

Clinical trial results:

An uncontrolled, open-label, titration, long-term safety (up to 12 months) and efficacy study of tamsulosin hydrochloride in children with neuropathic bladder, with a randomized pharmacokinetic sub-study investigating low, medium and high dose ranges.

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Analysis stage	Final
Date of interim/final analysis	23 October 2009
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	30 June 2009
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To characterise the pharmacokinetic (PK)/ pharmacodynamic (PD) profile and evaluate the safety and efficacy of tamsulosin hydrochloride (HCL) in children with an elevated detrusor leak point pressure associated with a known neurological disorder (e.g. spinal bifida), after which long-term safety can be assessed.

This trial has 3 different Data base locks (DBL) based on three separate populations PK / PD, Group D – Denovo and Group D – 527.51 Rollover. For PK / PD population the DBL date was 18July2007, for Group D – Denovo population the DBL date was 23Jan2009 and for Group D – 527.51 Rollover population the DBL date was 11Sep2009.

The Group D-Rollover portion of Study 527.66 was terminated early based on data from placebo-controlled Study 527.51 that showed lack of efficacy, thus, caution should be used in interpreting these results due to the impact of the early termination, as well as the impact of the study design on interpretation of results by dose.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct.

Background therapy: -

Evidence for comparator: -	
Actual start date of recruitment	19 April 2006
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This trial has 3 different DBLs and 3 different Clinical trial reports which were prepared based on 3 separate populations PK/PD, Group D-Denovo and Group D-527.51 Rollover. Group D-Denovo includes subjects from PK Phase and additional subjects and Group D – 527.51 Rollover includes subjects who successfully completed tamsulosin HCl Study 527.51.

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that they (the subjects) met all strictly implemented inclusion/exclusion criteria. Subjects were not to be randomised to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	PK sub-study (Treatment period)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open label, randomised and uncontrolled study.

Arms

Are arms mutually exclusive?	Yes
Arm title	tamsulosin - low dose level (Steady State - PK study)

Arm description:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the Leak point pressure (LPP) results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received low dose of 0.025 mg qd (once daily), body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm type	Experimental
Investigational medicinal product name	tamsulosin hydrochloride (0.025 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride and body weight of 12.1–25.0 kg received low dose of 0.025 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.05 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride and body weight of 25.1–50.0 kg received low dose of 0.05 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.1 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm title	tamsulosin - medium dose level (Steady State - PK study)
------------------	--

Arm description:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the LPP results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd with and body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Arm type	Experimental
Investigational medicinal product name	tamsulosin hydrochloride (0.05 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride and body weight of 12.1–25.0 kg received medium dose of 0.05 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.1 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride and body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.2 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride and body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm title	tamsulosin - high dose level (Steady State - PK study)
------------------	--

Arm description:

Subjects randomized to high dose level(0.004-0.008mg/kg) of tamsulosin hydrochloride,dependent on a subject's body weight.In PK study,all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight.Depending on the results of the LPP,subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy. Subjects with body weight of 12.1-25.0kg received high dose of 0.1mg qd, body weight of 25.1-50.0kg received high dose of 0.2mg qd & body weight of 50.1-100.0kg received high dose of 0.4mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.One subject randomised to high dose level was not treated. Although actual number of subjects started is 11,10 were reported to ensure consistent reporting with baseline characteristics that includes only treated subjects.

Arm type	Experimental
Investigational medicinal product name	tamsulosin hydrochloride (0.1 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to high dose level (0.004-0.008mg/kg) of tamsulosin hydrochloride and body weight of 12.1-25.0 kg received high dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.2 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to high dose level (0.004-0.008mg/kg) of tamsulosin hydrochloride and body weight of 25.1–50.0 kg received high dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.4 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects randomized to high dose level (0.004-0.008mg/kg) of tamsulosin hydrochloride and body weight of 50.1–100.0 kg received high dose of 0.4 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Number of subjects in period 1	tamsulosin - low dose level (Steady State - PK study)	tamsulosin - medium dose level (Steady State - PK study)	tamsulosin - high dose level (Steady State - PK study)
Started	10	10	10
Completed	10	9	10

Period 2

Period 2 title	Group D-Denovo (Treatment period)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Open-label, uncontrolled trial and dose titrated, starting at the lowest dose level based on a subject's weight, in order to establish their individual efficacious dose.

