

## Clinical trial results:

### AN OPEN-LABEL SUNITINIB MALATE (SU011248) CONTINUATION PROTOCOL FOR PATIENTS WHO HAVE COMPLETED A PRIOR SUNITINIB STUDY AND ARE JUDGED BY THE INVESTIGATOR TO HAVE THE POTENTIAL TO BENEFIT FROM SUNITINIB TREATMENT

#### Summary

EudraCT number	2006-006538-16
Trial protocol	DE BE FR DK GB NL BG ES
Global end of trial date	12 September 2014

#### Results information

Result version number	v1 (current)
This version publication date	05 April 2016
First version publication date	14 August 2015

#### Trial information

##### Trial identification

Sponsor protocol code	A6181114
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00428220
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Pfizer Inc.
Sponsor organisation address	235 East 42nd Street, New York, United States, NY 10017
Public contact	Pfizer ClinicalTrials.gov Call Center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com
Scientific contact	Pfizer ClinicalTrials.gov Call Center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 February 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 September 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

- To provide access to sunitinib treatment for subjects who had participated in previous "parent" or extension sunitinib protocols and who had the potential as judged by the investigator to derive clinical benefit from sunitinib treatment.
- To assess the long-term safety and tolerability of sunitinib.
- To assess the duration of clinical benefit for subjects taking sunitinib.

Protection of trial subjects:

This study was designed and monitored in accordance with Pfizer's and the contract research organization's standard operating procedures (SOPs), which comply with the ethical principles of Good Clinical Practice (GCP) as required by the major regulatory authorities, and in accordance with the Declaration of Helsinki. Pfizer Compliance Oversight Leads (COLs) provided study and site level oversight to ensure that the study was delivered to high quality standards. COLs performed on-site and remote oversight to assess monitoring effectiveness and ensure compliance with the study protocol by investigational sites according to ICH-GCP, applicable SOPs, and local regulations.

Background therapy:

This was an open-label continuation or extension protocol. The protocol permitted continued access to sunitinib for participants who had participated in a previous parent or extension sunitinib study and who had been judged by the investigator to have had the potential to derive clinical benefit from continuing sunitinib dosing.

Evidence for comparator: -

Actual start date of recruitment	13 July 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Brazil: 13
Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	Colombia: 3
Country: Number of subjects enrolled	Hong Kong: 10
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 22
Country: Number of subjects enrolled	Mexico: 10
Country: Number of subjects enrolled	Philippines: 1
Country: Number of subjects enrolled	Singapore: 4
Country: Number of subjects enrolled	Taiwan: 18
Country: Number of subjects enrolled	United States: 14
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 11

Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	France: 49
Country: Number of subjects enrolled	Germany: 17
Country: Number of subjects enrolled	Argentina: 9
Country: Number of subjects enrolled	Australia: 12
Worldwide total number of subjects	223
EEA total number of subjects	95

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	169
From 65 to 84 years	54
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

In this open-label extension study, access to sunitinib was provided to participants who had participated in a previous parent study and who had been judged by the investigator to have likely clinical benefit from continuing sunitinib dosing.

### Pre-assignment

Screening details:

Participants receiving sunitinib in previous studies began treatment in this study with the last dose they were taking in the parent or extension study. Participants were to continue to access sunitinib on this protocol as long as there was evidence of disease control and/or clinical benefit in the judgment of the investigator.

### Pre-assignment period milestones

Number of subjects started	226 <sup>[1]</sup>
Number of subjects completed	223

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Long-time follow-up of previous study: 3
----------------------------	--

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Of the 226 participants screened, 3 participants were not treated since they were only in long-time follow-up of their parent study. Hence, 223 participants were treated and received at least 1 dose of study drug.

### Period 1

Period 1 title	Sunitinib (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Arm title	Sunitinib
-----------	-----------

Arm description:

Participants receiving treatment on single-agent sunitinib on continuous dosing regimens returned for study visits at Day 28, and every 8 weeks thereafter. Participants on regimens other than single-agent sunitinib on continuous dosing followed the schedule of activities from their parent or extension protocol. Sunitinib-naïve participants (ie, those not treated with sunitinib in the previous parent study) received a starting dose of 37.5 mg sunitinib once daily.

