Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 April 2009
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 February 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the efficacy of Brivaracetam (BRV) at doses of 20, 50, and 100 mg/day in reducing seizure frequency in subjects with partial onset seizures not fully controlled despite optimal treatment with 1 to 2 concomitant antiepileptic drug(s) (AED(s)), compared with Placebo (PBO).

Protection of trial subjects:

Standard measures to minimize pain and distress.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	10 September 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	8 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 6
Country: Number of subjects enrolled	Finland: 11
Country: Number of subjects enrolled	France: 60
Country: Number of subjects enrolled	Germany: 41
Country: Number of subjects enrolled	Hungary: 12
Country: Number of subjects enrolled	India: 91
Country: Number of subjects enrolled	Italy: 20
Country: Number of subjects enrolled	Netherlands: 7
Country: Number of subjects enrolled	Poland: 108
Country: Number of subjects enrolled	Spain: 22
Country: Number of subjects enrolled	Switzerland: 15
Country: Number of subjects enrolled	United Kingdom: 6
Worldwide total number of subjects	399
EEA total number of subjects	293

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	5
Adults (18-64 years)	383
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study started to enroll subjects in September 2007 and concluded in February 2009.

Pre-assignment

Screening details:

Participant Flow refers to the Randomized Set.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Matching Placebo tablets administered twice a day

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Matching Placebo to Brivaracetam tablets.

Arm title	Brivaracetam 20 mg/day
------------------	------------------------

Arm description:

Brivaracetam 20 mg/day, 10 mg administered twice a day

Arm type	Experimental
Investigational medicinal product name	Brivaracetam
Investigational medicinal product code	BRV
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

10 mg and 25 mg tablets. Two equal intakes, morning and evening, in a double-blinded way for the 12-week Treatment Period.

Arm title	Brivaracetam 50 mg/day
------------------	------------------------

Arm description:

Brivaracetam 50 mg/day, 25 mg administered twice a day

Arm type	Experimental
Investigational medicinal product name	Brivaracetam
Investigational medicinal product code	BRV
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

10 mg and 25 mg tablets. Two equal intakes, morning and evening, in a double-blinded way for the 12-week Treatment Period.

Arm title	Brivaracetam 100 mg/day
Arm description: Brivaracetam 100 mg/day, 50 mg administered twice a day	
Arm type	Experimental
Investigational medicinal product name	Brivaracetam
Investigational medicinal product code	BRV
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

10 mg and 25 mg tablets. Two equal intakes, morning and evening, in a double-blinded way for the 12-week Treatment Period.

Secondary: Patient's Global Evaluation Scale (P-GES) evaluated at Last Visit or Early Discontinuation Visit

End point title	Patient's Global Evaluation Scale (P-GES) evaluated at Last Visit or Early Discontinuation Visit
-----------------	--

End point description:

The Patient's Global Evaluation Scale (P-GES) is a global assessment of the disease evolution which was performed using a seven-point scale (1 = Marked worsening to 7 = Marked improvement) with the start of the study medication as the reference time point. The subject not mentally impaired had to complete it by answering the following question: "Overall, has there been a change in your seizures since the start of the study medication?"

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) were collected up to 23 weeks from Visit 1 (Week -8) to the Safety Visit (Week 15).

Adverse event reporting additional description:

Adverse Events (AEs) refer to the Safety Set (SS) population which contains the same set of subjects as the Intention-To-Treat (ITT) population.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 February 2007	<p>Protocol amendment 1 was issued on 02 Feb 2007. The following changes were implemented; no subjects were enrolled at the time:</p> <ul style="list-style-type: none">• A storage period of up to 20 years was proposed for the DNA samples in order to have the possibility to re-evaluate a possible correlation between SV2 (A, B, and C) gene variations and treatment response if, and when, new mutations are found to be relevant to SV2 pharmacogenomics. The initial genotyping will occur during the conduct of the study, but there is high likelihood that new mutations in SV2A, B or C will be found over the subsequent years as this is a rapidly evolving area. In addition, it will be of interest to examine the genetic variability in other disease-related genes of possible relevance for epileptic disorders and in genes related to SV2 biology.• The rationale for collecting the race has been added according to legal requirement in some countries.• Clarification of the electrocardiogram (ECG) tracings retrieval has been added to include the following text: Copies of all ECG tracings will be retrieved for all subjects presenting treatment-emergent, clinically significant abnormalities during the study.
08 May 2007	<p>A protocol amendment was issued on 08 May 2007 in response to Food and Drug Administration (FDA) feedback on the N01253 final protocol, which was identical in design to N01252. The following changes were implemented; no subjects were enrolled at the time:</p> <ul style="list-style-type: none">• An additional 1 week step at 20 mg/day was added to the Down-Titration Period for subjects on 50 mg/day or on 100 mg/day.• A clinic visit was added 2 weeks after randomization which included a complete safety evaluation (including laboratory analysis and ECGs).• Microscopy evaluations for all urinalysis assessments were added at clinic visits when urinalysis samples were taken. <p>Other changes implemented in this amendment included:</p> <ul style="list-style-type: none">• Details of the statistical methods used to analyze the Type IC/Type I seizure frequency ratio were removed from the protocol. A reference to the Statistical Analysis Plan (SAP) was added.• The definition of a completed subject was clarified. A subject completed the study if either he/she was randomized, underwent the Evaluation Visit (V) (V7), did not have any Early Discontinuation Visit (EDV), and entered the LTFU; or was randomized, underwent the Evaluation Visit (V7) and Safety Visit (SV), did not have any EDV, and did not enter the LTFU. Otherwise the subject was to be considered discontinued.• Specifications for the handling of missing data for primary efficacy analysis on the Intent-to-Treat (ITT) Population analyses were added. The primary efficacy analysis assumes that subjects who prematurely withdrew from the Treatment Period had the same seizure frequency for the remaining unobserved period. In addition, a sensitivity analysis was further described in the SAP.• Additional instructions for blood sampling volumes for laboratory assessments and genotyping were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
