

Clinical trial results:

Trial SAKK 56/07 Dasatinib first-line treatment in gastrointestinal stromal tumors. A multicenter phase II trial.

Summary

EudraCT number	2007-002047-24
Trial protocol	FR DE
Global end of trial date	16 May 2018

Results information

Result version number	v1 (current)
This version publication date	28 September 2022
First version publication date	28 September 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 May 2018
Global end of trial reached?	Yes
Global end of trial date	16 May 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Efficacy of dasatinib treatment as assessed by fusion PET/CT-scan

Protection of trial subjects:

Protection of trial subjects was ensured by Safety Monitoring, i.e. assessment of adverse events, serious adverse events, adverse drug reactions, and the continuous assessment of laboratory values and vital signs.

Background therapy:

none

Evidence for comparator:

not applicable. This was a single arm study.

Actual start date of recruitment	17 January 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Switzerland: 18
Country: Number of subjects enrolled	Poland: 7
Country: Number of subjects enrolled	France: 19
Country: Number of subjects enrolled	Germany: 1
Worldwide total number of subjects	45
EEA total number of subjects	27

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

47 of planned 52 patients at ten sites in France (3 sites, 21 patients), Germany (1 site, 1 patient), Poland (1 site, 7 patients) and Switzerland (8 sites, 18 patients) have been enrolled from January 2008 to November 2011.

Pre-assignment

Screening details:

Eligibility criteria of a patient were checked by the investigator. Once a patient fulfills all inclusion criteria and not any of the exclusion criteria, he/she was enrolled.

Pre-assignment period milestones

Number of subjects started	47 ^[1]
Number of subjects completed	45

Pre-assignment subject non-completion reasons

Reason: Number of subjects	No baseline CT (violation eligibility criteria): 1
Reason: Number of subjects	PET negative (violation eligibility criteria): 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: In total, 47 patients were screened for eligibility. Of these patients, five were deemed ineligible. However, for three of these patients failure of eligibility was noticed as late as after receipt of first study treatment. Thus, these three patients were included in the safety analysis set but rejected from the efficacy analysis set.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Dasatinib treatment
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Dasatinib
Investigational medicinal product code	
Other name	Sprycel®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

70 mg twice daily

Number of subjects in period 1	Dasatinib treatment
Started	45
Completed	45

Period 2

Period 2 title	Treatment/FU Phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Dasatinib treatment
-----------	---------------------

Arm description:

Dasatinib 70 mg BID per os for two years (26 cycles) or until progression or unacceptable toxicity. Elective surgery was allowed after at least six completed cycles in responding and stabilized patients. At time of progression, the patient was transferred to the follow-up phase and was proposed the standard treatment for GIST (i.e. imatinib 400 mg /day per os). Patients were followed up for up to five years after study treatment discontinuation or completing study treatment, respectively.

Arm type	Experimental
Investigational medicinal product name	Dasatinib
Investigational medicinal product code	
Other name	Sprycel®
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

70 mg twice daily

Number of subjects in period 2	Dasatinib treatment
Started	45
Completed	5
Not completed	40
Physician decision	3
Death	2
Degradation of clinical status	1
Disease progression (confirmed by PET)	14
Late screening failure (PET negative)	1
Unacceptable toxicity	7
Surgery	8

Late screening failure (No GIST)	2
Progressive disease by CT	2

Primary: Primary Endpoint | PET response at 4 weeks

End point title	Primary Endpoint PET response at 4 weeks ^[1]
End point description: Efficacy of dasatinib treatment as assessed by fusion PET/CT-scan. EORTC PET Study Group criteria were assessed by a central review board. [mCR: metabolic complete response, mPR: metabolic partial response, mSD: metabolic stable disease, mPD: metabolic progressive disease). Response defined as mCR+ mPR. Response rate presented with the corresponding 95% Clopper Pearson confidence interval. [mCR: 33%, mPR: 40%, mSD: 14%, mPD: 7%; n/a: 5%]	
End point type	Primary
End point timeframe: 4 weeks	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This was a single arm study. No comparative statistical analyses were performed. However, with an exact two stage binomial test with N1=17, R1=9 and N= 42 a decision limit R=26 was calculated to decide if treatment was promising.

End point values	Full Analysis Set

[2] - 32 patients with mPR/mCR

Statistical analyses

No statistical analyses for this end point

Secondary: Secondary Endpoint | Time to progression

End point title	Secondary Endpoint Time to progression
-----------------	--

End point description:

Time to progression was calculated from registration until progression or death due to tumor.

Kaplan Meier analysis. At the time of the analysis 22 patients had experienced disease progression. Among the others one patient died due to GIST.

There were 23 events for the time to progression analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

From registration until progression or death due to tumor.

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	42			
Units: Time to progression (months)				
median (confidence interval 95%)	14.1 (9.4 to 35.3)

Secondary: Secondary Endpoint | Progression free survival (PFS)

End point title	Secondary Endpoint Progression free survival (PFS)
-----------------	--

End point description:

Time to progression was calculated from registration until progression or death.

Kaplan-Meier Analysis. At the time of the analysis 22 patients had experienced disease progression. A

among the others one patient died due to GIST.

There were 24 events for the progression free survival analysis.

End point type	Secondary
End point timeframe:	
From registration until progression or death.	

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	42			
Units: PFS (months)				
median (confidence interval 95%)	14.1 (9.4 to 35.5)			

Statistical analyses

No statistical analyses for this end point

Secondary: Secondary Endpoint | Time to treatment failure

End point title	Secondary Endpoint Time to treatment failure
End point description:	
Time to treatment failure will be calculated from registration until premature trial treatment termination due to any reason. After treatment completion, it is defined as time to progression, time to death if no progression, or change of anti-tumor treatment in absence of progression.	
Kaplan-Meier Analysis. At the time of the analysis 41 patients had treatment failure: 37 patients stopped before 26 cycles, and four patients completed 26 cycles and had disease progression later on. One patient completed 26 cycles and had no progression so far.	
End point type	Secondary
End point timeframe:	
From registration until end of treatment.	

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	42			
Units: Time to treatment failure (months)				
median (confidence interval 95%)	8.5 (5.3 to 11.1)			

Statistical analyses

No statistical analyses for this end point

Secondary: Secondary Endpoint | Overall survival

End point title	Secondary Endpoint Overall survival
-----------------	---------------------------------------

End point description:

Overall survival will be calculated from registration until death or last follow-up, up to 5 years.

Kaplan-Meier Analysis. Seventeen patients had died at the time of the analysis. Two deaths occurred during treatment. Fifteen deaths occurred in the follow up phase. The median follow up time based on the reverse Kaplan Meier method was 6.2 years the range in surviving patients 3.4 to 7.6 years.

NOTE: UPPER LIMIT OF 95% CI NOT REACHED. DUMMY DATA ("999") ENTERED DUE TO DATABASE RESTRICTIONS.

End point type	Secondary
----------------	-----------

End point timeframe:

From registration until death or last follow-up, up to 5 years.

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	42			
Units: Overall Survival (months)				
median (confidence interval 95%)	6.5 (5.6 to 999)			

Statistical analyses

No statistical analyses for this end point

Secondary: Secondary Endpoint | Best response of 2nd-line treatment with another TK-inhibitor

End point title	Secondary Endpoint Best response of 2nd-line treatment with another TK-inhibitor
-----------------	--

End point description:

37 patients had started a 2nd-line treatment but 15 of them had elective surgery or started 2nd-line treatment before progression under 1st-line treatment. Thus for the analysis of 2nd-line treatment 22 patients were remaining.

Best response according to RECIST.

End point type	Secondary
----------------	-----------

End point timeframe:

From second-line treatment with another TK-inhibitor until end of study.

