

Clinical trial results:

A multicenter, randomized, blinded study to assess safety and efficacy of Pasireotide LAR vs octreotide LAR in patients with active acromegaly

Due to EudraCT system limitations, which EMA is aware of, results of crossover studies and data using 999 as data points are not accurately represented in this record. Please go to <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results

Summary

EudraCT number	2007-001972-36

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 March 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 March 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Compare proportion of patients with reduction of GH to <2.5 µg/L and normalization of IGF-1 (age and sex related) between the two treatment groups at 12 months.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 February 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 9
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	United States: 41
Country: Number of subjects enrolled	Colombia: 8
Country: Number of subjects enrolled	Russian Federation: 28
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Poland: 7
Country: Number of subjects enrolled	Korea, Republic of: 18

Country: Number of subjects enrolled	Italy: 26
Country: Number of subjects enrolled	Mexico: 22
Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	China: 35
Country: Number of subjects enrolled	Netherlands: 11
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Turkey: 8
Country: Number of subjects enrolled	Brazil: 40
Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	Switzerland: 2
Worldwide total number of subjects	358
EEA total number of subjects	101

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	335
From 65 to 84 years	22
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

151 patients (pts) planned per treatment group; study enrolled 358 pts. 176 & 182 were randomized to receive pasireotide & octreotide, respectively. From pasireotide group, 74 pts continued same treatment in extension & 38 crossed over to octreotide; from octreotide group 46 pts continued same treatment in extension & 81 crossed over to pasireotide

Period 1

Period 1 title	Core Phase - Full Analysis Set (FAS)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Pasireotide LAR

Arm description:

Patients in this arm received Pasireotide LAR 40 mg im depot injection, blinded, once every 28 days (\pm 2 days) for 12 months. Dose could be down- or up-titrated to 20 or 60 mg, respectively. Patients who responded to Pasireotide LAR (i.e. the randomized treatment) at the end of the core (Month 12), continued Pasireotide LAR treatment in the extension. Patients who did not respond to Pasireotide LAR at the end of the core (Month 12) were allowed to switch to receive Octreotide LAR in the extension.

Arm type	Experimental
Investigational medicinal product name	Pasireotide
Investigational medicinal product code	SOM230
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Pasireotide LAR - intramuscular (i.m.) depot injection given once every 28 days.

Arm title	Octreotide LAR
------------------	----------------

Arm description:

Patients in this arm received Octreotide LAR 20 mg im depot injection, blinded, once every 28 days (\pm 2 days) for 12 months. Dose could be down- or up-titrated to 10 or 30 mg, respectively. Patients who responded to Octreotide LAR (i.e. the randomized treatment) at the end of the core (Month 12) continued Octreotide LAR treatment in the extension (up to 2 years of treatment). Patients who did not respond to Octreotide LAR at the end of the core (Month 12) were allowed to switch to receive Pasireotide LAR in the extension.

Arm type	Experimental
Investigational medicinal product name	Octreotide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Octreotide LAR - i.m. depot injection given once every 28 days.

Number of subjects in period 1	Pasireotide LAR	Octreotide LAR
Started	176	182
Completed	141	156
Not completed	35	26
Abnormal laboratory value(s)	1	-
Adverse event, serious fatal	-	1
Consent withdrawn by subject	5	3
Adverse event, non-fatal	14	6
Administrative Problems	2	-
Lost to follow-up	1	-
Protocol deviation	7	8
Lack of efficacy	5	8

Period 2

Period 2 title	Extension - Same Treatment (FAS)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Pasireotide LAR

Arm description:

Patients in this arm received Pasireotide LAR 40 mg im depot injection, blinded, once every 28 days (\pm 2 days) for 12 months. Dose could be down- or up-titrated to 20 or 60 mg, respectively. Patients who responded to Pasireotide LAR (i.e. the randomized treatment) at the end of the core (Month 12), continued Pasireotide LAR treatment in the extension. Patients who did not respond to Pasireotide LAR at the end of the core (Month 12) were allowed to switch to receive Octreotide LAR in the extension.

Arm type	Experimental
Investigational medicinal product name	Pasireotide
Investigational medicinal product code	SOM230
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Pasireotide LAR - intramuscular (i.m.) depot injection given once every 28 days.