Arm type	Experimental
Investigational medicinal product name	Sunitinib malate
Investigational medicinal product code	SU011248
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

All participants received open-label sunitinib and took orally without regard to meals beginning on Day 1 of the study. Participants receiving treatment on single-agent sunitinib on continuous dosing regimens returned for study visits at Day 28, and every 8 weeks thereafter. Participants on regimens other than single-agent sunitinib on continuous dosing followed the schedule of activities from their parent or extension protocol. Sunitinib-naïve participants (ie, those not treated with sunitinib in the previous parent study) received a starting dose of 37.5 mg sunitinib once daily.

<b>Number of subjects in period 1</b>	Sunitinib
Started	223
Completed	0
Not completed	223
Global deterioration of health status	7
Adverse event, non-fatal	51
Participant died	8
Participant refused continued treatment	7
Other reasons	23
Lost to follow-up	4
Objective progression or relapse	123

## Baseline characteristics

### Reporting groups

Reporting group title	Sunitinib
-----------------------	-----------

Reporting group description:

Participants receiving treatment on single-agent sunitinib on continuous dosing regimens returned for study visits at Day 28, and every 8 weeks thereafter. Participants on regimens other than single-agent sunitinib on continuous dosing followed the schedule of activities from their parent or extension protocol. Sunitinib-naïve participants (ie, those not treated with sunitinib in the previous parent study) received a starting dose of 37.5 mg sunitinib once daily.

Reporting group values	Sunitinib	Total	
Number of subjects	223	223	
Age categorical			
Units: Subjects			
Adults (18-64 years)	169	169	
From 65-84 years	54	54	
85 years and over	0	0	
Age continuous			
Units: years			
arithmetic mean	55.2		
standard deviation	± 12.5	-	
Gender categorical			
Demographic data is presented in safety population set. The safety population was defined as all participants enrolled in the study who received at least one dose of study drug in this study.			
Units: Subjects			
Female	130	130	
Male	93	93	

## End points

### End points reporting groups

Reporting group title	Sunitinib
Reporting group description:	
Participants receiving treatment on single-agent sunitinib on continuous dosing regimens returned for study visits at Day 28, and every 8 weeks thereafter. Participants on regimens other than single-agent sunitinib on continuous dosing followed the schedule of activities from their parent or extension protocol. Sunitinib-naïve participants (ie, those not treated with sunitinib in the previous parent study) received a starting dose of 37.5 mg sunitinib once daily.	

### Primary: Number of Participants With Treatment-emergent (All Causalities) - Safety Population

End point title	Number of Participants With Treatment-emergent (All Causalities) - Safety Population <sup>[1]</sup>
-----------------	---

End point description:

Assessment of adverse events (AEs) included type, incidence, severity (graded by the National Cancer Institute [NCI] Common Terminology Criteria for Adverse Events [CTCAE], Version 3.0, timing, seriousness, and relatedness; and laboratory abnormalities. The safety population was defined as all participants enrolled in the study who received at least one dose of study drug in this study.

End point type	Primary
----------------	---------

End point timeframe:

From first day of treatment on the current study up to 28 days post the last dose of study treatment

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis provided for Number of Participants With Treatment-emergent Adverse Events (AEs) (All Causalities)

End point values	Sunitinib			
Subject group type	Reporting group			
Number of subjects analysed	223			
Units: participants				
Participants with AEs	221			
Participants with serious adverse events (SAE)	90			
Participants with grade 3 or 4 AEs	174			
Participants with grade 5 AEs	24			
Participants discontinued due to AEs	67			
Participants with dose reduction due to AEs	66			
Temporary discontinuations due to AEs	146			

### Statistical analyses

No statistical analyses for this end point

### Primary: Number of Participants With Treatment-emergent AEs (Treatment-Related)

End point title	Number of Participants With Treatment-emergent AEs
-----------------	--

End point description:

Assessment of AEs included type, incidence, severity (graded by the NCI CTCAE, Version 3.0), timing, seriousness, and relatedness; and laboratory abnormalities.

