

**Clinical trial results:**

A Phase 2, Prospective, Randomized, Multicenter, Double-blind, Active-control, Parallel-group Study to Determine the Safety of and to Select a Treatment Regimen of CC-4047 (Pomalidomide) Either as Single-agent or in Combination With Prednisone to Study Further in Subjects With Myelofibrosis With Myeloid Metaplasia

Summary

EudraCT number	2006-004553-17
Trial protocol	GB ES AT IT DE
Global end of trial date	24 September 2013

Results information

Result version number	v1 (current)
This version publication date	14 July 2016
First version publication date	07 August 2015

Trial information**Trial identification**

Sponsor protocol code	CC-4047-MMM-001
-----------------------	-----------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00463385

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No
--	----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 November 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 September 2013
Global end of trial reached?	Yes
Global end of trial date	24 September 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To select a treatment regimen of CC-4047 either as single-agent or in combination with prednisone to study further in subjects with myelofibrosis with myeloid metaplasia (MMM).

Protection of trial subjects:

Protection of Subjects by Institutional Review Board/Independent Ethics Committee Review and Approval; Protection of Patient Confidentiality

Background therapy: -

Evidence for comparator:

This study in MMM was designed to determine the appropriate CC-4047 dose and regimen as a monotherapy or in combination with prednisone. The comparator (prednisone monotherapy) facilitates the description of the Adverse Event (AE) profile of CC-4047. The prednisone control arm also allowed for a comparison in response rates of the CC-4047 mono- and combination therapies; thus providing a reasonable basis of information for designing further studies should the outcomes be in favor of a CC-4047 arm.

Actual start date of recruitment	19 April 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	Austria: 5
Country: Number of subjects enrolled	Italy: 28
Country: Number of subjects enrolled	United States: 52
Worldwide total number of subjects	88
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	52
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were entered into the Pre-randomization phase and were evaluated for the inclusion and exclusion criteria for the Double-Blind Treatment Phase of the study. The Pre-Randomization Phase did not last more than 28 days. However, the bone marrow histology for diagnosis may have preceded this period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

A double-blind technique was used and was chosen to minimize bias on the part of participants, investigators, and the sponsor. Identical placebo capsules were supplied to match the 0.5 mg and 1.0 mg pomalidomide capsules. Placebo to match prednisone was also provided. The blind was not to be broken during the Double-Blind Treatment Phase unless in the opinion of the investigator it was absolutely needed to safely treat the subject. The medical monitor was to be contacted prior to unblinding.

Arms

Are arms mutually exclusive?	Yes
Arm title	Prednisone

Arm description:

Participants received oral prednisone from Day 1-28 of each 28-day cycle for up to 3 cycles (84 days), 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day, and pomalidomide placebo tablets on Days 1-28 for up to 12 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, participants were discontinued from the study.

Arm type	Active comparator
Investigational medicinal product name	Prednisone
Investigational medicinal product code	H02 AB07
Other name	Deltasone; Orasone
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received oral prednisone from Day 1-28 of each 28-day cycle for up to 3 cycles (84 days), 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day, and pomalidomide placebo tablets on Days 1-28 for up to 12 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, participants were discontinued from the study.

Investigational medicinal product name	Pomalidomide Placebo
Investigational medicinal product code	
Other name	Placebo
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received oral prednisone from Day 1-28 of each 28-day cycle for up to 3 cycles (84 days), 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day, and pomalidomide placebo tablets on Days 1-28 for up to 12 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, participants were discontinued from the study.

Arm title	Pomalidomide 2 mg
------------------	-------------------

Arm description:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and prednisone placebo tablets on Days 1-28 for the first 3 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Arm type	Experimental
Investigational medicinal product name	Pomalidomide
Investigational medicinal product code	CC-4047
Other name	Imnovid; Pomalyst
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and prednisone placebo tablets on Days 1-28 for the first 3 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Investigational medicinal product name	Prednisone Placebo
Investigational medicinal product code	
Other name	Placebo
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and prednisone placebo tablets on Days 1-28 for the first 3 cycles in the Double-Blind Treatment Phase.

