

## Clinical trial results:

### An Open-label Prospective Trial to Explore the Tolerability, Safety and Efficacy of Flexibly Dosed Paliperidone ER in Subjects With Schizophrenia

#### Summary

EudraCT number	2006-004265-34
Trial protocol	LT DE FR IT BE
Global end of trial date	04 March 2020

#### Results information

Result version number	v1 (current)
This version publication date	14 March 2021
First version publication date	14 March 2021

#### Trial information

##### Trial identification

Sponsor protocol code	R076477SCH3017
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00460512
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen-Cilag International N.V.
Sponsor organisation address	Turnhoutseweg 30, Beerse, Belgium, B-2340
Public contact	Clinical Registry Group, Janssen-Cilag International N.V., ClinicalTrialsEU@its.jnj.com
Scientific contact	Clinical Registry Group, Janssen-Cilag International N.V., ClinicalTrialsEU@its.jnj.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 March 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 March 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to explore the efficacy, based on total positive and negative syndrome scale (PANSS) score, of flexibly dosed paliperidone extended-release (ER) in subjects with schizophrenia previously unsuccessfully treated with other oral antipsychotics.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with good clinical practices and applicable regulatory requirements. The safety assessments included adverse events (AEs), pregnancy test, extrapyramidal symptom rating scale (ESRS), body weight, vital signs and physical examination.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 April 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	9 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 77
Country: Number of subjects enrolled	Bulgaria: 40
Country: Number of subjects enrolled	Switzerland: 41
Country: Number of subjects enrolled	Germany: 326
Country: Number of subjects enrolled	Denmark: 11
Country: Number of subjects enrolled	Spain: 84
Country: Number of subjects enrolled	Finland: 13
Country: Number of subjects enrolled	France: 140
Country: Number of subjects enrolled	United Kingdom: 21
Country: Number of subjects enrolled	Greece: 130
Country: Number of subjects enrolled	Croatia: 50
Country: Number of subjects enrolled	Hungary: 55
Country: Number of subjects enrolled	Israel: 32
Country: Number of subjects enrolled	Italy: 133
Country: Number of subjects enrolled	Lithuania: 52
Country: Number of subjects enrolled	Latvia: 52
Country: Number of subjects enrolled	Netherlands: 50

Country: Number of subjects enrolled	Poland: 45
Country: Number of subjects enrolled	Portugal: 82
Country: Number of subjects enrolled	Russian Federation: 235
Country: Number of subjects enrolled	Serbia: 48
Country: Number of subjects enrolled	Sweden: 48
Country: Number of subjects enrolled	Turkey: 47
Worldwide total number of subjects	1812
EEA total number of subjects	1388

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	1737
From 65 to 84 years	73
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 1848 subjects were screened, out of which 23 subjects were failed screening and 13 subjects did not receive study medication. Only, 1812 subjects were eligible for treatment who took at least one dose of study medication.

### Period 1

Period 1 title	Core Treatment Phase
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Arm title	Paliperidone Extended Release (ER)
-----------	------------------------------------

Arm description:

Paliperidone ER tablet in dose range of 3 to 12 milligrams (mg) per day was given orally per Investigator's discretion to subjects who transitioned to Paliperidone ER from other oral antipsychotics due to lack of efficacy, lack of tolerability, lack of compliance or other reasons up to 6 months.

Arm type	Experimental
Investigational medicinal product name	Paliperidone ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Paliperidone ER tablet in dose range of 3 to 12 milligrams (mg) per day was given orally in core phase.

Number of subjects in period 1	Paliperidone Extended Release (ER)
Started	1812
Completed	1283
Not completed	529
Consent withdrawn by subject	160
Adverse event and lack of efficacy	73
Other	43
Study medication non-compliance	35
Death	3
Adverse event	91
Lost to follow-up	33
Lack of efficacy	91

**Period 2**

Period 2 title	Extension Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

**Arms**

<b>Arm title</b>	Paliperidone Extended Release (ER)
------------------	------------------------------------

Arm description:

Paliperidone ER oral tablet in dose range of 3 to 12 mg per day were continued in Extension phase as per Investigator's discretion to subjects who transitioned to Paliperidone ER from other oral antipsychotics due to lack of efficacy, lack of tolerability, lack of compliance or other reasons. Subjects who completed 6 months Core Treatment Phase and choose to continue receiving Paliperidone in Extension Phase (main and modified extension phase) received Paliperidone ER until it is commercially available.

