

Clinical trial results:

A phase III, open, randomized, controlled study to demonstrate the immunogenicity, reactogenicity and safety of GSK Biologicals meningococcal serogroup ACWY conjugate vaccine (GSK134612, MenACWY-TT) co-administered with Infanrix hexa compared to individual administration of each vaccine, in healthy 12-through 23-month-old children

Summary

EudraCT number	2006-006680-23

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 April 2009
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 May 2008
Global end of trial reached?	Yes
Global end of trial date	27 October 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

In subjects of the MenACWY-TT + Infanrix hexa and MenACWY-TT groups:

To demonstrate the non-inferiority of the MenACWY-TT conjugate vaccine co-administered with combined DTPa-HBV-IPV/Hib vaccine to the MenACWY-TT conjugate vaccine given alone in terms of serum bactericidal antibodies (rSBA) for *N. meningitidis* serogroups A, C, W-135, and Y.

In subjects of the MenACWY-TT + Infanrix hexa and Infanrix hexa groups:

To demonstrate the non-inferiority of the combined DTPa-HBV-IPV/Hib vaccine co-administered with MenACWY-TT conjugate vaccine to DTPa-HBV-IPV/Hib vaccine given alone in terms of geometric mean concentrations (GMCs) of antibodies to pertussis toxoid (PT), filamentous haemagglutinin (FHA), pertactin (PRN), percentages of subjects with antibody concentrations to PRP greater than or equal to (\geq) 1.0µg/ml and to HBsAg \geq 10mIU/ml.

Protection of trial subjects:

All subjects were supervised for 30 min after vaccination/product administration with appropriate medical treatment readily available. Vaccines/products were administered by qualified and trained personnel. Vaccines/products were administered only to eligible subjects that had no contraindications to any components of the vaccines/products. Subjects were followed-up for 30 days after the last vaccination/product administration.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 August 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 120
Country: Number of subjects enrolled	Germany: 598
Country: Number of subjects enrolled	Greece: 75
Worldwide total number of subjects	793
EEA total number of subjects	793

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	793
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Nimenrix + Infanrix-hexa Group

Arm description:

Subjects received concomitant administration of 1 dose of Nimenrix and Infanrix-hexa vaccines at Day 0.

Arm type	Experimental
Investigational medicinal product name	Nimenrix
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the left thigh at Day 0.

Investigational medicinal product name	Infanrix Hexa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the right thigh at Day 0.

Arm title	Nimenrix Group
------------------	----------------

Arm description:

Subjects received a single dose of Nimenrix vaccine at Day 0, followed one month later by 1 dose of Infanrix-hexa vaccine.

Arm type	Experimental
Investigational medicinal product name	Nimenrix
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the left thigh at Day 0.

Investigational medicinal product name	Infanrix-hexa
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Injection
Routes of administration	Intramuscular use
Dosage and administration details:	
Single dose intramuscular injection into the right thigh at Month 1.	

Arm title	Infanrix-Hexa Group
------------------	---------------------

Arm description:

Subjects received a single dose of Infanrix-Hexa vaccine at Day 0, followed one month later by 1 dose of Nimenrix vaccine.

Arm type	Experimental
Investigational medicinal product name	Infanrix-hexa
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the right thigh at Day 0.

Investigational medicinal product name	Nimenrix
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the left thigh at Month 1.

Arm title	Meningitec Group
------------------	------------------

Arm description:

Subjects received 1 dose of Meningitec vaccine at Day 0 and were permitted to receive the routinely recommended Infanrix-hexa booster once the active safety follow-up of this study was completed.

Arm type	Active comparator
Investigational medicinal product name	Meningitec
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose intramuscular injection into the left thigh at Day 0.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAEs were reported throughout the entire study period (Day 0 - Month 7). Solicited symptoms were reported during a 4-day period (Day 0-Day 3) after any vaccine dose, while unsolicited AEs were collected within 31 days (Days 0-30) after vaccination.

Adverse event reporting additional description:

The solicited local and general symptoms were only collected for those subjects who filled-in their symptom sheets.