Arm title	Octreotide LAR
------------------	----------------

Arm description:

Patients in this arm received Octreotide LAR 20 mg im depot injection, blinded, once every 28 days (\pm 2 days) for 12 months. Dose could be down- or up-titrated to 10 or 30 mg, respectively. Patients who responded to Octreotide LAR (i.e. the randomized treatment) at the end of the core (Month 12) continued Octreotide LAR treatment in the extension (up to 2 years of treatment). Patients who did not respond to Octreotide LAR at the end of the core (Month 12) were allowed to switch to receive Pasireotide LAR in the extension.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Octreotide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Octreotide LAR - i.m. depot injection given once every 28 days.

Number of subjects in period 2^[1]	Pasireotide LAR	Octreotide LAR
Started	74	46
Completed	28	35
Not completed	46	11
Adverse event, serious fatal	1	1
Consent withdrawn by subject	16	2
Adverse event, non-fatal	4	1
Abnormal Lab Value (s)	4	-
Condition no longer requires study drug	6	-
Administrative Problems	9	3
Lost to follow-up	3	1
Lack of efficacy	3	3

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Completed = anyone who did not discontinue prior to month 12.. It does not mean completed the study.

Period 3

Period 3 title	Extension - after crossover (CAS)
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	No
Arm title	Pasireotide LAR

Arm description:

Patients in this arm received Pasireotide LAR 40 mg im depot injection, blinded, once every 28 days (\pm 2 days) for 12 months. Dose could be down- or up-titrated to 20 or 60 mg, respectively. Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse Events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

Reporting groups

Reporting group title	Pasireotide LAR - up to 26 Months
-----------------------	-----------------------------------

Reporting group description:

Includes data from both blinded core and extension phase (up to Month 26 cutoff date of 29-Dec-2011) for patients who continued the same treatment (Pasireotide LAR) as in the core. For patients who switched from blinded Pasireotide LAR to Octreotide LAR treatment, only data collected before crossover is included.

Reporting group title	Octreotide LAR - up to 26 Months
-----------------------	----------------------------------

Reporting group description:

Includes data from both blinded core and extension phase (up to Month 26 cutoff date of 29-Dec-2011) for patients who continued the same treatment (Octreotide LAR) as in the core. For patients who switched from blinded Octreotide LAR to Pasireotide LAR treatment, only data collected before crossover is included.

Reporting group title	Crossed over to Pasireotide LAR - up to 26 Months
-----------------------	---

Reporting group description:

Includes all data in the extension phase (up to 26-Month cutoff date of 29-Dec-2011) collected after the crossover time point for patients who crossed over from Octreotide LAR in the core to Pasireotide LAR treatment in the extension phase.

Reporting group title	Crossed over to Octreotide LAR - up to 26 Months
-----------------------	--

Reporting group description:

Includes all data in the extension phase (up to 26-Month cutoff date of 29-Dec-2011) collected after the crossover time point for patients who crossed over from Pasireotide LAR in the core to Octreotide LAR treatment in the extension phase.

Reporting group title	Pasireotide LAR - up to EOS
-----------------------	-----------------------------

Reporting group description:

Includes data from both core and extension phase (up to End-of-study date of 11-Mar-2016) for patients who continued the same treatment (Pasireotide LAR) as in the core. For patients who switched from blinded Pasireotide LAR to Octreotide LAR treatment, only data collected before crossover is included. Per protocol, patients on Pasireotide LAR could continue to receive open-label Pasireotide LAR after treatment unblinding at Month 26, whereas those on Octreotide LAR were not followed after Month 26.

Reporting group title	Crossed over to Pasireotide LAR - up to EOS
-----------------------	---

Reporting group description:

Includes all data in the extension phase (up to End-of-study date of 11-Mar-2016) collected after the crossover time point for patients who crossed over from Octreotide LAR in the core to Pasireotide LAR treatment in the extension phase.