Arm type	Experimental
Investigational medicinal product name	Paliperidone ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Paliperidone ER tablet in dose range of 3 to 12 mg per day was given orally in extension phase.

<b>Number of subjects in period 2</b>	Paliperidone Extended Release (ER)
Started	605
Completed	324
Not completed	281
Consent withdrawn by subject	104
AE or SAE	19
Other	54
Study medication non-compliance	21
Modified Extension Phase	2
Lost to follow-up	11
AE/SAE and lack of efficacy	24
Lack of efficacy	33
Missing reason	13

## Baseline characteristics

### Reporting groups

Reporting group title	Paliperidone Extended Release (ER)
-----------------------	------------------------------------

Reporting group description:

Paliperidone ER tablet in dose range of 3 to 12 milligrams (mg) per day was given orally per Investigator's discretion to subjects who transitioned to Paliperidone ER from other oral antipsychotics due to lack of efficacy, lack of tolerability, lack of compliance or other reasons up to 6 months.

Reporting group values	Paliperidone Extended Release (ER)	Total

Subjects who completed 6 months Core Treatment Phase and choose to continue receiving Paliperidone in Extension Phase (main and modified extension phase) received Paliperidone ER until it is commercially available.

### **Primary: Core Phase: Percentage of Subjects With at Least 20 Percent Improvement in Total Positive and Negative Syndrome Scale (PANSS) Score in Those Subjects who Transitioned due to Lack of Efficacy**

End point title	Core Phase: Percentage of Subjects With at Least 20 Percent Improvement in Total Positive and Negative Syndrome Scale (PANSS) Score in Those Subjects who Transitioned due to Lack of Efficacy <sup>[1]</sup>
-----------------	---

End point description:

The PANSS is a 30-item scale to assess the neuropsychiatric symptoms of schizophrenia (psychiatric disorder with symptoms of emotional instability, detachment from reality, often with delusions and hallucinations, and withdrawal into the self). The PANSS provides a total score and scores for 3 subscales, the positive subscale (7 items), the negative subscale (7 items), and the general psychopathology subscale (16 items), each item scored on a scale of 1 (absent) to 7 (extreme). The total score ranges from 30 to 210 and higher score indicates greater severity. Intent to Treat (ITT) population for efficacy included all subjects who received paliperidone ER at least once and provided at least 1 post baseline efficacy measurement.

End point type	Primary
----------------	---------

End point timeframe:

Up to Week 26

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No formal statistical hypothesis testing was planned for this study due to the descriptive nature of this study.

<b>End point values</b>	Lack of Efficacy			
Subject group type	Subject analysis set			
Number of subjects analysed	998			
Units: percentage of subjects				
number (confidence interval 95%)	61.3 (58.2 to 64.4)			

## **Statistical analyses**

### Secondary: Core Phase: Change From Baseline in Short-Form 36 Health Survey (SF-36) Score

End point title	Core Phase: Change From Baseline in Short-Form 36 Health Survey (SF-36) Score
-----------------	---

**End point description:**

The SF-36 is a self-rated 36-item questionnaire measuring 8 dimensions (physical functioning, role-physical, bodily pain, general health, vitality, social functioning, role-emotional, and mental health) that are subsequently aggregated into 2 summary scales, the physical component summary (PCS) and mental component summary (MCS). Responses to questions within each dimension were transformed to scale scores that ranged from 0 to 100, with higher scores reflecting a better health-related functional status. Secondly, the PCS and MCS were standardized to have a mean of 50 and a standard deviation of 10 so that scale scores below 50 reflect a health status below average. An increase in the norm-based scores therefore indicates an improvement. ITT population for efficacy included all subjects who received paliperidone ER at least once and provided at least 1 post baseline efficacy measurement. Here, 'N' (number of subjects analyzed) signifies number of subjects evaluable for this endpoint.

