

## Clinical trial results:

### A Randomized, Double-Blind Evaluation of the Antiviral Efficacy, Safety, and Tolerability of Tenofovir Disoproxil Fumarate Versus Placebo in Adolescents With Chronic Hepatitis B Infection

#### Summary

EudraCT number	2007-003704-35
Trial protocol	GB BE FR ES BG DE GR Outside EU/EEA
Global end of trial date	02 December 2015

#### Results information

Result version number	v1 (current)
This version publication date	17 June 2016
First version publication date	17 June 2016

#### Trial information

##### Trial identification

Sponsor protocol code	GS-US-174-0115
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00734162
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000533-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 December 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 December 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to compare the antiviral efficacy, safety, and tolerability of tenofovir disoproxil fumarate (TDF) 300 mg once daily versus placebo once daily in adolescents (aged 12 to 17 years) with chronic hepatitis B infection.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements.

This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 December 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 74
Country: Number of subjects enrolled	Romania: 14
Country: Number of subjects enrolled	Bulgaria: 7
Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	Turkey: 2
Worldwide total number of subjects	106
EEA total number of subjects	99

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	106
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at 3 sites in the United States, 8 sites in Poland, 3 sites in Romania, 2 sites in Bulgaria, 2 sites in France, 2 sites in Spain, and 1 site in Turkey. The first participant was screened on 03 December 2008. The last study visit occurred on 02 December 2015.

### Pre-assignment

Screening details:

149 participants were screened.

### Period 1

Period 1 title	Randomized Phase (Through Week 72)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	TDF 12-14 years

Arm description:

TDF in participants 12-14 years of age in the Randomized Phase, followed by TDF in the Open-Label Phase

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tenofovir disoproxil fumarate (TDF) 300 mg once daily

<b>Arm title</b>	Placebo 12-14 years
------------------	---------------------

Arm description:

TDF placebo in participants 12-14 years of age in the Randomized Phase, followed by TDF in the Open-Label Phase

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

TDF placebo once daily

<b>Arm title</b>	Placebo 15-17 years
------------------	---------------------

Arm description:

TDF placebo in participants 15-17 years of age in the Randomized Phase, followed by TDF in the Open-Label Phase

Arm type	Placebo
----------	---------

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: TDF placebo once daily	
<b>Arm title</b>	TDF 15-17 years

Arm description:

TDF in participants 15-17 years of age in the Randomized Phase, followed by TDF in the Open-Label Phase

Arm type	Experimental
Investigational medicinal product name	Tenofovir disoproxil fumarate
Investigational medicinal product code	
Other name	Viread®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

TDF 300 mg once daily

### Primary: Percentage of Participants With HBV DNA < 400 Copies/mL at Week 72

End point title	Percentage of Participants With HBV DNA < 400 Copies/mL at Week 72
End point description: The percentage of participants with HBV DNA < 400 copies/mL at Week 72 was summarized by treatment and age group (grouped by baseline age for analysis), using the missing = failure (M = F) analysis with the double-blind efficacy evaluation (DBEE) algorithm.  In the M = F analysis method, all missing data were considered as failure to meet the outcome measure	

threshold. This method was combined with the DBEE algorithm, which included all available data for the double-blind period, and any data for the open-label period were not included; data generated during treatment-free follow-up from subjects who achieved HBsAg loss and entered treatment-free follow-up during double-blind treatment period were included.

Full Analysis Set: participants who were randomized and received at least one dose of study drug.

End point type	Primary

## Statistical analyses

Statistical analysis title	Difference between treatment arms
Statistical analysis description:	
Analysis is the difference between treatment groups in the proportion of participants who met the outcome measure criterion, controlling for randomization age group.	
Comparison groups	TDF 12-14 years v TDF 15-17 years v Placebo 12-14 years v Placebo 15-17 years
Number of subjects included in analysis	106
Analysis specification	Pre-specified
Analysis type	other
P-value	< 0.001 <sup>[1]</sup>
Method	Cochran-Mantel-Haenszel

Notes:

[1] - A p-value of < 0.05 was considered statistically significant.

## Primary: Percentage of Participants With at Least a 6% Decrease From Baseline in Bone Mineral Density (BMD) of the Spine at Week 72

End point title	Percentage of Participants With at Least a 6% Decrease From Baseline in Bone Mineral Density (BMD) of the Spine at Week 72 <sup>[2]</sup>
-----------------	---

End point description:

Data were summarized by treatment and age group (grouped by baseline age for analysis).

In contrast with what was previously reported in the interim Week 72 CSR, 1 participant met the primary safety endpoint of at least a 6% decrease from baseline in spine BMD at Week 72, based on the final BMD data analysis. The apparent discrepancy was due to the correction factor applied to the subject-specific BMD calculations performed at the time of the Interim Week 72 clinical study report that could not take into account the actual Week 72 phantom data (ie, calibration test used in longitudinal clinical trials to monitor and adjust for shifts in the DXA scanner calibration over time), which were not provided by the site at that time. The correction factor applied to the final analysis has been properly based on all phantom data through the end of Week 72, as well as through the end of Week 192.

Safety Analysis Set: participants who received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline to Week 72

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical comparison was planned or performed.

