

Clinical trial results:

A multi-center, double-blind, historical control, randomized conversion to monotherapy study with Keppra XR for treatment of partial onset seizures

Summary

EudraCT number	2007-000897-21
Trial protocol	PL
Global end of trial date	14 September 2009

Results information

Result version number	v1 (current)
This version publication date	28 June 2016
First version publication date	02 August 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
--	-----

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 November 2009
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 September 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the efficacy of Keppra extended release (XR) compared with a historical control, in the conversion to monotherapy treatment of partial onset seizures.

Protection of trial subjects:

Not applicable

Background therapy:

Standard antiepileptic drug (AED) therapy

Evidence for comparator:

Other AEDs based on historical control

Actual start date of recruitment	06 August 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Mexico: 60
Country: Number of subjects enrolled	Poland: 67
Country: Number of subjects enrolled	Russian Federation: 64
Country: Number of subjects enrolled	United States: 37
Worldwide total number of subjects	228
EEA total number of subjects	67

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	31
Adults (18-64 years)	194
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The Efficacy (EFF) population is defined as all subjects in the Intent-to-Treat (ITT) population who enter into the Previous Antiepileptic (AED) Discontinuation (D/C) Phase. The Per Protocol (PP) population consists of all subjects in the EFF population who have no important protocol deviations related to efficacy.

Pre-assignment

Screening details:

Subjects are to be randomized into treatment with either Keppra XR 2000 mg/day or Keppra XR 1000 mg/day in a 3:1 ratio.

303 subjects were screened/enrolled and 228 randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Keppra XR 1000 mg/day

Arm description:

1000 mg/day once daily for 18 weeks (administered as two Keppra XR tablets and two placebo tablets once daily).

Arm type	Experimental
Investigational medicinal product name	Keppra XR
Investigational medicinal product code	Levetriacetam XR
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Keppra XR 1000 mg/day: administered as two Keppra XR tablets and two Placebo tablets once daily
Keppra XR 2000 mg/day: administered as four Keppra XR tablets once daily

Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Matching Placebo Tablet

Arm title	Keppra XR 2000 mg/day
------------------	-----------------------

Arm description:

2000 mg/day once daily for 18 weeks (administered as four Keppra XR tablets once daily).

Arm type	Experimental
Investigational medicinal product name	Keppra XR
Investigational medicinal product code	Levetriacetam XR
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Keppra XR 1000 mg/day: administered as two Keppra XR tablets and two Placebo tablets once daily
Keppra XR 2000 mg/day: administered as four Keppra XR tablets once daily

Number of subjects in period 1	Keppra XR 1000 mg/day	Keppra XR 2000 mg/day
Started	57	171
Completed	50	141
Not completed	7	30
Consent withdrawn by subject	1	5
AE, non-serious non-fatal	2	6
Error determining exit criteria	1	-
Lost to follow-up	-	2
SAE, non-fatal	1	1
Patient non-compliant	-	1
No contact for extended period	-	1
Lack of efficacy	1	-
Protocol deviation	1	14

End points

End points reporting groups

Reporting group title	Keppra XR 1000 mg/day
Reporting group description: 1000 mg/day once daily for 18 weeks (administered as two Keppra XR tablets and two placebo tablets once daily).	
Reporting group title	Keppra XR 2000 mg/day
Reporting group description: 2000 mg/day once daily for 18 weeks (administered as four Keppra XR tablets once daily).	

Primary: The cumulative exit rate at 112 days after the beginning of the previous antiepileptic drug (AED) tapering phase

End point title	The cumulative exit rate at 112 days after the beginning of the previous antiepileptic drug (AED) tapering phase ^[1]
End point description: Cumulative exit rate at day 112, based on the duration between start date of previous AED tapering to the earliest date exit criterion was met; calculated using Kaplan Meier Methods. Subjects prematurely discontinued for reasons unrelated to exit criteria were censored as of last dose of study drug. Subjects who completed without meeting exit criteria were censored at Day 112. Exit criteria include increase in seizure frequency, severity, duration, status epilepticus, or new generalized seizure. Upper 95% 2-sided confidence limit for exit rate is compared to the historical control rate: 0.678.	
End point type	Primary
End point timeframe: 112 days	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to system limitations with studies using an external control, the stat. analysis results could not be entered in this section. The stat. analysis for the prim. and sec. efficacy variable was based on a comparison btw the historical control exit rate (0.678) to the upper limit of the 2-sided 95 % CI for the estimated event rate. If the upper limit of the 95 % CI for the estimate of the event rate for the Keppra arm was less than 0.678, the analysis was positive in favor of the Keppra arm.

End point values	Keppra XR 1000 mg/day	Keppra XR 2000 mg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[2]	158		
Units: proportion of subjects				
number (confidence interval 95%)				
number (95% confidence interval)	(to)	0.375 (0.297 to 0.453)		

Notes:

[2] - Primary Efficacy analysis was conducted for the Keppra XR 2000 mg/day group only.

Statistical analyses

No statistical analyses for this end point

Secondary: The cumulative rate of exit events, which include discontinuation due to exit criteria, withdrawal due to adverse events (AE) and withdrawal due to lack of efficacy, at 112 days after the beginning of previous antiepileptic drug (AED) tapering phase

End point title	The cumulative rate of exit events, which include discontinuation due to exit criteria, withdrawal due to adverse events (AE) and withdrawal due to lack of efficacy, at 112 days after the beginning of previous antiepileptic drug (AED) tapering phase
End point description: The cumulative exit event rate at Day 112 was calculated using Kaplan Meier methods. The exit event rate estimate was based on the duration between the start date of previous AED tapering to the earliest date an exit event occurred. Subjects who prematurely discontinued for reasons unrelated to exit criteria, adverse event, or lack of efficacy were censored as of the last dose of study medication. Subjects who completed the study without having an exit event were censored as of Day 112.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 April 2007	<p>Protocol Amendment 1 (dated 04 Apr 2007) provided for administrative changes, Content changes, and changes to the study design. This amendment was implemented before any subjects were screened for the study.</p> <ul style="list-style-type: none">• The content changes tightened the inclusion/exclusion criteria and were reflective of the criteria indicated in the historical control White Paper or Alternative Monotherapy Design in the Treatment of Epilepsy• The inclusion criterion regarding baseline AED use was modified to 'If taking 2 AEDs, 1 of the baseline AEDs should be taken at less than or equal to 50% of the minimum recommended dose.'• The exclusion criteria were modified as follows:• New criterion added: Seizures that are uncountable due to clustering during the 8-week period prior to Screening (Visit 1) and during the 8-week Baseline Period
04 April 2007	<ul style="list-style-type: none">• Benzodiazepine use. (Original text: Regular use of benzodiazepines or intake of benzodiazepines on more than an occasional basis [more than average once per week])• Use of an investigational drug or device in the 4 months preceding randomization• A sensitivity analysis was added to satisfy anticipated requirements from FDA• Additionally, changes were made to the study design. Rather than utilizing a randomization ratio of 1:1, a ratio of 3:1 was used. This changed the planned sample size to 223 subjects (167 in the 2000 mg/day group and 56 in the 1000 mg/day group). The anticipated number of subjects to be screened was changed to 279. For the statistical analysis, only the 2000 mg/day group was planned to be tested against the historical control. The dose of 2000 mg/day was 90% powered
14 April 2008	<p>Protocol Amendment 2 (dated 14 Apr 2008) provided administrative changes, changes to the Inclusion and Exclusion Criteria section, and changes to the Permitted Concomitant Treatments section due to specific wording inadvertently omitted or documented incorrectly on the previous protocol amendment. This amendment was implemented after 64 subjects had been screened for participation in the study.</p> <p>The change to the inclusion criteria was a modification of the amount of baseline AEDs allowed. Amendment 2 allowed 1 of the baseline AEDs to have been taken at less than or equal to 50% of the minimum recommended dose.</p> <p>The wording for the administration of concomitant antiepileptic medications allowed for tapering off to start at Visit 4 because the visit number was incorrectly documented in original protocol.</p> <p>The CRF page entitled "Subject Eligibility (Inclusion Criteria)" was amended to include additional language noted in this amendment.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
