

## Clinical trial results:

**Prospective multicenter phase III clinical trial using cytoreductive surgery with hyperthermic intraoperative chemotherapy (HIPEC) after preoperative chemotherapy in patients with peritoneal carcinomatosis of gastric cancer incl. adenocarcinoma of the esophagogastric junction**

### Summary

EudraCT number	2006-006088-22
Trial protocol	DE
Global end of trial date	09 June 2020

### Results information

Result version number	v1 (current)
This version publication date	29 June 2022
First version publication date	29 June 2022
Summary attachment (see zip file)	Report (Gastripec_Ergebnisbericht_final1.0_2021-12-03_unterschrieben.pdf)

### Trial information

#### Trial identification

Sponsor protocol code	Gastripec-I
-----------------------	-------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02158988
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	Charité Berlin
Sponsor organisation address	Universitätsmedizin Berlin, Berlin, Germany,
Public contact	Beate Rau, Chirurgie, Charité Campus Virchow-Klinikum, 0049 (0)30450 622 214, beate.rau@charite.de
Scientific contact	Beate Rau, Chirurgie, Charité Campus Virchow-Klinikum, 0049 (0)30450 622 214, beate.rau@charite.de

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 December 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 June 2020
Global end of trial reached?	Yes
Global end of trial date	09 June 2020
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Evaluation of the efficacy of hyperthermic intraoperative chemotherapy (HIPEC) (extension of survival starting at randomisation) by combination of pre-and postoperative chemotherapy + cytoreductive surgery and HIPEC compared to pre-and postoperative chemotherapy + cytoreductive surgery without HIPEC

Protection of trial subjects:

Patient safety is ensured on the one hand by the collection of the secondary endpoint "30-day complication rate after cytoreductive surgery with or without HIPEC" and on the other hand by regular examinations during study therapy and at a maximum interval of 3 months in follow-up.

The study therapy is continued for the individual patient in a dose-limited manner or, if necessary, discontinued if there is serious dose-limiting toxicity or remittent severe adverse events that can be attributed to the study treatment.

Background therapy: -

Evidence for comparator:

Treatment with cytoreductive surgery (ZRC) and hyperthermic intraperitoneal chemotherapy (HIPEC) expects a significant increase in survival time. The decision to use cytoreductive surgery is based on the idea of maximum tumor load reduction, which brings with it an improved response to intraperitoneal chemotherapy as well as the reduced likelihood of passage disorder due to intra-abdominal tumor progression. In order to create the best possible conditions for this, all patients are chemotheraped preoperatively before the main procedure.

Actual start date of recruitment	04 March 2014
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Scientific research, Safety
Long term follow-up duration	30 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 105
Worldwide total number of subjects	105
EEA total number of subjects	105

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	78
From 65 to 84 years	27
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Patients with gastric cancer incl. adenocarcinoma of the esophagogastric junction and peritoneal carcinomatosis without any distant metastases with exception of Krukenberg tumors were recruited from March 2014 to June 2018

### Pre-assignment

Screening details:

282 patients were screened

Peritoneal staging and the possibility of reduction (80% of the tumour) in line with cytoreductive surgery was evaluated at screening.

### Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm A

Arm description:

No HIPEC

Arm type	Active comparator
Investigational medicinal product name	Epirubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Infusion

Dosage and administration details:

Patients with negative or unknown HER-2 status received

50 mg/m<sup>2</sup> i.v. (max. 100 mg), Day 1

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Infusion

Dosage and administration details:

Patients with negative or unknown HER-2 status received

130 mg/m<sup>2</sup> i.v. (max. 260 mg), Day 1

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

Investigational medicinal product name	Capecitabin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

**Dosage and administration details:**

Patients with negative or unknown HER-2 status received

625 mg/m<sup>2</sup> p.o. (2x daily, max. 2500 mg total), Day 1-21

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Infusion

**Dosage and administration details:**

Patients with POSITIVE HER-2 status received

80 mg/m<sup>2</sup> i.v. Day 1 (max. 160 mg)

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

Investigational medicinal product name	Capecitabin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

**Dosage and administration details:**

Patients with POSITIVE HER-2 status received

1000 mg/m<sup>2</sup> p.o. (2x daily, max. 4000 mg total), Day 1-14

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Infusion

**Dosage and administration details:**

Patients with POSITIVE HER-2 status received

8 mg/kg i.v. Day 1 (first cycle, from second cycle 6 mg/kg)

