

Clinical trial results:

A Combined Phase II/III, Observer-Blind, Randomized, Multi-center Study to Evaluate Safety, Tolerability and Immunogenicity of Trivalent Subunit Influenza Vaccines, Produced Either in Mammalian Cell Culture or in Embryonated Hen Eggs (Fluvirin®), in Healthy Children and Adolescents Aged 3-17 Years

Summary

EudraCT number	2007-001534-13
Trial protocol	HU LT FI IT
Global end of trial date	17 July 2008

Results information

Result version number	v2 (current)
This version publication date	28 July 2016
First version publication date	04 December 2014
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Required for the re-QC project because of the EudraCT system glitch and possible updates to results may be required. Moreover, a change in system user for this study is necessary.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 March 2009
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 July 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Co-Primary:

To demonstrate non-inferiority of the post-vaccination (Day 50) hemagglutination inhibition (HI) geometric mean titer (GMT) of the cell culture-derived influenza vaccine to the corresponding GMT of the egg-derived influenza vaccine for all three strains after two doses administered four weeks apart to a subset of children 3-8 years of age (Cohort 3, immunogenicity subset).

To demonstrate non-inferiority of the percentages of subjects achieving seroconversion or significant increase in antibody titer at Day 50 following administration of the cell culture-derived influenza vaccine to the corresponding percentages of subjects following administration of the egg-derived influenza vaccine for all three strains after two doses administered four weeks apart to a subset of children 3-8 years of age (Cohort 3, immunogenicity subset).

Protection of trial subjects:

Study vaccines were not administered to individuals with known hypersensitivity to any component of the vaccines.

An oral temperature $\geq 38.0^{\circ}\text{C}$ ($\geq 100.4^{\circ}\text{F}$) or serious active infection was a reason for delaying vaccination.

Standard immunization practices were observed and care was taken to administer the injection intramuscularly. As with all injectable vaccines, appropriate medical treatment and supervision was readily available in case of rare anaphylactic reactions following administration of the study vaccine. Epinephrine 1:1000 and diphenhydramine was available in case of any anaphylactic reactions. Care was taken to ensure that the vaccine is not injected into a blood vessel.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 October 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 632
Country: Number of subjects enrolled	Italy: 149
Country: Number of subjects enrolled	Lithuania: 248
Country: Number of subjects enrolled	Hungary: 575
Country: Number of subjects enrolled	Croatia: 109
Country: Number of subjects enrolled	Romania: 3

Country: Number of subjects enrolled	United States: 1888
Worldwide total number of subjects	3604
EEA total number of subjects	1716

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	3017
Adolescents (12-17 years)	587
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled from 14 sites in Finland, 16 in the US, 9 in Croatia, 5 in Italy, 6 in Lithuania, 2 in Romania, 8 in Hungary.

Pre-assignment

Screening details:

All subjects enrolled were included in the trial.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1+2 cTIV (9-17 years)

Arm description:

All subjects aged 9-17 years received one 0.5 mL IM injection, of Cell Culture-derived trivalent influenza vaccine.

Arm type	Experimental
Investigational medicinal product name	Cell culture-derived trivalent influenza vaccine
Investigational medicinal product code	
Other name	cTIV, Optaflu
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Vaccination consisted of one 0.5 mL dose for Cohorts 1 and 2 and two 0.5 mL doses administered four weeks apart for Cohort 3; all injections were administered IM in the deltoid muscle, preferably of the non-dominant arm.

Arm title	Cohort 1+2 eTIV (9-17 years)
------------------	------------------------------

Arm description:

All subjects aged 9-17 years received one 0.5 mL injection, of egg -derived trivalent influenza vaccine.

Arm type	Active comparator
Investigational medicinal product name	Egg-derived trivalent influenza vaccine
Investigational medicinal product code	
Other name	eTIV, Fluvirin
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Vaccination consisted of one 0.5 mL dose for Cohorts 1 and 2 and two 0.5 mL doses administered four weeks apart for Cohort 3; all injections were administered IM in the deltoid muscle, preferably of the non-dominant arm.