## Secondary: Core Phase: Change From Baseline in Total Extrapyramidal Symptoms Rating Scale (ESRS) Score

End point title	Core Phase: Change From Baseline in Total Extrapyramidal Symptoms Rating Scale (ESRS) Score
-----------------	---

End point description:

The ESRS scale assesses parkinsonism (slow movements), dystonia (abnormal muscle movement causing focal/generalized, sustained muscle contractions, postures, and involuntary movements) and dyskinetic (involuntary muscle contractions) movement subscale. Parkinsonism consists of 8 items rated

on a 7-point scale (0=absent/normal and 6=worst score), Dystonia consists of 2 items rated on a 7-point scale (0=absent and 6=extremely severe) and Dyskinetic movements consists of 7 items rated on a 7-point scale (0=none and 6=worst score). Total score: 0-102. Lower scores indicate better condition. ITT population for safety included all subjects who received paliperidone ER at least once and provided any post baseline safety information. Here, 'N' (number of subjects analyzed) signifies number of subjects evaluable for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 12 years and 10 months

Adverse event reporting additional description:

Intent to Treat (ITT) population for safety included all subjects who received paliperidone ER at least once and provided any post baseline safety information.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
Dictionary version	9.1 & 10.0

### Reporting groups

Reporting group title	Paliperidone ER – Main and Modified Extension Phase
-----------------------	---

Reporting group description:

Paliperidone ER oral tablet in dose range of 3 to 12 mg per day were continued in Extension phase as per Investigator's discretion to subjects who transitioned to Paliperidone ER from other oral antipsychotics due to lack of efficacy, lack of tolerability, lack of compliance or other reasons. Subjects who completed 6 months Core Treatment Phase and choose to continue receiving Paliperidone in Extension Phase (main and modified extension phase) received Paliperidone ER until it is commercially available.

Reporting group title	Paliperidone Extended Release (ER) – Core Treatment Phase
-----------------------	---

Reporting group description:

Paliperidone ER tablet in dose range of 3 to 12 milligrams (mg) per day was given orally per Investigator's discretion to subjects who transitioned to Paliperidone ER from other oral antipsychotics due to lack of efficacy, lack of tolerability, lack of compliance or other reasons up to 6 months.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 June 2007	The amendment was issued for following changes. The maximum number of subjects per site was increased to allow larger sites to enroll more than 8 subjects. Inclusion criteria were updated as pregnancy tests were not to be performed for women of non-childbearing potential. Sections were updated based on text of the Summary of Product Characteristics (SmPC) submitted to the European Medicines Agency (EMA). Exclusion criteria were updated to make clear that current or history of substance use or abuse according to Diagnostic and Statistical Manual of Mental Disorders, fourth edition (DSM-IV) criteria was allowed and current or history of substance dependence according to DSM-IV criteria was not allowed. (This was the intention of the original protocol text, but the initial wording could be misunderstood). Concomitant therapy section was updated to allow the use of trihexyphenidyl as in some countries, benztropine mesylate or biperidene are not available, but trihexyphenidyl is. Footnote in the flow chart was reworded to better reflect the adverse events (AEs) to be recorded during the screening visit. As qualification of a clinician or physician was not required, the term "qualified" was deleted from Section 9. The wording in Section 10.2 Withdrawal from the study of the protocol was made consistent with other protocols. Section 16.2.2 was updated to clarify that the investigator financial disclosure form (IFDF) only needs to be collected if required by national law. Writing errors were corrected.
07 August 2007	The amendment was issued for following changes. The INVEGA Summary of Product Characteristics (SmPC), which was approved by the EMA, was added as attachment to the protocol and referred to in the body text to provide investigators with up-to-date medical guidance. In order to make the protocol consistent with the INVEGA SmPC several sections were updated.
27 August 2010	12-mg tablets were made unavailable. The Main Extension Phase was ended with the 'End of Main Extension Phase Visit' as originally described and a Modified Extension Phase was added to start immediately after this 'End of Main Extension Phase Visit'. The assessments during the Modified Extension Phase will be limited to clinical global impression severity (CGI-S) and adverse event (AE) reporting, both on a quarterly basis, and a body weight measurement at the end of the Modified Extension Phase.
01 February 2012	The Time and Events Schedule was updated to reflect the changes in the Modified Extension Phase. Regular Follow-Up Visits Section (Every 6 Months) during Modified Extension Phase was added. The sponsor suggested to have the Modified Extension Phase visits performed every 6 months, instead of every 3 months. As a consequence, CGI-S was performed every 6 months during the Modified Extension Phase.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

As this was an open-label, single-group trial, randomization and blinding procedures were not applicable. Comparability of the treatment cohorts was only adjusted for known covariates as subjects were not randomized over treatment cohorts.

Notes:
