arm type	Experimental

Investigational medicinal product name	Gadobutrol
Investigational medicinal product code	BAY86-4875
Other name	Gadavist, Gadovist
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Arm title	Gadobutrol - Age 2 to 17 Years

Arm description:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection. This reporting group consists of the overall study population aged 2 to 17 years which is the sum of all the above 3 reporting groups ("Gadobutrol - Age 2 to 6 Years"+"Gadobutrol - Age 7 to 11 Years"+"Gadobutrol - Age 12 to 17 years").

Arm type	Experimental
Investigational medicinal product name	Gadobutrol
Investigational medicinal product code	BAY86-4875
Other name	Gadavist, Gadovist
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Number of subjects in period 1	Gadobutrol - Age 2 to 6 Years	Gadobutrol - Age 7 to 11 Years	Gadobutrol - Age 12 to 17 Years

Subject analysis set title	Full analysis set (FAS)
Subject analysis set type	Full analysis
Subject analysis set description:	
FAS (number of subjects=138) included all subjects who received any amount of the investigational product.	
Subject analysis set title	Final Pharmacokinetic (PK) analysis set
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
The pharmacokinetic analysis was performed based on the per protocol set (PPS). The PPS (number of subjects=135) consisted of all subjects who completed the necessary study procedures for determination of pharmacokinetic variables, who received the appropriate dose of Gadovist, and who had no major protocol deviations. Based on the results of gadolinium concentration measurement, additional 5 patients had to be excluded from PPS due to major deviations relevant for PK analysis. Therefore, a final PK analysis set was defined with a total of 130 subjects.	
Subject analysis set title	Urinary analysis set
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
Urinary analysis set (number of subjects=97) included all subjects those valid for urinary analysis.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Immediately after injection up to 7 days post injection

Adverse event reporting additional description:

As assessed by the investigators, 10 of the 74 adverse events recorded were related to administration of Gadobutrol and 3 of these, that is, crystal urine, pneumonia and meningitis (1.4%) were assessed as serious.

Assessment type	Non-systematic

Dictionary used

Dictionary name	MedDRA

Reporting groups

Reporting group title	Gadobutrol - Age 2 to 6 Years

Reporting group description:

Subjects in the age range of 2 to 6 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Reporting group title	Gadobutrol - Age 7 to 11 Years

Reporting group description:

Subjects in the age range of 7 to 11 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Reporting group title	Gadobutrol - Age 12 to 17 Years

Reporting group description:

Subjects in the age range of 12 to 17 years, received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection.

Reporting group title	Gadobutrol - Age 2 to 17 Years

Reporting group description:

Subjects received Gadobutrol 0.1 mmol/kg BW = 0.1 mL/kg BW as single intravenous bolus injection. This reporting group consists of the overall study population aged 2 to 17 years which is the sum of all the above 3 reporting groups ("Gadobutrol - Age 2 to 6 Years"+"Gadobutrol - Age 7 to 11 Years"+"Gadobutrol - Age 12 to 17 Years").

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 June 2007	Rationale for the amendment was that in compliance with additional recommendations made on 27 March 2007 by The German Federal Institute for Drugs and Medical Devices (BfArM), the sections referring to the urine collection in children needed to be amended. The BfArM recommended that the urine collection should not only be performed in children aged at least 9 years but also in capable younger children. Provided that the children/parents were cooperating and that no additional strain was put on the children, it had to be endeavored to also gain data about the gadobutrol urine excretion in younger children - even in the youngest age group (2-6 years), if feasible.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Originally, urine was collected up to 6 hours post injection in subjects >9 years. This was amended to subjects of all age groups. As a result, urine was collected in 102 of 138 subjects with gadobutrol injection (lowest rate in subjects 2-6 years).
