

Clinical trial results:

A double-blind, randomized, placebo-controlled Phase III study to assess the efficacy of recMAGE-A3 + AS15 Antigen-Specific Cancer Immunotherapeutic as adjuvant therapy in patients with resectable MAGE-A3-positive Non-Small Cell Lung Cancer

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 December 2013
Global end of trial reached?	Yes
Global end of trial date	23 September 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this Phase III study is to demonstrate the clinical efficacy (in terms of disease-free survival) of recMAGE-A3 + AS15 versus placebo in NSCLC after complete surgical resection.

three co-primary objectives are considered:

- Objective A: Efficacy in the overall population;
- Objective B: Efficacy in the population of patients who did not receive adjuvant chemotherapy (no-CT population).
- Objective C: Efficacy in the population of patients presenting the potentially favourable gene signature.

Protection of trial subjects:

Patients were observed closely for at least 30 minutes following treatment, with appropriate medical treatment readily available in case of a rare anaphylactic reaction. MAGE-A3 ASCI/placebo were administered by qualified and trained personnel, only to eligible subjects with no contraindications to any components of these products. During treatment, the following was checked to assess need to postpone treatment: acute disease at time of administration; any systemic grade ≥ 2 Common Terminology Criteria Adverse Event related or possibly related to treatment; fever, defined as an oral, axillary or tympanic temperature $\leq 38^{\circ}\text{C}$; need for influenza vaccine, immunoglobulins and/or any blood products; any medical reason exposing the patient to unacceptable risk. Patients were required to discontinue treatment in case of evidence of disease relapse/occurrence of second primary lung cancer; treatment with either investigational or non-registered product other than MAGE-A3 ASCI study product or other anticancer treatments; anaphylactic reaction following treatment administration; any intolerable adverse event; clinical signs or symptoms indicative of any autoimmune disorder, except vitiligo; appearance of any confirmed or suspected immunosuppressive or immunodeficient condition, or any condition requiring use of any immunosuppressive agent or systemic corticosteroids prescribed for chronic use; inability of the patient to complete study evaluations due to unforeseen circumstances; other conditions indicating the patient's best interest to be withdrawn from treatment. In addition, between the end of the 120-weeks treatment phase, the following follow-up (FU) of patients was also planned: 1) an active FU for survival, recurrence, serious adverse events related to treatment & SAEs related to study participation and concurrent GSK medication of up to 5 years from the 1st treatment, and 2) annual contacts up to 10 years after 1st treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 October 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	8 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1251
From 65 to 84 years	1055
85 years and over	6

Subject disposition

Recruitment

Recruitment details:

A total of 2315 patients were screened towards participation in the study. For 3 of these subjects informed consent forms issues were reported, and thus only 2312 subjects were considered for analyses/results. Out of these 2312 subjects, 2272 were treated with at least one dose of treatment, either MAGE-A3 ASCI study product or placebo solution.

Pre-assignment

Screening details:

2312 patients signed informed consent forms and were screened. Out of these, 2272 patients received at least one dose of study treatment (1515 received MAGE-A3 ASCI and 757 received placebo).

Pre-assignment period milestones

Number of subjects started	2312
Number of subjects completed	2272

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Study treatment not administered: 40
----------------------------	--------------------------------------

Period 1

Period 1 title	Entire Study Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Blinding implementation details:

Because the final establishment of the gene expression signature classifier by testing the samples on the training set was to only start after a positive interim analysis or after the final analysis of DFS in the overall/no-CT population, Disease Free Survival (DFS) in the GS+ population was to be analyzed at a later time point. Therefore, the Sponsor, investigators and patients should remain blinded to the treatment assignment until analysis of DFS in the GS+ population.

Arms

Are arms mutually exclusive?	Yes
Arm title	MAGE-A3 Total/TTP-T Group

Arm description:

Patients received up to 13 doses (D) of MAGE-A3 ASCI, 5 Ds every 3 weeks followed by 8 Ds every 12 weeks. Patients are as per the Total Treated population (TTP) as Treated, or TTP-T, which included patients in the treatment group as per treatment actually received.

Arm type	Experimental
Investigational medicinal product name	recMAGE-A3 recombinant protein formulated in AS15 adjuvant
Investigational medicinal product code	recMAGE-A3 + AS15
Other name	MAGE-A3 ASCI, MAGE-A3 ASCI product, GSK1572932A
Pharmaceutical forms	Powder and suspension for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Up to 13 doses via intramuscular injections in the deltoid or lateral region of the thigh preferably alternating on right and left side.