After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Arm title	Pomalidomide 2 mg + Prednisone
------------------	--------------------------------

Arm description:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Arm type	Experimental
Investigational medicinal product name	Pomalidomide
Investigational medicinal product code	CC-4047
Other name	Imnovid; Pomalyst
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Period Title: Overall Study

Investigational medicinal product name	Prednisone
Investigational medicinal product code	H02 AB07
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal

Arm title	Pomalidomide 0.5 mg + Prednisone
------------------	----------------------------------

Arm description:

Participants received 0.5 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 0.5 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Arm type	Experimental
Investigational medicinal product name	Pomalidomide
Investigational medicinal product code	CC-4047
Other name	Imnovid
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received 0.5 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 0.5 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

End points

End points reporting groups

Reporting group title	Prednisone
-----------------------	------------

Reporting group description:

Participants received oral prednisone from Day 1-28 of each 28-day cycle for up to 3 cycles (84 days), 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day, and pomalidomide placebo tablets on Days 1-28 for up to 12 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, participants were discontinued from the study.

Reporting group title	Pomalidomide 2 mg
-----------------------	-------------------

Reporting group description:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and prednisone placebo tablets on Days 1-28 for the first 3 cycles in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Reporting group title	Pomalidomide 2 mg + Prednisone
-----------------------	--------------------------------

Reporting group description:

Participants received 2 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 2 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Reporting group title	Pomalidomide 0.5 mg + Prednisone
-----------------------	----------------------------------

Reporting group description:

Participants received 0.5 mg oral pomalidomide daily from Day 1-28 of each 28-day cycle for up to 12 cycles (336 days), and oral prednisone tablets on Days 1-28 for the first 3 cycles, 1st cycle = 30 mg daily, 2nd cycle = 15 mg daily, 3rd cycle = 15 mg every other day in the Double-Blind Treatment Phase. After the completion of cycle 12 and upon unblinding, eligible participants continued to receive oral pomalidomide 0.5 mg daily, from Days 1-28 of each cycle. Participants could remain on study treatment in the Extension Phase until disease progression, unacceptable toxicity or voluntary withdrawal.

Primary: Percentage of Participants With a Clinical Response Within the First 6 Cycles of Treatment

End point title	Percentage of Participants With a Clinical Response Within the First 6 Cycles of Treatment
-----------------	--

End point description:

A clinical responder was defined as either:

- A baseline red blood cell (RBC)-transfusion-dependent participant with a ≥ 56 consecutive day RBC transfusion-free period after the first dose of study drug, or
- A baseline RBC-transfusion-independent participant with an increase in hemoglobin of 2.0 g/dL or more from baseline for ≥ 56 consecutive days in the absence of RBC transfusions, or
- A participant with either a $\geq 50\%$ reduction in palpable splenomegaly of a spleen that was ≥ 10 cm at baseline or a spleen that was palpable at > 5 cm and became not palpable.

Participants who discontinued the study early without achieving clinical response were counted as non-responders. Modified intent-to-treat (MITT), defined as the patients who had a confirmed diagnosis of Myelofibrosis with myeloid metaplasia (MMM), received at least one dose of study drug, and participated in the study for at least 56 days.

End point description:

Title: Time to the First Clinical Response

Description: The time to the first clinical response achieved within 168 days after the first study drug dosing date was calculated for participants who achieved a clinical response as:

Start date of the first clinical response - the first study drug date +1.

A clinical responder was defined as either:

- A baseline red blood cell (RBC)-transfusion-dependent participant with a ≥ 56 consecutive day RBC transfusion-free period after the first dose of study drug, or
- A baseline RBC-transfusion-independent participant with an increase in hemoglobin of 2.0 g/dL or

more from baseline for ≥ 56 consecutive days in the absence of RBC transfusions, or
c. A participant with either a $\geq 50\%$ reduction in palpable splenomegaly of a spleen that was ≥ 10 cm at baseline or a spleen that was palpable at > 5 cm and became not palpable.

Secondary: Duration of First Clinical Response

End point title	Duration of First Clinical Response
-----------------	-------------------------------------

End point description:

For RBC-transfusion-dependent patients, duration of response was calculated as the last day of response - first day of response +1, where the last day of response was the date of the first RBC-transfusion administered at or more than 56 days after the response started. For patients who did not receive a subsequent transfusion after the response started, the end date of response was censored at the day of last hemoglobin assessment.

For RBC-transfusion-independent patients, the duration of response was calculated as the last day of response - first day of response +1, where the last day of response was the earlier of the date of a hemoglobin increase of < 2.0 g/dL and the date of a RBC transfusion at ≥ 56 days after the response started. For patients whose hemoglobin measurements were always ≥ 2.0 g/dL and never received a RBC transfusion after response started, the end date of the response was censored at the date of last hemoglobin measurement.

Kaplan-Meier methodology was used.

Secondary: Change From Baseline in Functional Assessment of Cancer Therapy-Anemia (FACT-An) Subscale and Total Scores

End point title	Change From Baseline in Functional Assessment of Cancer Therapy-Anemia (FACT-An) Subscale and Total Scores
-----------------	--

End point description:

The FACT-An comprises the four subscales of the 27-item FACT-General Scale (FACT-G), Physical Well-being, Social/Family Well-being, Emotion Well-being, Functional Well-Being, and the Additional Concerns Anemia subscale. Questions are rated on a scale from 0 to 4, where higher scores indicate more impact on quality of life.

- Physical Well-being consists of 7 questions, the subscale score ranges from 0-28;
- Social/Family Well-being consists of 7 questions, the subscale score ranges from 0-28;
- Emotion Well-being consists of 6 questions, the subscale score ranges from 0-24;
- Functional Well-Being consists of 7 questions, the subscale score ranges from 0-28;
- Anemia subscale consists of 20 questions, the subscale score ranges from 0-80;
- Total FACT-An score ranges from 0-188.

Intent-to-treat patients with available data.

Secondary: Number of Participants With Adverse Events (AEs)

End point title	Number of Participants With Adverse Events (AEs)
-----------------	--

End point description:

A serious AE (SAE) was defined as any AE which resulted in death or was life-threatening, required or prolonged inpatient hospitalization, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, or constituted an important medical event (events that may have jeopardized the patient or required intervention to prevent one of the outcomes listed above).

The severity of AEs were graded according to National Cancer Institute (NCI) Common Terminology Criteria for Adverse Events (CTCAE, Version 3.0) or according to the following scale:

Grade 1 = Mild; Grade 2 = Moderate; Grade 3 = Severe; Grade 4 = Life-threatening; Grade 5 = Death.

The Investigator determined the relationship between study drug and the occurrence of an AE as "Not Related" or "Related" (since the study was double-blinded, a patient receiving only prednisone could have an AE that was judged as related to pomalidomide, and vice-versa). Safety population (all treated patients).

End point type	Secondary
----------------	-----------

End point timeframe:

From date of the first dose of the study drug until discontinuation or the data cut-off date (up to approximately 45 months).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 January 2008	For the European Union only and the following included: 1. The inclusion of new study personnel and central lab 2. The pomalidomide warning label and handling instructions 4. Allowing for additional visits, and minor administrative wording changes
13 August 2008	The protocol was amended (for all countries) to add the extension phase and for miscellaneous minor changes
13 February 2009	The protocol was amended (for all countries) to update information on: 1. An update to the study drug packaging and storage 2. A revision to the extension phase from 12 cycles to open-ended for responders 3. Minor grammatical revisions.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