Arms

Are arms mutually exclusive?	No
Arm title	tamsulosin - low dose level (Group D-Denovo)

Arm description:

Subjects received low dose level (0.001 – 0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 12.1– 25.0 kg received low dose of 0.025 mg qd, body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm type	Experimental
Investigational medicinal product name	tamsulosin hydrochloride (0.025 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects with body weight of 12.1– 25.0 kg received low dose of 0.025 mg qd of tamsulosin hydrochloride by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.05 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects with body weight of 25.1–50.0 kg received low dose of 0.05 mg qd of tamsulosin hydrochloride by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.1 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects with body weight of 50.1–100.0 kg received low dose of 0.1 mg qd of tamsulosin hydrochloride by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm title	tamsulosin - medium dose level (Group D-Denovo)
------------------	---

Arm description:

Subjects who were titrated to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 9.0–12.0 kg received medium dose of 0.025 mg qd as their starting dose, body weight of 12.1–25.0 kg could have titrated to a medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg could have titrated to a medium dose of 0.1 mg qd and body weight of 50.1–100.0 kg could have titrated to a medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Three different Clinical trial reports were prepared based on 3 separate populations (PK/PD, Group D-Denovo & Group D-527.51). Group D-Denovo includes patients from PK Phase & additional subjects. Thus this milestone represents the number of PK Study Subjects who Entered Group D-Denovo and treated for tamsulosin - low dose level.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Subjects who were titrated to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride and body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.2 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects who were titrated to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride and body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm title	tamsulosin - high dose level (Group D-527.51 Rollover)
------------------	--

Arm description:

Subjects titrated to high dose level (0.004-0.008 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D-527.51 Rollover, once subjects exited the double-blind trial they were rolled over into this trial. All subjects had to titrate to their efficacious dose. Doses that were available were based on subject's weight. Depending on the LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up in hopes that the higher doses would provide some efficacy.

Subjects with body weight of 9.0-12.0 kg received high dose of 0.05 mg, body weight of 12.1-25.0 kg received high dose of 0.1 mg, body weight of 25.1-50.0 kg received high dose of 0.2 mg, body weight of 50.1-100.0 kg received high dose of 0.4 mg by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Arm type	Experimental
Investigational medicinal product name	tamsulosin hydrochloride (0.05 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects who were titrated to high dose level (0.004-0.008 mg/kg) of tamsulosin hydrochloride and body weight of 9.0–12.0 kg received high dose of 0.05 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.1 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects who were titrated to high dose level (0.004-0.008 mg/kg) of tamsulosin hydrochloride and body weight of 12.1–25.0 kg received high dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.2 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects who were titrated to high dose level (0.004-0.008 mg/kg) of tamsulosin hydrochloride and body weight of 25.1–50.0 kg received high dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Investigational medicinal product name	tamsulosin hydrochloride (0.4 mg)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects who were titrated to high dose level (0.004-0.008 mg/kg) of tamsulosin hydrochloride and body weight of 50.1–100.0 kg received high dose of 0.4 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Notes:

[4] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Three separate reports were prepared for this study evaluating 3 different populations: PK sub-study, Group D-Denovo and the Group D Rollover (included subjects who entered Study 527.66 from Study 527.51). Since period 1 evaluates only the PK sub-study population, Group D-Rollover baseline data information was selected to be used for this evaluation.

