

Clinical trial results: HD18 for advanced stages in Hodgkins Lymphoma Summary

EudraCT number	2007-003187-22
Trial protocol	DE AT CZ NL
Global end of trial date	18 July 2019

Results information

Result version number	v1 (current)
This version publication date	24 July 2020
First version publication date	24 July 2020

Trial information

Trial identification

Sponsor protocol code	Uni-Koeln-908
-----------------------	---------------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00515554
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 February 2020
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	18 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The aim of the HD18 trial was to individualize treatment of patients with advanced-stage Hodgkin lymphoma (HL) by adapting it to early response.

The HD18 trial comprises of two independent studies for patients with a positive or negative PET after 2 cycles of eBEACOPP (PET-2), respectively.

The primary objective of the study in patients with positive PET-2 was to show superiority of the combined immuno-chemotherapy R-eBEACOPP compared with standard eBEACOPP in terms of progression-free survival (PFS).

The primary objective of the study in patients with negative PET-2 was to show non-inferiority of treatment with a reduced number of cycles compared with standard treatment in terms of PFS.

Protection of trial subjects:

Written informed consent before study entry, frequent DMC monitoring, hospitalization during first cycle and dexamethasone pre-treatment recommended for patients aged 40 years or older, mandatory prophylaxis during chemotherapy, dose reduction strategy in case of adverse events

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 May 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 37
Country: Number of subjects enrolled	Austria: 66
Country: Number of subjects enrolled	Czech Republic: 35
Country: Number of subjects enrolled	Germany: 1810
Country: Number of subjects enrolled	Switzerland: 153
Worldwide total number of subjects	2101
EEA total number of subjects	1948

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2101
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between 14 May 2008 and 18 July 2014, 2101 patients were enrolled in 301 trial sites in 5 European countries.

Pre-assignment

Screening details:

Enrolled patients received 2 cycles eBEACOPP followed by PET/CT-based response assessment. After central review of PET-2, patients were randomly assigned to a treatment group based on their PET-2 result. Patients dropping out before or during central PET review were not randomized.

Pre-assignment period milestones

Number of subjects started	2101
Number of subjects completed	1964

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Adverse event, non-fatal: 18
Reason: Number of subjects	Adverse event, serious fatal: 7
Reason: Number of subjects	Consent withdrawn by subject: 1
Reason: Number of subjects	Protocol deviation: 39
Reason: Number of subjects	Revision of HL diagnosis: 21
Reason: Number of subjects	Registration error: 1
Reason: Number of subjects	Violation of inclusion or exclusion criteria: 35
Reason: Number of subjects	Independent disease entity: 5
Reason: Number of subjects	Other: 9
Reason: Number of subjects	Progressive disease: 1

Period 1

Period 1 title	Randomization
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: 8x eBEACOPP PET+

Arm description:

Standard treatment for PET-2-positive patients pre amendment 2: 8x eBEACOPP in 21-day intervals; 30 Gy radiotherapy recommended for lesions of at least 2.5 cm in the largest diameter with residual ¹⁸F-FDG uptake after chemotherapy

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Bleomycin
Investigational medicinal product code	L01DC01
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use
Dosage and administration details:	
10 mg/m ² BSA on day 8 of each cycle	
Investigational medicinal product name	Etoposide
Investigational medicinal product code	L01CB01
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
200 mg/m ² BSA on days 1-3 of each cycle	
Investigational medicinal product name	Doxorubicine
Investigational medicinal product code	L01DB01
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
35 mg/m ² BSA on day 1 of each cycle	
Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	L01AA01
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use
Dosage and administration details:	
1250 mg/m ² BSA on day 1 of each cycle	
Investigational medicinal product name	Vincristine
Investigational medicinal product code	L01CA02
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use
Dosage and administration details:	
1.4 mg/m ² BSA on day 8 of each cycle	
Investigational medicinal product name	Procarbazine
Investigational medicinal product code	L01XB01
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use
Dosage and administration details:	
100 mg/m ² BSA on days 1-7 of each cycle	
Investigational medicinal product name	Prednisone
Investigational medicinal product code	H02AB07
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use
Dosage and administration details:	
40 mg/m ² BSA on days 1-14 of each cycle	
Arm title	Arm B: 8x R-eBEACOPP PET+

Arm description:

Experimental treatment for PET-2-positive patients pre amendment 2: 8x R-eBEACOPP in 21-day intervals; 30 Gy radiotherapy recommended for lesions of at least 2.5 cm in the largest diameter with residual ¹⁸F-FDG uptake after chemotherapy

Arm type	Experimental
Investigational medicinal product name	Bleomycin
Investigational medicinal product code	L01DC01
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

10 mg/m² BSA on day 8 of each cycle

Investigational medicinal product name	Etoposide
Investigational medicinal product code	L01CB01
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

200 mg/m² BSA on days 1-3 of each cycle

Investigational medicinal product name	Doxorubicine
Investigational medicinal product code	L01DB01
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

35 mg/m² BSA on day 1 of each cycle

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	L01AA01
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

1250 mg/m² BSA on day 1 of each cycle

Investigational medicinal product name	Vincristine
Investigational medicinal product code	L01CA02
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

1.4 mg/m² BSA on day 8 of each cycle

Investigational medicinal product name	Procarbazine
Investigational medicinal product code	L01XB01
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

100 mg/m² BSA on days 1-7 of each cycle

Investigational medicinal product name	Prednisone
Investigational medicinal product code	H02AB07
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use

Dosage and administration details:	
40 mg/m ² BSA on days 1-14 of each cycle	
Investigational medicinal product name	Rituximab
Investigational medicinal product code	L01XC02
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravascular use
Dosage and administration details:	
375 mg/m ² BSA on days 0 and 3 of cycle 4; 375 mg/m ² BSA on day 1 of cycles 5-8	
Arm title	Arm A6: 6x eBEACOPP PET+
Arm description:	
Standard treatment for PET-2-positive patients post amendment 2: 6x eBEACOPP in 21-day intervals; 30 Gy radiotherapy recommended for lesions of at least 2.5 cm in the largest diameter with residual ¹⁸ F-FDG uptake after chemotherapy	
Arm type	Active comparator
Investigational medicinal product name	Bleomycin
Investigational medicinal product code	L01DC01
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Investigational medicinal product name	Prednisone
Investigational medicinal product code	H02AB07
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use
Dosage and administration details: 40 mg/m ² BSA on days 1-14 of each cycle	

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: In the HD18 trial, all patients received initial 2 cycles of chemotherapy and were then randomized into one of two parallel treatment arms according to their PET-result. The baseline period only includes those patients who received randomized treatment within the study and are included in the efficacy analyses. Patients who dropped out before randomization are not included.

Number of subjects in period 2^[2]	Arm A: 8x eBEACOPP PET+	Arm B: 8x R-eBEACOPP PET+	Arm A6: 6x eBEACOPP PET+

Not specified	1	1
Independent disease entity	-	-
Patients' wish	23	6
Lack of efficacy	-	-
Protocol deviation	6	3

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: In HD18, all patients received 2 cycles of chemotherapy and were then randomized into one of two parallel treatment arms according to their PET result. All randomized patients are included in period 1 ("Randomization"). However, there were a small number of patients randomized despite prior protocol violation. These did not receive randomized treatment and have not been included in the efficacy analyses. Thus, the baseline period only includes patients receiving randomized treatment.

Baseline characteristics

Primary: Progression-free survival

End point title	Progression-free survival
-----------------	---------------------------

End point description:

Progression-free survival was defined as the time from completion of staging until progression, relapse, or death from any cause. If none of these events had occurred, progression-free survival was censored at the date of last information on the disease status. Progression-free survival was analyzed according to Kaplan-Meier. Analyses are based on the final data status after end of study and results may thus slightly differ from published values. Median observation time for progression-free survival for the entire study was 64 months. 5-year estimates and the respective 95% CIs will be reported.