End point type Primary

End point timeframe:

From first day of treatment on the current study up to 28 days post the last dose of study treatment

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis provided for Number of Participants With Treatment-emergent AEs (Treatment-Related)

End point values	Sunitinib			
Subject group type	Reporting group			
Number of subjects analysed	223			
Units: participants				
Participants with AE	217			
Participants with SAE	39			
Participants with grade 3 or 4 AEs	146			
Participants with grade 5 AEs	0			
Participants discontinued due to AEs	29			
Participants with dose reduction due to AEs	64			
Temporary discontinuations due to AEs	135			

## Statistical analyses

No statistical analyses for this end point

## Other pre-specified: Summary of Duration of Clinical Benefit

End point title Summary of Duration of Clinical Benefit

End point description:

The mean duration of clinical benefit summarized by parent studies ranged from 22.1 weeks (range 0.6 to 128.3 weeks) in parent study A6181107 (69 participants) to 227.5 weeks (range 186.6 to 268.4 weeks) in parent study A6181170 (2 participants).

End point type Other pre-specified

End point timeframe:

From the first day of treatment on the parent protocol until the end of sunitinib treatment in this study for sunitinib treated participants. Length of time in this study for participants on placebo or comparator drug.

End point values	Sunitinib			
Subject group type	Reporting group			
Number of subjects analysed	223			
Units: Weeks	0			

## **Statistical analyses**

---

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From first day of treatment on the current study up to 28 days post the last dose of study treatment

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one participant and as nonserious in another participant, or one participant may have experienced both a serious and nonserious event during the study.

Assessment type	Non-systematic
-----------------	----------------

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 April 2007	Protocol Amendment 1 contained revisions due to UK regulations, specifically contraception needed to be defined as double barrier contraception. Secondly, serum and urine pregnancy tests prior to enrollment were specified.
13 August 2008	Protocol Amendment 2 contained revisions to: schedule of activities, study procedures and assessments (ie, urinalysis, MUGA or ECHO, ECG); introduction to include additional information; clarification of study objectives (adding an additional endpoint with regards to follow-up efficacy endpoints in previous sunitinib studies contributing to study A6181114), endpoints and study design (clarification of treatment doses for sunitinib-treated and sunitinib-naïve subjects); inclusion and exclusion criteria to reflect updated safety information in the Investigator's Brochure; clarification of study treatments; update information on AE reporting, clarify data analysis, updated ethics, definition of end of study, publication of study results, appendices (ie, Appendix 1 to include magnesium and urinalysis and updates to thyroid function testing guidance; Appendix 2 to include Response Evaluation Criteria In Solid Tumors (RECIST) and to delete Eastern Cooperative Oncology Group Performance Status [ECOG PS]; Appendix 3 to include most recent NCI CTCAE). In addition administrative changes were made.
17 May 2011	Protocol Amendment 3 contained modifications in order to allow for the inclusion of participants from a number of closing parent and extension studies and the update of protocol required text: Added/changed indications for additional parent/extension studies rolling-over participants. Included the EMA approval text for the pancreatic neuroendocrine tumor indication. In regards to study design and inclusion criteria, added the following new protocols contributing participants: A6181030, A6181064, A6181078, A6181094, A6181113, A6181120 and A6181170. Inclusion of the OS endpoint and logistics for collection of survival data for participants originating from study A6181111. Inclusion of text indicating participants on other regimens have the option (per clinical judgment) of following their parent protocol, extension protocol, or A6181114 schedule of activities and guidance on dose, dose escalation, and de-escalations. Inclusion of text to address study treatment coverage for participants on combination therapies. Inclusion of 12.5 mg dose for roll-over participants taking this dose. Inclusion of supplemental text for cases of drug-induced liver injury. Inclusion of text regarding the analyses of clinical benefit for roll-over participants who were previously on sunitinib in a parent or extension study.
21 June 2012	Protocol Amendment 4 contained revisions to: clarify language, indications, contributing protocol study numbers, ensure consistency, participant withdrawal, storage conditions, pregnancy tests, requirement for follow-up of AEs, serious AE (SAE) criteria, AEs, laboratory abnormalities, subject's legal representative, additional laboratory analyses in presence of Hy's Law cases.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