Number of subjects in period 3	tamsulosin - low dose level (Group D-527.51 Rollover)	tamsulosin - medium dose level (Group D-527.51 Rollover)	tamsulosin - high dose level (Group D-527.51 Rollover)
Started	54	13	29
Completed	1	1	0
Not completed	53	12	29
Other reason not defined above	53	11	28
Adverse event, non-fatal	-	1	1

Baseline characteristics

Reporting groups^[1]

Reporting group title	Group D-Rollover (Treatment period)
-----------------------	-------------------------------------

Reporting group description: -

Notes:

[1] - The number of subjects reported to be in the baseline period is not equal to the worldwide number of subjects enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on the subjects who were randomised after successfully completing the screening period and received at least one dose of the trial medication (Group D-Rollover).

Reporting group values	Group D-Rollover (Treatment period)	Total	
Number of subjects	96	96	
Age categorical			
Units: Subjects			

Age continuous			
Treated Set: Includes all patients who are dispensed study medication and are documented to have taken at least one dose of treatment. In this study, some of the subjects are in multiple phases: PK and Group D-Denovo. Thus, the baseline characteristics are based on the unique subject entered into the study.

Subject analysis sets

Subject analysis set title	PK Study - Single dose (Treatment period)
----------------------------	---

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The subject analysis type is infact Pharmacokinetics single dose set (PK-SD).

Subjects received low dose level (0.001 – 0.002 mg/kg) of tamsulosin hydrochloride once daily dependent on a subject's body weight (12.1 – 25.0 kg, 25.1 – 50.0 kg and 50.1 – 100.0 kg), by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

All subjects who were randomized, successfully took and retained the first dose of study medication and provided blood samples for PK after single dose were included in the PK-SD set.

In PK Single dose study, it was planned to obtain the Low dose PK data after single dose from all the 30 patients randomized to Low, Medium and high. However as per the protocol amendment, the PK sampling after first drug administration of low dose level was stopped after inclusion of 11 patients and therefore the PK sample of 11 patients were evaluated for PK single dose.

Subject analysis set title	PK Study - Steady state (Treatment period)
----------------------------	--

Subject analysis set type	Intention-to-treat
---------------------------	--------------------

Subject analysis set description:

The subject analysis type is infact pharmacokinetics steady state set (PK-SS).

In PK study - steady state, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the Leak point pressure (LPP)

results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

pharmacokinetics steady state set (PK-SS): Includes all subjects who were randomized successfully took study medication for two weeks at their randomized dose level and provided blood samples for PK at their steady state visit were included in the PK-SS set.

Subject analysis set title	D-Denovo (Treatment Period)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The subject analysis type is in fact Treated set.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Treated set (Treat): Includes all subjects who are dispensed study medication and are documented to have taken at least one dose of treatment.

End points

End points reporting groups

Reporting group title	tamsulosin - low dose level (Steady State - PK study)
-----------------------	---

Reporting group description:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the Leak point pressure (LPP) results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received low dose of 0.025 mg qd (once daily), body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Reporting group title	tamsulosin - medium dose level (Steady State - PK study)
-----------------------	--

Reporting group description:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the LPP results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd with and body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - high dose level (Steady State - PK study)
-----------------------	--

Reporting group description:

Subjects randomized to high dose level(0.004-0.008mg/kg) of tamsulosin hydrochloride,dependent on a subject's body weight.In PK study,all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight.Depending on the results of the LPP,subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy. Subjects with body weight of 12.1-25.0kg received high dose of 0.1mg qd, body weight of 25.1-50.0kg received high dose of 0.2mg qd & body weight of 50.1-100.0kg received high dose of 0.4mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.One subject randomised to high dose level was not treated. Although actual number of subjects started is 11,10 were reported to ensure consistent reporting with baseline characteristics that includes only treated subjects.