Statistical analyses

Statistical analysis title	PET-2-positive study, superiority test
----------------------------	--

Statistical analysis description:

The primary objective of the study in patients with positive PET-2 was to show superiority of 8x R-eBEACOPP over 8x eBEACOPP. The trial was designed to detect an improvement of at least 15% in 5-year progression-free survival with a power of 80% and a two-sided significance level of 5%. Only patients with a positive PET-2 randomized to arms A and B (i.e. before amendment 2) are analyzed. PET-2-positive patients treated according to arm A6 post amendment 2 were separately analyzed descriptively.

Comparison groups	Arm A: 8x eBEACOPP PET+ v Arm B: 8x R-eBEACOPP PET+
-------------------	---

Number of subjects included in analysis	434
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.4 ^[4]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.29
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.72
upper limit	2.32

Notes:

[3] - Superiority was tested using log-rank test on a 2-sided significance level of 5%.

[4] - Conclusion: The favourable outcome of patients treated with eBEACOPP could not be improved by adding rituximab after positive PET-2.

Statistical analysis title	PET-2-negative study, non-inferiority test
-----------------------------------	--

Statistical analysis description:

The primary objective of the study in patients with negative PET-2 was to show non-inferiority of 4x eBEACOPP over combined 8/6x eBEACOPP. We defined non-inferiority as an absolute difference of 6% in the 5-year progression-free survival estimates. The trial was designed to perform a per-protocol analysis (excluding severe protocol deviations) with a power of 80%.

Comparison groups	Arm C: 8/6x eBEACOPP PET- v Arm D: 4x eBEACOPP PET-
Number of subjects included in analysis	920
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[5]
Parameter estimate	Difference in 5-year estimates
Point estimate	1.9
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.8
upper limit	5.5

Notes:

[5] - Non-inferiority would be established if the lower limit of the 2-sided 95% CI for the difference in 5-year progression-free survival was above -6%.

As the 95% CI for the 5-year difference excluded the predefined non-inferiority margin of -6%, non-inferiority of the shorter regimen could be concluded.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs of CTCAE grades 3/4 were assessed on the therapy administration CRFs for the duration of chemotherapy. SAEs were additionally assessed on specific forms, from first dose until 28 days after last dose unless at least possibly related.

Adverse event reporting additional description:

Please note that SAEs may be reported twice, on the therapy administration CRF and again on the SAE form. Thus, the "non-serious" AEs and the SAEs might include duplicate events and do not add up to a total number of AEs.

Assessment type	Non-systematic

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Non-serious AEs were documented on the same CRF reporting treatment administration. This CRF is missing in a small number of patients. As we do not have any information on (non-serious) AEs in these patients, they have been excluded from the "exposed" cohort.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 October 2009	Implementation of additional PET for PET-2-negative patients with residual lesions after end of chemotherapy; introduction of obligatory prephase treatment with dexamethasone for patients older than 40 years and extended prophylaxis
22 September 2011	Implementation of the results of the preceding GHSG HD15 trial: Therapy in the standard arms A and C was changed from 8 to 6 cycles eBEACOPP. Randomization for patients with positive PET-2 was stopped because the required sample size for superiority test was reached and PET-2-positive patients were subsequently treated with standard of 6x eBEACOPP.
21 December 2012	Recruitment of 500 additional patients in order to reach sufficient power for the analysis of PET-2-negative patients; current information regarding adjuvant medication (Levofloxacin) was taken into account.
14 April 2014	Adaption of the reference level for the evaluation of PET for radiotherapy recommendation
11 September 2017	Enable the documentation of follow-up data of all patients until the global end of the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
19 October 2012	Originally planned recruitment completed on 19-Oct-2012. Reassessment of assumptions - another 500 patients required in order to analyze the study question for PET-2-negative patients with sufficient power. Recruitment paused until amendment was approved.	24 January 2013

Notes:

Limitations and caveats

None reported