Arm title	Cohort 3 cTIV (3-8 years)
------------------	---------------------------

Arm description:

All subjects aged 3-8 years received two 0.5 mL injections, administered four weeks apart, of Cell Culture-derived trivalent influenza vaccine.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Cell culture-derived trivalent influenza vaccine

Primary: 1) Non-inferiority of the Cell Culture-derived Vaccine to the Egg-derived Vaccine in 3-8 Years Old Children in Post Vaccination Geometric Mean Titers

End point title	1) Non-inferiority of the Cell Culture-derived Vaccine to the Egg-derived Vaccine in 3-8 Years Old Children in Post Vaccination Geometric Mean Titers ^[1]
End point description: To demonstrate non-inferiority of the post vaccination hemagglutination inhibition (HI) geometric mean titer (GMT) of the cell culture-derived influenza (cTIV) vaccine to the corresponding GMT of the egg-derived (eTIV_f) influenza vaccine, for all three strains, after two injections administered four weeks apart to a subset of children 3-8 years of age. GMTs were evaluated using two assays, HI egg derived antigen assay and HI cell derived antigen assay. The analysis was performed on the per-protocol dataset	
End point type	Primary
End point timeframe: Day 50 post vaccination	

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: There were no statistical analysis done to this endpoint.

Number of subjects included in analysis	1037
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[14]
Method	Binominal or Miettinen & Nurminen method
Parameter estimate	Difference in % (cTIV minus eTIV)
Point estimate	0
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6
upper limit	6

Notes:

[14] - cTIV was considered non-inferior to eTIV_f in terms of the percentages of subjects achieving seroconversion or significant increase in antibody titer at day 50 if for all three strains, the lower limit of the two-sided 95% CI around the differences in the percentages of subjects achieving seroconversion and significant increase (cTIV minus eTIV) was >-10%.

Secondary: 3) Geometric Mean Titers After 1 Dose of the Cell Culture-derived or the Egg- derived Influenza Vaccine in 9-17 Years Old Children and Adolescents

End point title	3) Geometric Mean Titers After 1 Dose of the Cell Culture-derived or the Egg- derived Influenza Vaccine in 9-17 Years Old Children and Adolescents
-----------------	--

End point description:

To evaluate immunogenicity in terms of Geometric Mean Titers (GMTs) in children 9-17 years of age after one injection of either cTIV vaccine or eTIV_f.
GMTs were evaluated using two assays, HI egg derived antigen assay and HI cell derived antigen assay. The analysis was performed on the per-protocol dataset.

Notes:

[20] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: There were no statistical analysis done to this endpoint.

End point values	Cohort 3 cTIV (3-8 years)	Cohort 3 eTIV (3-8 Years)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	1599	1013		
Units: Participants				
number (not applicable)				
Injection site pain	653	398		
Injection site erythema	337	206		
Injection site induration	141	84		
Injection site ecchymosis	144	99		
Injection site swelling	119	85		
Chills	70	68		
Malaise	156	117		
Myalgia	202	119		
Arthralgia	65	28		
Headache	182	144		
Sweating	47	28		
Fatigue	210	170		
Fever ($\geq 38^{\circ}\text{C}$)	75	60		
Oral temp; 38 to $<38.9^{\circ}\text{C}$ (N=1598,1013)	48	43		
Oral temp; 39 to $< 40^{\circ}\text{C}$ (N=1598,1013)	16	15		
Oral temp; $\geq 40^{\circ}\text{C}$ (N=1598,1013)	6	1		
Stayed at home (N=1586, 1004))	77	63		
Analgesic Medication Used	221	148		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Throughout the study period (Day 1-181 for Cohorts 1 and 2, and Day 1-209 for cohort 3)

Adverse event reporting additional description:

Solicited AEs - day 1 through day 7 after vaccination.