Reporting group title	tamsulosin - low dose level (Group D-Denovo)
-----------------------	--

Reporting group description:

Subjects received low dose level (0.001 – 0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 12.1– 25.0 kg received low dose of 0.025 mg qd, body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Reporting group title	tamsulosin - medium dose level (Group D-Denovo)
-----------------------	---

Reporting group description:

Subjects who were titrated to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 9.0–12.0 kg received medium dose of 0.025 mg qd as their starting dose, body weight of 12.1–25.0 kg could have titrated to a medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg could have titrated to a medium dose of 0.1 mg qd and body weight of 50.1–100.0 kg could have titrated to a medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - high dose level (Group D-Denovo)
-----------------------	---

Reporting group description:

Subjects titrated to high dose level (0.004–0.008 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 9.0–12.0 kg received high dose of 0.05 mg qd, body weight of 12.1–25.0 kg received high dose of 0.1 mg qd, body weight of 25.1–50.0 kg received high dose of 0.2 mg qd & body weight of 50.1–100.0 kg received high dose of 0.4 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - low dose level (Group D-527.51 Rollover)
-----------------------	---

Reporting group description:

Subjects received low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D- 527.51 Rollover, once subjects exited the double-blind trial they were rolled over into this trial (527.66). All subjects were to titrate to their efficacious dose. Doses that were available were based on subject's weight. Depending on the LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up in hopes that that the higher doses would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received low dose of 0.025 mg qd, body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg qd received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - medium dose level (Group D-527.51 Rollover)
-----------------------	--

Reporting group description:

Subjects who were to receive medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D-527.51 Rollover, once subjects exited the double-blind trial they were rolled over into this trial. All subjects were to titrate to their efficacious dose. Doses that were available were based on subject's weight. Depending on the LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up in hopes that the higher doses would provide some efficacy.

Subjects with body weight of 9.0–12.0 kg received medium dose of 0.025 mg qd, body weight of 12.1–25.0 kg received medium dose of 0.05 mg qd , body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd, body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Reporting group title	tamsulosin - high dose level (Group D-527.51 Rollover)
-----------------------	--

Reporting group description:

Subjects titrated to high dose level (0.004–0.008 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D-527.51 Rollover, once subjects exited the double-blind trial they were rolled over into this trial. All subjects had to titrate to their efficacious dose. Doses that were available were based on subject's weight. Depending on the LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up in hopes that the higher doses would provide some efficacy.

Subjects with body weight of 9.0-12.0 kg received high dose of 0.05 mg, body weight of 12.1-25.0 kg received high dose of 0.1 mg, body weight of 25.1-50.0 kg received high dose of 0.2 mg, body weight of 50.1-100.0 kg received high dose of 0.4 mg by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Subject analysis set title	PK Study - Single dose (Treatment period)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The subject analysis type is infact Pharmacokinetics single dose set (PK-SD).

Subjects received low dose level (0.001 – 0.002 mg/kg) of tamsulosin hydrochloride once daily dependent on a subject's body weight (12.1 – 25.0 kg, 25.1 – 50.0 kg and 50.1 – 100.0 kg), by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

All subjects who were randomized, successfully took and retained the first dose of study medication and provided blood samples for PK after single dose were included in the PK-SD set.

In PK Single dose study, it was planned to obtain the Low dose PK data after single dose from all the 30 patients randomized to Low, Medium and high. However as per the protocol amendment, the PK sampling after first drug administration of low dose level was stopped after inclusion of 11 patients and therefore the PK sample of 11 patients were evaluated for PK single dose.

Subject analysis set title	PK Study - Steady state (Treatment period)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The subject analysis type is infact pharmacokinetics steady state set (PK-SS).

In PK study - steady state, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the Leak point pressure (LPP) results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

pharmacokinetics steady state set (PK-SS): Includes all subjects who were randomized successfully took study medication for two weeks at their randomized dose level and provided blood samples for PK at their steady state visit were included in the PK-SS set.

Subject analysis set title	D-Denovo (Treatment Period)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

The subject analysis type is in fact Treated set.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Treated set (Treat): Includes all subjects who are dispensed study medication and are documented to have taken at least one dose of treatment.

