Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 June 2009
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	26 June 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety of every other week dosing of velaglucerase alfa (GA-GCB) in subjects with type 1 Gaucher disease who were previously treated with imiglucerase.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origins in the Declaration of Helsinki. It was also conducted in accordance with local country regulations and International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) E6 guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 July 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Israel: 9
Country: Number of subjects enrolled	United States: 23
Worldwide total number of subjects	41
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	2
Adolescents (12-17 years)	7
Adults (18-64 years)	28

From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The first subject was enrolled on 25 July 2007 and the last subject completed on 26 June 2009. Subjects received the same dose of velaglucerase alfa (GA-GCB) as their previous dose of imiglucerase (range- \leq 60 Unit per kilogram (U/kg) - \geq 15 U/kg) every other week via intravenous infusion.

Pre-assignment

Screening details:

Subjects at least 2 years old with documented diagnosis of type 1 Gaucher disease. Consistent treatment (every other week at a dose \leq 60 U/kg and \geq 15 U/kg) with imiglucerase for at least 30 consecutive months; same dose during the 6 months prior to study enrollment. Minor dosing interval variance was allowed per standard clinical practice.

Period 1

Period 1 title	GA-GCB (Velaglucerase Alfa) (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	GA-GCB (Velaglucerase Alfa)
-----------	-----------------------------

Arm description:

15-60 unit per kilogram (U/kg), every other week via intravenous infusion

Arm type	Experimental
Investigational medicinal product name	GA-GCB (velaglucerase alfa)
Investigational medicinal product code	
Other name	VPRIV®, GA-GCB, gene-activated® human glucocerebrosidase
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

15-60 U/kg, every other week via intravenous infusion

Number of subjects in period 1 ^[1]	GA-GCB (Velaglucerase Alfa)
Started	40
Completed	38
Not completed	2
Consent withdrawn by subject	1
Adverse event	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: All enrolled (N=41) subjects were not treated with study drug. Since baseline period included only treated (N=40) subjects, the worldwide number enrolled in the trial differs with the number of subjects reported in the baseline period.

Baseline characteristics

Reporting groups

Reporting group title	GA-GCB (Velaglucerase Alfa)
-----------------------	-----------------------------

Reporting group description:

15-60 U/kg, every other week via intravenous infusion

Reporting group values	GA-GCB (Velaglucerase Alfa)	Total	
Number of subjects	40	40	
Age categorical			
Units: Subjects			
<=18 years	9	9	
Between 18 and 65 years	27	27	
>=65 years	4	4	
Age continuous			
Units: years			
arithmetic mean	35.6		
standard deviation	± 18.37	-	
Gender categorical			
Units: Subjects			
Female	22	22	
Male	18	18	
Baseline hemoglobin concentration			
Units: gram per deciliter (g/dL)			
median	13.775		
full range (min-max)	10.4 to 16.45	-	
Baseline liver volume			
Units: Percent (%) body weight			
median	1.9		
full range (min-max)	1.4 to 3.9	-	
Baseline spleen volume			
Units: Percent (%) body weight			
median	0.5		
full range (min-max)	0.2 to 3.2	-	
Baseline platelet count			
Units: 10 ⁹ per litre (10 ⁹ /L)			
median	162		
full range (min-max)	29 to 399	-	

End points

End points reporting groups

Reporting group title	GA-GCB (Velaglucerase Alfa)
Reporting group description: 15-60 unit per kilogram (U/kg), every other week via intravenous infusion	

Primary: Subjects Who Experienced at Least One Adverse Event

End point title	Subjects Who Experienced at Least One Adverse Event ^[1]
-----------------	--

End point description:

Safety was assessed throughout the study by assessments including adverse events, concomitant medication use, and vital signs. Additional safety assessments, including 12-lead ECGs, physical examinations, clinical laboratory tests and determination of the presence of anti-velaglucerase alfa antibodies.

Safety population included subjects who have received at least 1 full or partial dose of study drug.

Refer to Adverse event section for further details.

End point type	Primary
----------------	---------

End point timeframe:

Week 53

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses for this end point

End point values	GA-GCB (Velaglucerase Alfa)			
Subject group type	Reporting group			
Number of subjects analysed	40			
Units: subjects				
Experienced at Least One Adverse Event	34			

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline to Week 53 in Hemoglobin Concentration

End point title	Change From Baseline to Week 53 in Hemoglobin Concentration

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Time of informed consent until 30 days after the last dose and/or until the event was resolved/stabilized or outcome was reached, whichever came first. Subjects who discontinued/withdrew prior to Week 53, AEs were followed up to 30 days after last dose

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 October 2007	<ul style="list-style-type: none">•Inclusion Criterion changed, requiring male subjects to use a medically acceptable method of birth control throughout their participation in the study and to report any pregnancy of a partner.•Exclusion Criterion was rewritten to clarify that exclusion required both a hemoglobin of less than equal to (\leq) 10 g/dL and a platelet count of $\leq 80 \times 10^3$ platelets/cubic millimetre(mm³).•Anaphylactoid reaction during treatment with imiglucerase in addition to anaphylactic reaction as a reason for exclusion from the study.•Expanded exclusion of erythropoietin to exclusion of any red cell growth factor and allowed the use of inhaled corticosteroid therapy.•Provided clarification that a spleen infarction was required to be active and clinically significant, experienced within 12 months of screening, and radiologically confirmed to be a reason for exclusion from the study and splenectomized subjects were not to be excluded.•Provided clarification that bone necrosis was to be worsening bone necrosis within 12 months of screening; inactive or stable bone necrosis was not intended to be an exclusion.•Pregnant or lactating subjects were excluded.•The following assessments were added to screening procedures: chitotriosidase genotyping, vital signs, and serum B12 and folic acid concentrations.•After each of the first 3 infusions, a safety telephone call from the Investigator to the subject 1 day after infusion was added to the protocol.•Infusion time was changed from the same infusion time as the previous imiglucerase dose to a 1-hour infusion. Longer infusion times were to be documented.•Transition to home therapy no longer required approval by the Shire HGT Medical Monitor but was left to the discretion and direction of the Investigator.•Reticulocyte count was to be performed at the site's local laboratory rather than a central laborator due to stability issues.•Imaging of the femoral neck was added to the dual-energy x-ray absorptiometry (DXA) assessment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