All AEs- day 1 through day 29 (cohort 1&2); day 1 through day 50 (cohort 3).

SAEs, onset of chronic illness, and AEs that lead to withdrawal from the study and associated concomitant medications-day 29 to day 181 (cohort 1&2); day 50 through day 209 (cohort 3)

Assessment type	Systematic

Reporting groups

Reporting group title	Cohort 1 & 2 cTIV (9-17 years)
-----------------------	--------------------------------

Reporting group description:

All subjects aged 9-17 years received one 0.5 mL IM injection, of Cell Culture-derived trivalent influenza vaccine.

Reporting group title	Cohort 1 & 2 eTIV (9-17 years)
-----------------------	--------------------------------

Reporting group description:

All subjects aged 9-17 years received one 0.5 mL injection, of egg -derived trivalent influenza vaccine.

Reporting group title	Cohort 3 cTIV(3-8 years)-First vaccination
-----------------------	--

Reporting group description:

All subjects aged 3-8 years received two 0.5 mL injections, administered four weeks apart, of Cell Culture-derived trivalent influenza vaccine.

Reporting group title	Cohort 3 eTIV(3-8 years)-First vaccination
-----------------------	--

Reporting group description:

All subjects aged 3-8 years received two 0.5 mL injections, administered four weeks apart of egg - derived trivalent influenza vaccine.

Reporting group title	Cohort 3 cTIV(3-8 years)-Second vaccination
-----------------------	---

Reporting group description:

All subjects aged 3-8 years received two 0.5 mL injections, administered four weeks apart, of Cell Culture-derived trivalent influenza vaccine.

Reporting group title	Cohort 3 eTIV(3-8 years)-Second vaccination
-----------------------	---

Reporting group description:

All subjects aged 3-8 years received two 0.5 mL injections, administered four weeks apart of egg - derived trivalent influenza vaccine.

Total subjects affected by non-serious adverse events subjects affected / exposed	507 / 1013 (50.05%)	670 / 1557 (43.03%)	413 / 977 (42.27%)
Nervous system disorders Headache subjects affected / exposed occurrences (all)	111 / 1013 (10.96%) 135	94 / 1557 (6.04%) 110	73 / 977 (7.47%) 89
General disorders and administration site conditions			

Fatigue subjects affected / exposed occurrences (all)	119 / 1013 (11.75%) 143	99 / 1557 (6.36%) 110	82 / 977 (8.39%) 92
Injection site erythema subjects affected / exposed occurrences (all)	138 / 1013 (13.62%) 139	209 / 1557 (13.42%) 211	118 / 977 (12.08%) 121
Injection site haemorrhage subjects affected / exposed occurrences (all)	60 / 1013 (5.92%) 67	52 / 1557 (3.34%) 58	43 / 977 (4.40%) 51
Injection site induration subjects affected / exposed occurrences (all)	44 / 1013 (4.34%) 45	66 / 1557 (4.24%) 66	51 / 977 (5.22%) 51
Injection site pain subjects affected / exposed occurrences (all)	251 / 1013 (24.78%) 261	421 / 1557 (27.04%) 430	266 / 977 (27.23%) 278
Malaise alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	78 / 1013 (7.70%) 85	76 / 1557 (4.88%) 86	50 / 977 (5.12%) 56
Pyrexia subjects affected / exposed occurrences (all)	73 / 1013 (7.21%) 84	63 / 1557 (4.05%) 70	44 / 977 (4.50%) 49
Respiratory, thoracic and mediastinal disorders Cough alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	75 / 1013 (7.40%) 87	70 / 1557 (4.50%) 75	51 / 977 (5.22%) 52
Musculoskeletal and connective tissue disorders Myalgia subjects affected / exposed occurrences (all)	76 / 1013 (7.50%) 88	100 / 1557 (6.42%) 28	67 / 977 (6.86%) 22

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