Primary: Percentage of LLP responders for Group D-Denovo and Group D-527.51 Rollover

End point title	Percentage of LLP responders for Group D-Denovo and Group D-527.51 Rollover ^[1]
-----------------	--

End point description:

Group D-Denovo: Leak point pressure (LPP) Response at (response defined as a subject who achieves an LPP pressure <40 cm H₂O) end of treatment based on two confirmatory values. Group D-527.51 Rollover: Leak point pressure (LPP) Response at (response defined as a subject who achieves an LPP pressure <40 cm H₂O) last value of the treatment based on two confirmatory values. The last value on

treatment included any final value prior to discontinuation of treatment, regardless of the length of treatment. Detrusor leak point pressure (LPP) recorded in cm H₂O which was obtained using a standard urodynamic technique, a cystometrogram. Descriptive statistics were used to assess this endpoint. This Outcome Measure was only prespecified for Group D-Denovo & Group D-527.51 Rollover subjects, so results of these two groups are provided. Full Analysis Set for LPP (FAS-LPP): This subject set includes all subjects in Treated set who received one dose of treatment & had one on treatment LPP measurement.

Secondary: Response defined as stabilization or improvement of hydroureter measured by renal ultrasound compared to baseline for Group D-Denovo and Group D-527.51 Rollover

End point title	Response defined as stabilization or improvement of hydroureter measured by renal ultrasound compared to baseline for Group D-Denovo and Group D-527.51 Rollover
-----------------	--

End point description:

Response defined as stabilization or improvement of hydroureter measured by renal ultrasound compared to baseline by treatment group (subjects classified according to treatment they were taking at wk 52 or EOT) at wk 52 for Group D-Denovo & (subjects classified according to treatment they were taking at EOT) at LVOT for Group D-527.51 Rollover. Baseline assessments were obtained from trial 527.51 for Group D-527.51 Rollover. The overall treatment duration was not sufficient to reach any meaningful conclusions regarding improvement or stabilization of hydroureter in Group D-527.51 Rollover. Hydroureter response is defined as improvement or stabilization based upon the presence or absence of hydroureter at EOT compared to baseline. This OM was only pre-specified for Group D-Denovo & Group D-527.51 Rollover subjects, so results of these two groups are provided. FAS for Renal (FAS-RENAL): Includes all patients in the Treated set who received one dose of treatment and had one treatment renal measurement.

Secondary: Response defined as stabilization or improvement of hydronephrosis measured by renal ultrasound compared to baseline for Group D-Denovo and Group D-527.51 Rollover

End point title	Response defined as stabilization or improvement of hydronephrosis measured by renal ultrasound compared to baseline for Group D-Denovo and Group D-527.51 Rollover
-----------------	---

End point description:

Response defined as stabilization or improvement of hydronephrosis measured by renal ultrasound compared to baseline by treatment group (subjects are classified according to the treatment they were taking at wk 52 or EOT) at wk 52 for Group D-Denovo & (subjects classified according to the treatment they were taking at EOT) at last value on treatment (LVOT) for Group D-527.51 Rollover. Baseline assessments were obtained from trial 527.51 for Group D-527.51 Rollover. Overall treatment duration was not sufficient to reach any meaningful conclusions regarding improvement or stabilization of hydronephrosis in the Group D-527.51 rollover. Hydronephrosis response is defined as improvement or stabilization based upon ultrasound grading at the end of the study. The lower or same grade at EOT compared to baseline is considered an improvement or stabilization. This Outcome Measure was only pre-specified for Group D-Denovo and Group D-527.51 Rollover subjects, so results of these two groups are provided.