## Secondary: Percentage of Participants With HBsAg Seroconversion at Weeks 48, 72, 96, 144, and 192

End point title	Percentage of Participants With HBsAg Seroconversion at Weeks 48, 72, 96, 144, and 192
-----------------	--

End point description:

HBsAg seroconversion was defined as change of detectable antibody to HBsAg from negative to positive. Data were summarized by treatment and age group (grouped by baseline age for analysis), using the M = F.

## Secondary: Change From Baseline in Z-score for Spine BMD at Week 48

End point title	Change From Baseline in Z-score for Spine BMD at Week 48
End point description:	
To assess any effect of treatment on growth, Z-scores were used to express the deviation from a reference population for lumbar spine BMD. A Z-score of 0 indicated that a subject was typical of the	

population for their age, ethnicity, and gender. A negative Z-score indicated that the subject's recorded value was lower than typical for their age, ethnicity, and gender. A positive Z-score indicates that the subject's recorded value was higher than typical for their age, ethnicity, and gender. Data were summarized by treatment and age group (grouped by baseline age for analysis).

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline through end of the Open-Label Phase (up to 4 years)

Adverse event reporting additional description:

Safety Analysis Set

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	18.1
--------------------	------

### Reporting groups

Reporting group title	Double-Blind TDF
-----------------------	------------------

Reporting group description:

Adverse events reported in this group occurred during the Randomized Phase (+7 days for participants who did not continue to the Open-Label Phase) and includes all participants who received double-blind TDF during the Randomized Phase of the study.

Reporting group title	Double-Blind Placebo
-----------------------	----------------------

Reporting group description:

Adverse events reported in this group occurred during the Randomized Phase (+7 days for participants who did not continue to the Open-Label Phase) and includes all participants who received placebo during the Randomized Phase of the study.

Reporting group title	Open-Label TDF-TDF
-----------------------	--------------------

Reporting group description:

Adverse events reported in this group occurred during the Open-Label Phase and includes all participants who received double-blind TDF during the Randomized Phase of the study and continued to the Open-Label Phase.

Reporting group title	Open-Label Placebo-TDF
-----------------------	------------------------

Reporting group description:

Adverse events reported in this group occurred during the Open-Label Phase and includes all participants who received placebo during the Randomized Phase of the study and continued to the Open-Label Phase.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 May 2008	<ul style="list-style-type: none"><li>• The requirement for daily multivitamin to contain 100% of RDA for vitamin D was changed to require 100% of country-specific RDA for vitamin D.</li><li>• The study phase (Phase 3) was added to the protocol.</li><li>• Given the pediatric age range of study participants, the absolute requirement for contraception was changed to apply to sexually-active males and females of reproductive potential.</li><li>• The drug dispensing schedule was corrected to reflect that subjects were provided with sufficient supplies for 4 to 8 weeks of dosing during Weeks 1 to 96. Thereafter, subjects were provided with sufficient supplies for 12 weeks of dosing.</li><li>• The definition of overdose was corrected to match the text for definition of overdose in the existing approved Gilead Drug Safety and Public Health Standard Operating Procedure (SOP), effective date 07 January 2008.</li></ul>
17 February 2009	<ul style="list-style-type: none"><li>• The primary endpoint was changed from a composite of HBV DNA &lt; 400 copies/mL and ALT normal at Week 72 to the single endpoint of HBV DNA &lt; 400 copies/mL. This was done because the protocol permitted entry based upon historical ALT in the event that ALT was not &gt; 2 x the upper limit of normal at screening. Thus, some subjects may have been enrolled who had intermittent ALT elevations but a normal ALT at the time of baseline such that the composite endpoint would not be fully evaluable.</li><li>• The requirement for protocol-specified unblinding of treatment assignment in relation to persistent Grade 4 ALT was removed. Additionally, in the event where Grade 4 ALT was maintained for 16 weeks and in the case of ALT flare, both considered situations of medical need, serial HBV DNA values from Screen through time of event were made available to the investigator. This protected the blind of the study but permitted the investigator to use HBV DNA to make a medical management decision regarding the subjects with Grade 4 ALT.</li><li>• The inclusion criteria were modified to permit up to 50% of subjects enrolled to be HBeAg-negative. It was originally felt there would be a paucity of such subjects due to the natural course of chronic HBV infection in children and adolescents (ie, most in the "immune tolerant" phase). However, initial screening indicated that approximately 50% of potential subjects have HBeAg-negative disease.</li></ul>
01 June 2012	<ul style="list-style-type: none"><li>• Analysis of the primary endpoint was planned to occur at Week 72. Additional efficacy and safety analyses to be conducted after Week 72 were considered secondary.</li><li>• A Treatment Extension period was added instead of a separate rollover study. Subjects who were 17 years of age or younger at the last visit (Week 192) were offered the opportunity to continue in an extension of the study, where they would receive open-label TDF 300 mg until they reached 18 years of age or until standard of care therapy was initiated.</li><li>• Safety contact information was updated and reporting procedures were updated to include the process for special situations.</li><li>• The DXA window was increased to <math>\pm 15</math> days for visits occurring after Week 72. Visit window through Week 72 remained unchanged at <math>\pm 1</math> week (7 days).</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

There were no limitations affecting the analysis or results.

Notes:

---