Arm title	Placebo Total/TTP-T Group
------------------	---------------------------

Arm description:

Patients received up to 13 doses (D) of placebo, 5 Ds every 3 weeks followed by 8 Ds every 12 weeks. Patients are as per the Total Treated population (TTP) as Treated, or TTP-T, which included patients in

the treatment group as per treatment actually received.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	Sucrose reconstituted with an oil-in-water emulsion
Pharmaceutical forms	Powder and suspension for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Up to 13 doses via intramuscular injections in the deltoid or lateral region of the thigh preferably alternating on right and left side.

Number of subjects in period 1^[1]	MAGE-A3 Total/TTP-T Group	Placebo Total/TTP-T Group
Started	1515	757
Completed	763	388
Not completed	752	369
Adverse event, non-fatal	44	12
Disease Progression / Recurrence	449	224
SAE including intercurrent illness	76	42
Unspecified	70	29
Protocol deviation	12	7
Patients remaining ongoing at Data Lock Point	101	55

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of the 2312 enrolled patients, not all started treatment, hence only a part (2272) started the trial.

Statistical analyses

Statistical analysis title	DFS Comparing MAGE-A3 vs placebo – All Patients
-----------------------------------	---

Statistical analysis description:

Analysis compared DFS PYAR between groups for period from 1st treatment dose to DLP. A Cox model was used to evaluate treatment efficacy (TE). TE was calculated as PYAR in MAGE-A3 Total/TTP-R (PYAR1) divided by PYAR in Placebo Total/TTP-R (PYAR2), and weighed for adjustment factors. This comparison in all patients (overall population) also included taking into account stratification by previous CT vs. No-CT treatment and weighing using randomization-minimization factors (RMF) as regressors.

Comparison groups	MAGE-A3 Total/TTP-T Group v Placebo Total/TTP-T Group
Number of subjects included in analysis	2272
Analysis specification	Pre-specified

upper limit	1.179

Notes:

[3] - RMF included: 1) Number of chemotherapy cycles received (1, 2 vs. 3, 4), if any; 2) Pathological stage of the disease (IB vs. II vs. IIIA); 3) Type of lymph-node sampling (minimal lymph-node sampling vs. systematic radical mediastinal lymphadenectomy); 4) ECOG performance status randomization (0, 1 vs. 2); 5) Smoking status (100 cigarettes a lifetime vs. > 100 cigarettes and current smoker vs. > 100 cigarettes and past smoker).

[4] - 2-sided p-value of Likelihood Ratio test from RMF-adjusted Cox regression, Efron method used to handle ties. No-CT population objective reached if p-value < 2.56%/4% in absence/presence of statistically significant effect in No-CT patients per TTP-R.

Secondary: Person year rate (PYAR) as regards disease-free survival (DFS) in the CT population

End point title	Person year rate (PYAR) as regards disease-free survival (DFS) in the CT population
-----------------	---

End point description:

DFS = time interval from randomization to 1st evidence of recurrence/death, if occurring before. All recurrence types were included, including local, regional & distant metastasis & 2nd primary lung cancer (i.e. local recurrence, defined as a tumor within same lung or at bronchial stump; regional recurrence, involving a clinically or radiologically manifest disease in mediastinum or supraclavicular nodes; & distant recurrence [any tumor arising in contralateral lung or outside hemithorax]). Deaths occurring without prior documentation of recurrence were considered as event & not censored. If no event occurred by time of analysis, time to event was censored at last assessment date of patient. New 1ry cancers outside lungs were not considered as event. PYAR = n (=number of subjects reported with at least 1 event) divided by T (=sum of follow-up period [in years] censored at 1st occurrence of event in group). Median DFS estimates were obtained non-parametrically by Kaplan-Meier method.

Secondary: Health-related quality of life (HQL) scores

End point title	Health-related quality of life (HQL) scores
-----------------	---

End point description:

HQL was assessed using the EQ-5D generic health state classification and valuation system. The number and percentage of patients with each score within each dimension of the EQ-5D questionnaire (mobility, self-care, usual activities, pain/discomfort, anxiety/depression) were tabulated at each assessment for each group. Resulting descriptive mean and standard deviation (SD) for the EQ-5D Utility Value (EQ-5D UV) were tabulated. Note that analysis was performed solely on patients who were offered to participate to these analyses, that is, patients enrolled who consented to study participation after Protocol Amendment 1 became effective at their study site and for whom valid EQ-5D data were available. Valid EQ-5D data were defined as questionnaires assessed 1) on day of treatment administration and before administration for time points with a treatment administration; or 2) on day after treatment administration for W0, W6 and W12; or 3) during follow-up visits or at time of recurrence.