Per protocol, patients on Pasireotide LAR could continue to receive open-label Pasireotide LAR after treatment unblinding at Month 26, whereas those on Octreotide LAR were not followed after Month 26.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 February 2008	<p>The main reason for this protocol amendment was to change the duration of the study. Although six months is an adequate time point to establish steady state pharmacokinetics, it was not adequate to establish long-term efficacy in both treatment groups (Pasireotide LAR and Octreotide LAR). Therefore, the study was extended to twelve months to provide sufficient time to assess the clinical response of patients to the study drugs.</p> <p>Additional secondary efficacy objectives were added in order to further assess the efficacy of pasireotide LAR.</p>
21 May 2008	<p>Decreased levels of Vitamin B12 were been observed as a rare adverse event in patients treated with Octreotide . Therefore, blood levels of Vitamin B12 was be tested at baseline (visit 2) and every 3 months during the core and the extension phases of the study.</p> <p>The use of Gadolinium as a type of contrast material during the MRI procedure performed during the core and the extension phases of the study was explicitly mentioned in the protocol.</p>
25 September 2008	<p>As requested by the Chinese Health Authorities, patients enrolled into the study in China had to have a normal serum creatinine level for inclusion.</p>
23 April 2009	<p>Extended blinding to patient's treatment from month 12 to month 26. In order to have a benchmark for the evaluation of the long-term safety and efficacy of pasireotide, patients randomized to octreotide, who responded to treatment at month 12 were offered to enter a 14 months extension period with the same medication. Patients not responding to either pasireotide or octreotide at month 12 were offered to be switched to the other study medication in order to explore the safety and efficacy of switching from pasireotide to octreotide and from octreotide to pasireotide. Patients who crossed over to the other treatment arm at month 13 followed the same schedule of evaluations as patients continuing in the extension phase in the same arm. A new secondary objective was added, which was, duration of response for patients considered responders at month 12 in order to evaluate the duration of the efficacy of the study medications. In line with the published guidelines established by experts' associations for management of diabetes, changes were made in the criteria for monitoring hyperglycemia reflecting standard of care. Clarifications to the schedule of dose increase were made. Serum cortisol is a key safety measure and was added to the list of the tests to be performed at the Central Lab. Modifications to the inclusion and exclusion criteria were made to clarify the eligibility of patients who may have received a single dose of short-acting octreotide or short-acting dopamine agonists prior to study entry. In order to fully utilize the response data in patients who discontinued early, a Last Observation Carried Forward (LOCF) approach was introduced and was applied for the primary analysis.</p>
03 May 2010	<p>Recent results from the thorough QT/QTc (TQT) study provided data on the QT/QTc intervals of a supra-therapeutic dose of pasireotide in healthy volunteers. As a consequence of the ECG study results, study discontinuation criteria were modified and additional ECG and pharmacokinetic monitoring was implemented for the ongoing SOM230 clinical trials to further strengthen the safety of patients. This amendment also clarified wording across the protocol for the sake of the consistency as well as added clarification for the applicable procedures for patients who entered the extension prior and after Amendment 4 implementation. Additionally, further recommendations regarding serum cortisol samples collection were provided as well as clarification on first study drug dose administration window. Furthermore, a section including secondary objectives for the analysis of the blinded extension phase was added and clarification was made in the statistical analysis section in order to further explain analysis of the data collected in the extension phase of the study.</p>

26 July 2011	The purpose of this amendment was to clarify the statistical analysis of the secondary objectives in the extension phase and the statistical analysis of the pharmacokinetics and pharmacodynamics assessments. The amendment did not change any study objectives. The extension phase was divided into two data subsets: data before cross-over and data after crossover. After the first analysis performed with 12 months data, an additional data cut-off for analysis for the purpose of submission was added to include the extension data collected up to the Month 19 (Visit 8E) assessment in addition to the data cut-off at month 27. A second Per Protocol (PP) analysis set was defined for that purpose. As a consequence of the additional data cut-off, Global Novartis team Clinical Trial Team (CTT) were unblinded after database lock, which occurred approximately 4 months prior to last patient last visit (LPLV) of the first year of the extension phase. The cut-off date for this database lock was performed when the last patient completed the Month 19 (Visit 8E) assessment (09-June-2011). There was no impact on study conduct since all measures were in place to ensure that investigators and Local Novartis teams (CPOs) remain blinded as planned until the last patient completed the Month 26 (Visit 15E) assessment. The unblinding process at the clinical sites in preparation of Visit 15E (Month 26) was clarified. In addition, the schedule of assessments during the extension phase after Month 26 regarding GH suppression post OGTT profiles was modified. After this timepoint, this assessment was performed every 6 months instead of every 3 months as this high frequency was not necessary anymore for follow up assessments.
12 December 2011	The protocol was amended to include additional hepatic-related safety measures as a result of an internal hepatic medical review of pasireotide trials. During this internal medical review of liver related laboratory values, 3 healthy volunteers were identified with elevations in liver function tests. An assessment of liver enzyme categorical outliers was completed across the pasireotide s.c. development program (up to October 2011). The pasireotide Compassionate Use Program was also reviewed. A review of the unblinded data from the clinical program with the pasireotide long acting release (LAR) formulation did not reveal cases meeting the Hy's law criteria. As a consequence of these observations, enhanced hepatic-related safety measures were taken to ensure patient safety.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, results of crossover studies and data using 999 as data points are not accurately represented in this record. Please go to <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results

Notes:
