

## Clinical trial results:

**Randomized, active-controlled, double-blind, parallel design study to evaluate the efficacy and safety of a once-a-week prophylaxis treatment with BAY79-4980 compared to three times-per-week prophylaxis with rFVIII-FS in previously treated patients with severe hemophilia A**

### Summary

EudraCT number	2007-003718-32
Trial protocol	DE FR NL DK ES BE AT GB IT NO
Global end of trial date	05 October 2010

### Results information

Result version number	v2 (current)
This version publication date	24 July 2016
First version publication date	03 May 2015
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> Review of results set after re-introduction of EudraCT

### Trial information

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 October 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 October 2010
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to evaluate the effect of a once-a-week prophylaxis regimen with BAY79-4980 on the protection from total bleeds compared to a three times-per-week prophylaxis regimen with recombinant factor VIII formulated with sucrose (rFVIII-FS).

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and the International Conference on Harmonization guideline E6: Good Clinical Practice. An independent Data and Safety Monitoring Board (DSMB) supervised the subjects' safety and performed the pre-specified interim analyses according to the protocol. Before entering the study, the informed consent form was read by and explained to all subjects and/or their legally authorized representative. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug. A Data and Safety Monitoring Board supervised the safety of study subjects.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 June 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Italy: 20
Country: Number of subjects enrolled	Netherlands: 4
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Poland: 28
Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Denmark: 6
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Croatia: 3
Country: Number of subjects enrolled	Israel: 18
Country: Number of subjects enrolled	Germany: 8

Country: Number of subjects enrolled	United States: 36
Country: Number of subjects enrolled	Belgium: 2
Worldwide total number of subjects	143
EEA total number of subjects	86

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	5
Adults (18-64 years)	138
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Previously treated subjects with severe hemophilia A [less than (<) 1 percent (%) Factor VIII (FVIII)], who were currently on on-demand or secondary prophylaxis treatment with any FVIII for greater than or equal to (>=)150 exposure days with documented bleeds/injections during the last 6 months prior to study entry could participate in the study.

### Pre-assignment

Screening details:

Of 168 enrolled subjects, 25 failed screening.

### Period 1

Period 1 title	Double blind (DB)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	rFVIII-FS/Pegylated Liposomes (BAY79-4980)

Arm description:

35 international units per kilogram (IU/kg) body weight of BAY79-4980 1x/week plus 2 dummy injections/week [dummy = rFVIII-FS excipient reconstituted in sterile water for injection (WFI)].

Arm type	Experimental
Investigational medicinal product name	rFVIII-FS/Pegylated Liposomes
Investigational medicinal product code	BAY79-4980
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

35 IU/kg body weight of BAY79-4980 1x/week.

Investigational medicinal product name	Placebo injection: placebo/WFI
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Two placebo injections/week (dummy injections for blinding purposes) containing excipient of rFVIII-FS (packed with WFI solvent for reconstitution).

<b>Arm title</b>	rFVIII-FS/WFI (BAY14-2222)
------------------	----------------------------

Arm description:

25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection].

Arm type	Active comparator
Investigational medicinal product name	rFVIII-FS/WFI
Investigational medicinal product code	BAY14-2222
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

**Dosage and administration details:**

25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection].

<b>Number of subjects in period 1</b>	rFVIII-FS/Pegylated Liposomes (BAY79-4980)	rFVIII-FS/WFI (BAY14-2222)
Started	70	73
Participants received treatment	67	72
Completed	34	41
Not completed	36	32
Consent withdrawn by subject	8	2
Physician decision	-	1
Protocol violation	2	2
Termination of the double-blind period	22	21
Adverse event	1	3
Lost to follow-up	1	1
Lack of efficacy	2	2

**Period 2**

Period 2 title	Open label
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

**Arms**

Are arms mutually exclusive?	Yes
<b>Arm title</b>	rFVIII-FS/WFI (BAY14-2222): Follow up

**Arm description:**

Few subjects of each group after DB period terminated were entered in to the open label follow up period and received 25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection] for a period of 6 months or until completion of 12 months trial participation.

Arm type	Active comparator
Investigational medicinal product name	rFVIII-FS/WFI
Investigational medicinal product code	BAY14-2222
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

**Dosage and administration details:**

25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection].

<b>Arm title</b>	rFVIII-FS/Pegylated Liposomes (BAY79-4980): Extension period
Arm description: Ten subjects of each group entered open-label extension period after completion of DB study and received 35 IU/kg body weight of BAY79-4980 1x/week.	
Arm type	Experimental
Investigational medicinal product name	rFVIII-FS/Pegylated Liposomes
Investigational medicinal product code	BAY79-4980
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

**Dosage and administration details:**

35 IU/kg body weight of BAY79-4980 1x/week.

<b>Number of subjects in period 2<sup>[1]</sup></b>	rFVIII-FS/WFI (BAY14-2222): Follow up	rFVIII-FS/Pegylated Liposomes (BAY79-4980): Extension period
Started	26	20
Completed	18	20
Not completed	8	0
Consent withdrawn by subject	1	-
Subject convenience	1	-
Study termination	6	-

**Notes:**

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Subjects who completed double blind treatment, were offered continuation of open label treatment and due to the early termination of the double-blind study phase, subjects who had not completed double blind treatment were offered continuation in control arm (follow up phase). Hence, the number of subjects starting the period is not consistent with the number completing the preceding period.

**Period 3**

Period 3 title	Baseline period
Is this the baseline period?	Yes <sup>[2]</sup>
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

**Arms**

Are arms mutually exclusive?	No
------------------------------	----

<b>Arm title</b>	rFVIII-FS/Pegylated Liposomes (BAY79-4980)
Arm description: 35 IU/kg body weight of BAY79-4980 1x/week plus 2 dummy injections/week (dummy = rFVIII-FS excipient reconstituted in WFI). Subjects who received treatment were included in baseline period.	
Arm type	Experimental
Investigational medicinal product name	rFVIII-FS/Pegylated Liposomes
Investigational medicinal product code	BAY79-4980
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use
Dosage and administration details: 35 IU/kg body weight of BAY79-4980 1x/week plus 2 dummy injections/week (dummy = rFVIII-FS excipient reconstituted in WFI). Subjects who received treatment were included in baseline period.	
<b>Arm title</b>	rFVIII-FS/WFI (BAY14-2222)
Arm description: 25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection]. Subjects who received treatment were included in baseline period.	
Arm type	Active comparator
Investigational medicinal product name	rFVIII-FS/WFI
Investigational medicinal product code	BAY14-2222
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use
Dosage and administration details: 25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection].	

Notes:

[2] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: In overall trial, subjects who were randomized included and the baseline characteristics were provided for only subjects who were treated. Hence, the baseline period of treated subjects was created to publish the baseline characteristics data.

<b>Number of subjects in period 3</b>	rFVIII-FS/Pegylated Liposomes (BAY79-4980)	rFVIII-FS/WFI (BAY14-2222)
Started	67	72
Completed	67	72

## Baseline characteristics

### Reporting groups<sup>[1]</sup>

Reporting group title	rFVIII-FS/Pegylated Liposomes (BAY79-4980)
-----------------------	--

Reporting group description:

35 IU/kg body weight of BAY79-4980 1x/week plus 2 dummy injections/week (dummy = rFVIII-FS excipient reconstituted in WFI). Subjects who received treatment were included in baseline period.

Reporting group title	rFVIII-FS/WFI (BAY14-2222)
-----------------------	----------------------------

Reporting group description:

25 IU/kg body weight of rFVIII-FS 3x/week [employing 1% POPC-alone liposome (rFVIII-FS-POPC) as blinding agent used for first weekly injection and rFVIII-FS in WFI for 2nd and 3rd injection]. Subjects who received treatment were included in baseline period.

Notes:

[1] - The number of subjects reported to be in the baseline period is not equal to the worldwide number of subjects enrolled in the trial. It is expected that these numbers will be the same.

Justification: All enrolled subjects were not randomized and treated with study drugs. Hence, the worldwide number enrolled in the trial differs with the number of subjects reported in the baseline period.

Reporting group values	rFVIII-FS/Pegylated Liposomes (BAY79-4980)	rFVIII-FS/WFI (BAY14-2222)	Total
Number of subjects	67	72	139

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 February 2008	<ul style="list-style-type: none"><li>- The dosage for the treatment of bleeds and minor surgical interventions was limited to 1 single infusion with 35 IU/kg of BAY 79-4980 or rFVIII-POPC. The proposed treatment of bleeds and minor surgical interventions with extended dosages of BAY 79-4980 with up to 70 IU/kg/day was not accepted by a national authority.</li><li>- The definition of a target joint was added.</li><li>- The physical assessment of joints for the determination of the Gilbert Score was deleted at Month 6 and end of trial, as no change was expected during a 1-year observation period in subjects treated with prophylaxis.</li><li>- The screening period was prolonged to from 1-3 weeks to 3-5 weeks due to logistical requirements.</li><li>- Inhibitor development as reason for withdrawal was clarified.</li><li>- The exclusion criterion regarding active hepatic disease was clarified.</li></ul>
21 July 2009	<ul style="list-style-type: none"><li>- The interim safety analysis on lipid kinetics was to be performed in a subset of 20 subjects and the interim efficacy analysis was to be performed after 100 subjects had completed 6 months of treatment. This change was due to the slow recruitment into the study. In addition, the study was extended to new countries where prophylaxis is not the treatment standard in adult hemophilia subjects. Inclusion criterion number 4 was adapted accordingly to increase the percentage of subjects on on-demand treatment.</li><li>- The screening period was prolonged to 3-8 weeks due to logistic reasons.</li><li>- The upper dose limit was set to 4500 IU/infusion corresponding to a body weight of 131 kg, because extreme overweight is not related to a proportional increase in distribution volume.</li><li>- The endpoint related to change in joint status was deleted because no Gilbert score was determined at the end of the study.</li><li>- Specification that fasting after infusion of study medication was no longer required for the lipid PK, because this has no impact on the first sample after 6 hour. Lipid values for inclusion into the lipid pharmacokinetics (PK) were defined based on American Heart Association's Adult Treatment Panel (AHA-ATP) III recommendations.</li><li>- For the repeat FVIII PK at Week 26, specification that the study medication had to be administered with the same infusion rate as used during the first infusion (20-30 minutes).</li><li>- The original protocol specified that the efficacy analyses would be performed on the ITT population. A modification was made to specify that the primary efficacy analysis would be performed on the PP population and the secondary analysis on the ITT population since this is a more conservative approach for non-inferiority trials.</li></ul>
15 January 2010	<ul style="list-style-type: none"><li>- Based on the DSMB's interim efficacy check of the data of 108 subjects with a treatment period of 6 months, this amendment specified that recruitment had been halted on 22 December 2009 and would not be re-started. The double-blind treatment period was prematurely terminated and study participants were offered a participation in an open treatment arm (follow-up period). All subjects were offered a treatment with the comparator drug (rFVIII-FS-POPC/rFVIII-FS-WFI) and/or open-label rFVIII-FS-WFI for 6 months or until completion of the 12-month total study duration. Participation was according to the subjects' preference. This applied also to subjects who had not yet started the treatment phase. Blinding was to be preserved until clean data base of the blinded study.</li><li>- The DSMB concluded that the study would not be able to establish non-inferiority of BAY79-4980 compared to the control treatment with a non-inferiority margin of 15% and recommended to halt recruitment. The sponsor decided to discontinue the investigational treatment and to guarantee the treatment of subjects until study completion or at least 6 months in the comparator arm.</li></ul>

---

Notes:

---

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
22 December 2009	The recruitment and double-blind study phase were prematurely terminated after a scheduled interim analysis confirmed overt failure regarding the primary endpoint as judged by the independent DSMB.	-

Notes:

## Limitations and caveats

None reported