End point type	Secondary
End point timeframe:	
At Week (W) 0 on day of treatment (DoT) (W0 DoT), W0 on day post treatment (DpT) (W0 DpT), W6 DoT, W6 DpT, W12 DoT, W12 DpT, Month (M) 6, M9, M12, M24, 6M post W120, at recurrence, and at 12M post W120.

Statistical analyses

No statistical analyses for this end point

Secondary: Number of patients with any adverse events (AEs) and with AEs by maximum grade reported – Up to data lock point (DLP)

End point title	Number of patients with any adverse events (AEs) and with AEs by maximum grade reported – Up to data lock point (DLP)
-----------------	---

End point description:

An AE was any untoward medical occurrence in a patient or clinical investigation subject, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. AEs reported are here below tabulated irrespective of grade, as well as graded by maximum grade reported according to the Common Terminology Criteria (CTC) Adverse event terminology, version 3.0. Maximum grade reported and tabulated were Grade 1 (G1), G2, G3, G4 and G5. Any here below is defined as irrespective of CTC grade reported.

End point type	Secondary
----------------	-----------

End point timeframe:

Within the 31-day follow-up period post treatment administration, up to data lock point (DLP) on 23 January 2014.

End point values	MAGE-A3 Total/TTP-T Group	Placebo Total/TTP-T Group

No statistical analyses for this end point

Secondary: Number of patients with serious adverse events (SAEs) – Up to data lock point (DLP)

End point title	Number of patients with serious adverse events (SAEs) – Up to data lock point (DLP)
-----------------	---

End point description:

A SAE is any untoward medical occurrence that resulted in death, was life-threatening, required hospitalization or prolongation of existing hospitalization, resulted in disability/incapacity, was a congenital anomaly/birth defect in the offspring of a study subject, or was a Grade 4 AE according to CTC for Adverse Events, Version 3.0. Events part of natural course of lung cancer (i.e., disease progression, recurrence) were captured towards clinical efficacy assessment (CEA) and were not reported as SAEs. Death due to a progressive disease was similarly recorded towards CEA, but not as an SAE. However, if progression of lung cancer disease was greater than normally be expected, or if investigators considered that there was a causal relationship between treatment or protocol design/procedures and disease progression/ recurrence, then it was reported as SAE. Any new cancer (non-related to lung cancer) was reported as SAE.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAEs: From screening (SCR) up to database freeze on 23 January 2014 (DLP); AEs: Within the 31-day follow-up period post treatment administration, up to DLP.

Adverse event reporting additional description:

Results presented per group consist of a summary of the events (SAEs and AEs other than SAEs, respectively) reported, compiling overall number of subjects

Assessment type	Non-systematic

Reporting groups

Reporting group title	MAGE-A3 Total/TTP-T Group
-----------------------	---------------------------

Reporting group description:

Patients received up to 13 doses (D) of MAGE-A3 ASCI, 5 Ds every 3 weeks followed by 8 Ds every 12 weeks. Patients are as per the Total Treated population (TTP) as Treated, or TTP-T, which included patients in the treatment group as per treatment actually received.

Reporting group title	Placebo Total/TTP-T Group
-----------------------	---------------------------

Reporting group description:

Patients received up to 13 doses (D) of placebo, 5 Ds every 3 weeks followed by 8 Ds every 12 weeks. Patients are as per the Total Treated population (TTP) as Treated, or TTP-T, which included patients in the treatment group as per treatment actually received.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 November 2010	Amendment 1 included the following changes: 1) Evaluation of efficacy of study treatment in GS+ vs GS- population was upgraded to secondary objective of the trial; 2) Analysis of impact of study treatment on patients' health-related Quality of Life or utility was added as new secondary objective along with corresponding endpoints; 3) New, optional translational research was added including pharmacogenetic testing, DNA demethylation analysis & antigen spreading; 4) Recording of autoimmune diseases as AEs of specific interest was included in protocol & a list of types of diseases/disorders with potential autoimmune causality to be considered established; 5) Hematology & biochemistry safety laboratory tests were added for Week 12 visit; 6) Allowed concomitant medication was changed: a) systemic corticosteroids was prohibited only when prescribed for chronic treatment (more than 7 consecutive days [D]), b) immunoglobulins &/or any blood products administration was allowed provided a minimum of 7D between immunoglobulins &/or blood products & study treatment administration; 7) Study treatment postponement was allowed to permit influenza vaccination in framework of imposed influenza vaccination programs to allow a minimum of 7D between influenza vaccine & study treatment administration; 8) Clarifications were added to protocol (e.g. allowed time intervals for scans, randomization & surgery, clarifications on acceptance of scans, etc.) without changing study procedures; 9) Country specific appendices were included for countries also participating in PRAME-AS15-NSC-001 (ADJ) (GSK ID: 113174) study to allow simultaneous screening for both studies, i.e. both MAGE-A3 & PRAME expression could be tested on the tumor samples. 10) Japan was added as participating country & an appendix with Japan specific requirements was added. 11) Certain information was updated, e.g. contact numbers for emergency code breaking & SAE reporting, description of the ECOG performance status.
18 October 2011	Amendment 2 included the following changes: 1) After trial initiation, a GS at the tumor site associated with a clinical response to MAGE-A3 ASCI was identified in 2 trials in melanoma and lung cancer. This opens the possibility to identify patients likely to benefit from MAGE-A3 ASCI. To clinically validate these GS biomarkers, DFS analysis in patients presenting the GS was added as co-primary (1ry) objective; 2) At the time of the initially planned 1st interim analysis (IA) there would not have been enough events reported in GS+ population to conclude on relevance of GS selection approach. Clinical validation of GS could only be performed on data set available at time of 2nd IA or final analysis (FA). It was decided to remove 1st efficacy IA; 3) In addition, secondary (2ry) endpoints to evaluate OS & lung-cancer-related survival in GS+ and GS- patients were added; 4) Other 2ry objectives were clarified in accordance with addition of above co-1ry objective; 5) Alpha levels assigned to objectives A and B were adapted to take into account correlation between test statistics for no-CT and overall; 6) A weighted Bonferroni-Holm strategy using the closure principle was put in place in case of efficacy claims at the FA; 7) The Wald test was replaced by Likelihood Ratio test as primary test in Cox models, due to that a slight increase in 1-sided type I error is expected when using an unbalanced design together with Wald test; 8) It was clarified that at time of the analyses, 2-sided p-values will be reported & design considerations adapted using 2-sided significance levels; 9) To validate predictive value of GS, an interaction test between MAGE-A3 ASCI vs placebo & GS status was planned; 10) A new criterion for study treatment postponement to allow recovery of possibly related CTC grade ≥ 2 AEs was added; 11) IDMC responsibilities were modified to accommodate that an independent statistician (vs the sponsor) was to provide the FA for review by the IDMC.

06 June 2012	Protocol Amendment 3 included the following changes: 1) At the European Medicines Agency's (EMA) request, GSK Biologicals updated its procedure for emergency unblinding during the conduct of a clinical study; 2) According to the revised procedure, the responsibility and the decision to break the treatment code in emergency situations resided solely with the investigator and consequently, the investigator would have full authority to break the treatment code. Wording in the protocol was adapted accordingly; 3) To ensure the availability of images that could be valuable to the accurate assessment of a patient's disease status, instructions that GSK could collect for review any imaging performed within the scope of this trial and not only images that are related to the identification of recurrences were included; 4) Clarification that at the concluding examination following a recurrence, any tumor assessment performed at the visit showing recurrence did not have to be repeated; 5) Some corrections were made, i.e. footnote cross references, clinical cut off for anti-MAGE-A3 antibodies enzyme-linked immunosorbent assay (ELISA), the power to detect a differential effect in the GS+ population for validation of the gene profile.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
01 April 2014	The study was terminated early on 1 April 2014 following assessment of the lack of efficacy of the MAGE-A3 ASCI study product by the IDMC for the study, as the first two co-primary objectives (DFS in the overall population and DFS in the No-CT population) were not reached. The third co-primary objective, i.e. DFS in the test set of the GS+ population, could not be assessed as no GS classifier could be identified in the training set. The final analysis presented in this summary was performed on all the data collected up to the data lock point (DLP) of 23 January 2014. No follow-up analysis was performed including additional data collected until the end of the study as these were very limited data. Safety data were recorded after the data lock point of the Final Analysis. These safety data are not reported in the safety section of this summary and are as follows for the period spreading from DLP to study end (23 September 2014): 1) For this entire period of assessment, SAEs were additionally reported by 7 and 3 patients in the MAGE-A3 and Placebo groups, respectively, none of these SAEs having a fatal outcome and one of them reported in the MAGE-A3 Group (MedDRA preferred term: mediastinitis) being assessed by the investigators as related to MAGE-A3 ASCI study product; and 2) during the 31-day periods following each treatment administration, at least one AE was reported by 38 and 15 patients in MAGE-A3 and Placebo groups, respectively. Overall these additional safety data did not alter the rates of AEs as displayed in this summary.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Objective C to demonstrate clinical efficacy in terms of DFS of the MAGE-A3 product versus placebo in NSCLC after complete surgical resection in the GS+ population could not be evaluated as no GS classifier could be identified in the training set.

Notes:
