

Clinical trial results:

A Phase II, Observer-Blind, Parallel Groups, Single Center, Extension Study to Evaluate the Immunogenicity and Safety Following a Single Intramuscular Dose of Flud® or Vaxigrip® Influenza Vaccines in Healthy Children who Received Either One or the Other Vaccine in the Previous V70P2 Study.

Summary

EudraCT number	2007-003339-22
Trial protocol	FI
Global end of trial date	11 June 2008

Results information

Result version number	v2 (current)
This version publication date	28 July 2016
First version publication date	07 December 2014
Version creation reason	<ul style="list-style-type: none">• Correction of full data set Required for the re-QC project because of the EudraCT system glitch and possible updates to results may be required. Moreover, a change in system user for this study is necessary.

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000149-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 October 2008
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 June 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To evaluate the immunogenicity of a single 0.25mL or 0.5mL IM injection of Fludac or Vaxigrip influenza vaccines in healthy children aged up to 48 months.
- To evaluate the safety and tolerability of a single 0.25mL or 0.5mL IM injection of Fludac or Vaxigrip influenza vaccines in healthy children aged up to 48 months.

Protection of trial subjects:

Study vaccines were not administered to individuals with known hypersensitivity to any component of the vaccines. An oral temperature $\geq 38.0^{\circ}\text{C}$ ($\geq 100.4^{\circ}\text{F}$) or serious active infection was a reason for delaying vaccination. Standard immunization practices were observed and care was taken to administer the injection intramuscularly. As with all injectable vaccines, appropriate medical treatment and supervision was readily available in case of rare anaphylactic reactions following administration of the study vaccine. Epinephrine 1:1000 and diphenhydramine was available in case of any anaphylactic reactions. Care was taken to ensure that the vaccine is not injected into a blood vessel.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 November 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 89
Worldwide total number of subjects	89
EEA total number of subjects	89

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	13
Children (2-11 years)	76
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled in one centre in Finland.

Pre-assignment

Screening details:

All children enrolled were included in the trial

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	aTIV <36

Arm description:

Each subject has received half a dose of a TIV.

Arm type	Experimental
Investigational medicinal product name	Adjuvunated trivalent influenza virus vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose of 0.25mL of vaccine is administered by IM injection into deltoid muscle of non-dominant arm.

Arm title	TIV <36
------------------	---------

Arm description:

Each subject has received a half a dose of TIV.

Arm type	Active comparator
Investigational medicinal product name	Trivalent influenza vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Single dose of 0.25mL of vaccine is administered by IM injection into deltoid muscle of non-dominant arm.

Arm title	aTIV >36
------------------	----------

Arm description:

Each subject has received a full dose of aTIV.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Adjuvunated trivalent influenza virus vaccine

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited adverse events (AEs) were collected from Day 1 through 7; Serious AEs were collected from day 1 to day 181 after vaccination.

Adverse event reporting additional description:

Solicited adverse events were collected by systematic assessment; Unsolicited adverse events were collected by non-systematic assessment; analysis was performed as per the safety data set.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 October 2007	<ul style="list-style-type: none">• exclusion criteria have been amended• "Adherence to Treatment Allocation List" has been updated.• Flowchart for Serious Adverse Events reporting.• Outer label for both study vaccines was added and a typing error was amended.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