Statistical analyses

Statistical analysis title	Cmax,ss (dose proportionality)
Statistical analysis description: Dose proportionality for Cmax,ss was explored.	
Comparison groups	tamsulosin - low dose level (Steady State - PK study) v tamsulosin - medium dose level (Steady State - PK study) v tamsulosin - high dose level (Steady State - PK study)
Number of subjects included in analysis	29
Analysis specification	Pre-specified
Analysis type	other ^[63]
Parameter estimate	Slope
Point estimate	1.0039
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.6499
upper limit	1.3579
Variability estimate	Standard error of the mean
Dispersion value	0.1725

Notes:

[63] - Dose proportionality for Cmax,ss was explored based on the regression model. Based on the estimate for the slope parameter, a two sided 95% confidence interval for the slope was computed. Perfect dose proportionality would correspond to a slope of 1.

Standard error of the mean is actually standard error of the slope.

Statistical analyses

Statistical analysis title	AUC _{T,ss} (Dose proportionality)
----------------------------	--

Statistical analysis description:

Dose proportionality for AUC_{T,ss} was explored.

Comparison groups	tamsulosin - medium dose level (Steady State - PK study) v tamsulosin - high dose level (Steady State - PK study) v tamsulosin - low dose level (Steady State - PK study)
Number of subjects included in analysis	29
Analysis specification	Pre-specified
Analysis type	other ^[76]
Parameter estimate	Slope
Point estimate	0.98
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.5934
upper limit	1.3666
Variability estimate	Standard error of the mean
Dispersion value	0.1884

Notes:

[76] - Dose proportionality for AUC_{T,ss} was explored based on the regression model. Based on the estimate for the slope parameter, a two sided 95% confidence interval for the slope was computed. Perfect dose proportionality would correspond to a slope of 1.

Standard error of the mean is actually standard error of the slope.

Secondary: AUC_{T,ss}, DW, norm

End point title	AUC _{T,ss} , DW, norm
-----------------	--------------------------------

End point description:

Dose- and weight-normalized of AUC_{T,ss} (AUC_{T,ss}, DW, norm).

Weight normalization of AUC_{τ,ss} was performed by dividing the respective quantities by the reciprocal of body weight in kg. This Outcome Measure was only pre-specified for PK Study steady state group subjects, so results of this group is provided.

End point type	Secondary

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first drug administration until 28 days after last study drug administration, upto 80 days (Steady State - PK study), upto 450 days (Group D-Denovo) and upto 395 days (Group D-527.51 Rollover).

Adverse event reporting additional description:

Subjects were titrated to their efficacious dose. Based on LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up to their higher doses which might have provided some efficacy. Therefore some of the subjects were counted more than once for having reported adverse events with different doses of the study.

Reporting groups

Reporting group title	tamsulosin - low dose level (Steady State - PK study)
-----------------------	---

Reporting group description:

Subjects randomized to low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the Leak point pressure (LPP) results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received low dose of 0.025 mg qd (once daily), body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Reporting group title	tamsulosin - medium dose level (Steady State - PK study)
-----------------------	--

Reporting group description:

Subjects randomized to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the LPP results, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg received medium dose of 0.1 mg qd with and body weight of 50.1–100.0 kg received medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - high dose level (Steady State - PK study)
-----------------------	--

Reporting group description:

Subjects randomized to high dose level (0.004–0.008 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight. In PK study, all subjects were titrated to their randomized dose level that they needed to receive which was based on their weight. Depending on the results of the LPP, subjects could remain on that dose if it was found to be efficacious or go back to a lower efficacious dose or titrate up in hopes that the higher dose would provide some efficacy. Subjects with body weight of 12.1–25.0 kg received high dose of 0.1 mg qd, body weight of 25.1–50.0 kg received high dose of 0.2 mg qd & body weight of 50.1–100.0 kg received high dose of 0.4 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast. One subject randomised to high dose level was not treated. Although actual number of subjects started is 11, 10 were reported to ensure consistent reporting with baseline characteristics that includes only treated subjects.

Reporting group title	tamsulosin - low dose level (Group D-Denovo)
-----------------------	--

Reporting group description:

Subjects received low dose level (0.001 – 0.002 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 12.1– 25.0 kg received low dose of 0.025 mg qd, body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt taken 30 minutes after breakfast.