End point values	Full Analysis Set			
Subject group type	Subject analysis set			
Number of subjects analysed	22 ^[3]			
Units: Number of patients				
CR	2			
PR	9			
SD	8			
PD	3			

Notes:

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From registration up to 30 days after last dose of trial treatment.

Adverse event reporting additional description:

SAEs were recorded from registration up to 30 days after last dose of trial treatment. After this period the following events were recorded: (i) fatalities and severe events possibly, probably or definitely related to late effects of therapy, (ii) disabling events, (iii) second primary cancer, (iv) congenital anomaly

deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Safety Analysis Set		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	45 / 45 (100.00%)		
Investigations			
Haemoglobin			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Aspartate aminotransferase			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	4		
Vascular disorders			
Hot flush			
subjects affected / exposed	4 / 45 (8.89%)		
occurrences (all)	5		
Nervous system disorders			
Taste disorder			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Dizziness			
subjects affected / exposed	6 / 45 (13.33%)		
occurrences (all)	8		
Peripheral sensory neuropathy			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Headache			
subjects affected / exposed	21 / 45 (46.67%)		
occurrences (all)	32		
General disorders and administration site conditions			
Fatigue			
subjects affected / exposed	35 / 45 (77.78%)		
occurrences (all)	59		
Pyrexia			
subjects affected / exposed	10 / 45 (22.22%)		
occurrences (all)	10		
Chills			
subjects affected / exposed	5 / 45 (11.11%)		
occurrences (all)	5		

Localised oedema subjects affected / exposed occurrences (all) Oedema peripheral subjects affected / exposed occurrences (all) Influenza like illness subjects affected / exposed occurrences (all)	Additional description: Edema: head and neck		
	9 / 45 (20.00%)		
	10		
	3 / 45 (6.67%)		
Gastrointestinal disorders Constipation subjects affected / exposed occurrences (all) Diarrhoea subjects affected / exposed occurrences (all) Nausea subjects affected / exposed occurrences (all) Vomiting subjects affected / exposed occurrences (all) Abdominal pain subjects affected / exposed occurrences (all)	3		
	7 / 45 (15.56%)		
	12		
	29 / 45 (64.44%)		
	60		
	19 / 45 (42.22%)		
	31		
	11 / 45 (24.44%)		
	16		
	19 / 45 (42.22%)		
	25		
Respiratory, thoracic and mediastinal disorders Laryngeal pain subjects affected / exposed occurrences (all) Cough subjects affected / exposed occurrences (all) Dyspnoea subjects affected / exposed occurrences (all) Pleural effusion			
	Additional description: Throat/pharynx/larynx pain		
	3 / 45 (6.67%)		
	3		
	11 / 45 (24.44%)		
	16		
	22 / 45 (48.89%)		
	37		

subjects affected / exposed	21 / 45 (46.67%)		
occurrences (all)	44		
Dysphonia			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	4		
Skin and subcutaneous tissue disorders			
Acne			
subjects affected / exposed	5 / 45 (11.11%)		
occurrences (all)	6		
Alopecia			
subjects affected / exposed	4 / 45 (8.89%)		
occurrences (all)	4		
Dry skin			
subjects affected / exposed	6 / 45 (13.33%)		
occurrences (all)	8		
Pruritus			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Rash			
subjects affected / exposed	15 / 45 (33.33%)		
occurrences (all)	19		
Psychiatric disorders			
Insomnia			
subjects affected / exposed	4 / 45 (8.89%)		
occurrences (all)	4		
Renal and urinary disorders			
Pollakiuria			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	4		
Musculoskeletal and connective tissue disorders			
Musculoskeletal chest pain			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Arthralgia			
subjects affected / exposed	6 / 45 (13.33%)		
occurrences (all)	7		

Myalgia subjects affected / exposed occurrences (all)	11 / 45 (24.44%) 16		
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	14 / 45 (31.11%) 17		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This study was terminated by the sponsor due to low accrual after about 90% of patients had been enrolled.