In 3 cycles of chemotherapy (2-3 weeks after the end of the last cycle) before cytoreductive surgery and 3 cycles of postoperative systemic chemotherapy (2-3 weeks after the end of the last cycle) 4-12 weeks after surgery

<b>Arm title</b>	Arm B
------------------	-------

**Arm description:**

HIPEC

Arm type	Experimental
Investigational medicinal product name	Mitomycin C
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intraperitoneal use

**Dosage and administration details:**

15 mg/m<sup>2</sup> (max. 30 mg, max. 5 L Perfusat) intraoperative

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Powder for infusion
Routes of administration	Intraperitoneal use

Dosage and administration details:

75 mg/m<sup>2</sup> (max. 150 mg, max. 5 L Perfusat) intraoperative

<b>Number of subjects in period 1</b>	Arm A	Arm B
Started	53	52
Completed	53	52

## Baseline characteristics

### Reporting groups

Reporting group title	Arm A

## End points

### End points reporting groups

Reporting group title	Arm A
Reporting group description: No HIPEC	
Reporting group title	Arm B
Reporting group description: HIPEC	

### Primary: Primary end point

End point title	Primary end point <sup>[1]</sup>
End point description:	
End point type	Primary
End point timeframe: Randomisation until last patient out	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: For a full description of the trial analyses, please see trial synopsis, uploaded together with the posting of this results report.

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	22	27		

### Statistical analyses

No statistical analyses for this end point

### Secondary: 30-days complication rate

End point title	30-days complication rate
End point description: 30-days complication rate after cytoreductive surgery with or without HIPEC	
End point type	Secondary
End point timeframe: 30 days after cytoreductive surgery	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	53	52		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Time to progress

End point title	Time to progress
End point description:	
Time to verifiable progress of tumor	
End point type	Secondary
End point timeframe:	
From randomisation to last patient out	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	35	36		

### Statistical analyses

No statistical analyses for this end point

### Secondary: Time to metastases

End point title	Time to metastases
End point description:	
Time of appearance of elsewhere localised metastases	
End point type	Secondary
End point timeframe:	
From randomisation to last patient out	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	51	49		
Units: whole	34	31		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Quality of life

End point title	Quality of life
End point description:	
Quality of life	
End point type	Secondary
End point timeframe:	
Before surgery, begin of 4th chemotherapy cycle, begin of 6th chemotherapy cycle, Follow-up 3 months after end of therapy, Follow-up 6 months after end of therapy	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	53	52		

## Statistical analyses

No statistical analyses for this end point

## Secondary: toxicity and adverse events

End point title	toxicity and adverse events
End point description:	
Frequency of toxicity and adverse events	
End point type	Secondary
End point timeframe:	
From begin of treatment to last patient out	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	38	42		

## Statistical analyses

No statistical analyses for this end point

### Secondary: surgical and therapeutic intervention

End point title	surgical and therapeutic intervention
End point description:	
Frequency of required surgical and therapeutic intervention	
End point type	Secondary
End point timeframe:	
After cytoreductive surgery upto 2.5 years	

End point values	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	22 <sup>[2]</sup>	28 <sup>[3]</sup>		
Units: whole	4	5		

Notes:

[2] - Numbers given exclusively for patients with complete cyto reduction

[3] - Numbers given exclusively for patients with complete cyto reduction

## Statistical analyses

No statistical analyses for this end point

### Secondary: hospitalization

End point title	hospitalization
End point description:	
Duration of total hospitalization	
End point type	Secondary
End point timeframe:	
During 2.5 years after randomisation	

<b>End point values</b>	Arm A	Arm B		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	53	52		
Units: whole	53	51		

### Statistical analyses

---

No statistical analyses for this end point

## Adverse events

---

### Adverse events information<sup>[1]</sup>

---

Timeframe for reporting adverse events:

Start of treatment until last performed follow-Up

Assessment type	Systematic
-----------------	------------

---

### Dictionary used

---

Dictionary name	MedDRA
-----------------	--------

---

Dictionary version	22.1
--------------------	------

---

Frequency threshold for reporting non-serious adverse events: 5 %

---

### Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: Please see the list of AEs related and not related to the IMP in the trial synopsis, uploaded together with the posting of this results report.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 August 2013	Change of coordinating investigator biobanking added Change in the composition of the DMC Change in selection criteria Change in tehrapy for HER-2 positive patients Some changes in definitions

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