Reporting group title	tamsulosin - medium dose level (Group D-Denovo)
-----------------------	---

Reporting group description:

Subjects who were titrated to medium dose level (0.002–0.004 mg/kg) of tamsulosin hydrochloride, dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 9.0–12.0 kg received medium dose of 0.025 mg qd as their starting dose, body weight of 12.1–25.0 kg could have titrated to a medium dose of 0.05 mg qd, body weight of 25.1–50.0 kg could have titrated to a medium dose of 0.1 mg qd and body weight of 50.1–100.0 kg could have titrated to a medium dose of 0.2 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - high dose level (Group D-Denovo)
-----------------------	---

Reporting group description:

Subjects titrated to high dose level (0.004–0.008 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D-Denovo, all subjects started the study at the Low Dose level, with the exception of the children with a body weight between 9 kg and 12 kg (they started at the Medium Dose level), and titrated up to higher dose levels on a weekly basis until an efficacious level was reached. The subjects remained on their efficacious dose level for the remainder of the study.

Subjects with body weight of 9.0–12.0 kg received high dose of 0.05 mg qd, body weight of 12.1–25.0 kg received high dose of 0.1 mg qd, body weight of 25.1–50.0 kg received high dose of 0.2 mg qd & body weight of 50.1–100.0 kg received high dose of 0.4 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

Reporting group title	tamsulosin - low dose level (Group D-527.51 Rollover)
-----------------------	---

Reporting group description:

Subjects received low dose level (0.001–0.002 mg/kg) of tamsulosin hydrochloride, once daily dependent on a subject's body weight.

In Group D- 527.51 Rollover, once subjects exited the double-blind trial they were rolled over into this trial (527.66). All subjects were to titrate to their efficacious dose. Doses that were available were based on subject's weight. Depending on the LPP results, subjects could remain on that dose if it was found to be efficacious or titrate up in hopes that that the higher doses would provide some efficacy.

Subjects with body weight of 12.1–25.0 kg received low dose of 0.025 mg qd, body weight of 25.1–50.0 kg received low dose of 0.05 mg qd and body weight of 50.1–100.0 kg received low dose of 0.1 mg qd by sprinkling the content of the capsule(s) over teaspoon of apple sauce or yogurt, taken 30 minutes after breakfast.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 January 2006	1) Inclusion criteria changed to include patients up to 16 years of age (previously 15 years of age maximum) 2) Terminology "end of study" was used incorrectly and changed to "end of treatment" where applicable. 3) Additional safety monitoring was implemented, including additional ECG (Visit 9), urinalysis, and recording of post-void residual for specific visits. 4) Study population was further described as "patient with elevated detrusor leak point pressure associated with a known neurological disorder (e.g., spina bifida)". 5) Hormonal assays were added at Visit 9 for Group D-Rollover patients.
23 October 2006	1) After first 11 patients provided first-dose PK samples, first-dose PK sampling was made optional for all future patients 2) Due to altered PK sampling on Day 1 (Visit 2), vital sign testing and orthostatic testing were decreased. 3) The detrusor leak point pressure eligibility requirements were clarified 4) The addition of recent Botox injections used for urological disease management was added as an exclusion criterion. 5) Yogurt was added as an alternative drug administration vehicle, the amount of vehicle was specified, and the need to take a spoonful of water after administration of the drug was added. 6) The study drug storage conditions were further clarified

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
30 June 2009	The Group D-Rollover portion of Study 527.66 was terminated early based on data from placebo-controlled Study 527.51 that showed lack of efficacy in reducing LPP to <40 cm H ₂ O. Reductions in detrusor LPP were observed for some patients during the study.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In Group D-527.51 Rollover study, due to the early termination caution should be used in interpreting these results due to the impact of the early termination, as well as the impact of the study design on interpretation of results by dose.

Notes:
