Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 June 2009
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 June 2009
Global end of trial reached?	Yes
Global end of trial date	25 June 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The aim of this study is to compare the efficacy of ciclesonide with respect to reduction of the number of asthma exacerbations in children with mild persistent asthma. Treatment medication will be administered as follows: ciclesonide will be inhaled once daily, using one of the two dose levels versus placebo together with other corticosteroids used as intermittent treatment. The study duration consists of a baseline period (3 to 4 weeks) and a treatment period (12 months). The study will provide further data on safety and tolerability of ciclesonide.

Protection of trial subjects:

All study participants or their representative were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 January 2005
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Canada: 142
Country: Number of subjects enrolled	Hungary: 39
Country: Number of subjects enrolled	South Africa: 59
Worldwide total number of subjects	240
EEA total number of subjects	39

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	240
Adolescents (12-17 years)	0
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at 30 investigative sites in Canada, Hungary and South Africa from 24 January 2005 to 25 June 2009.

Pre-assignment

Screening details:

Children who experienced symptoms consistent with mild asthma for at least 12 months were enrolled in 1 of 3 treatment groups: once a day placebo, 100 µg or 200 µg ciclesonide.

Pre-assignment period milestones

Number of subjects started	240
Number of subjects completed	239

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Did not receive study drug.: 1
----------------------------	--------------------------------

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Ciclesonide 100 µg
------------------	--------------------

Arm description:

Ciclesonide 100 µg, metered-dose inhaler, two puffs once daily, in the evening, for up to 12 months.

Arm type	Experimental
Investigational medicinal product name	Ciclesonide 100 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, solution
Routes of administration	Inhalation use

Dosage and administration details:

50 µg two puffs once daily, in the evening via a metered-dose inhaler (50 µg ex-valve corresponds to 40 µg ex-actuator)

Arm title	Ciclesonide 200 µg
------------------	--------------------

Arm description:

Ciclesonide 200 µg, metered-dose inhaler, two puffs once daily, in the evening, for up to 12 months.

Arm type	Experimental
Investigational medicinal product name	Ciclesonide 200 µg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, solution
Routes of administration	Inhalation use

Dosage and administration details:

100 µg two puffs once daily, in the evening via a metered-dose inhaler (100 µg ex-valve corresponds to 80 µg ex-actuator)

Arm title	Placebo
Arm description: Ciclesonide placebo-matching, metered-dose inhaler, two puffs once daily, in the evening, for up to 12 months.	
Arm type	Placebo
Investigational medicinal product name	Placebo-matching ciclesonide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation vapour, solution
Routes of administration	Inhalation use

Dosage and administration details:

two puffs once daily, in the evening, via a metered-dose inhaler

Number of subjects in period 1^[1]	Ciclesonide 100 µg	Ciclesonide 200 µg	Placebo
Started	79	76	84
Completed	66	69	66
Not completed	13	7	18
Reasons Not Specified	13	7	18

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 240 patients were randomized but only 239 were treated.

Primary: Time to First Asthma Exacerbation

End point title	Time to First Asthma Exacerbation
End point description:	Time to first asthma exacerbation is defined as the time in days until the first asthma exacerbation, or to the end of treatment visit. In the absence of an exacerbation, an early treatment discontinuation is treated as a censored observation on the day following the last use of study drug. Intention to Treat (ITT) analysis set included all participants of the full analysis set who received at least one dose of study medication and had at least one post-baseline measurement of the primary efficacy outcome.
End point type	Primary

Primary: Exacerbations (Post-hoc Analysis of Annual Rates)

End point title	Exacerbations (Post-hoc Analysis of Annual Rates)
End point description:	
A model-based analysis of asthma exacerbation was performed to adjust to important covariables. The distribution of the data suggested a Poisson regression modeling (zero inflated) strategy. After a variable selection process considering also variable-by-treatment interactions, the variables centre, age [years] and race were identified to be important beside treatment. The parameters centre and age [years] were allocated to zero-model part and the variables treatment and race to the Poisson model part. The estimates of the per-treatment rates are based on a negative-binomial distribution. ITT analysis set included all participants of the full analysis set who received at least one dose of study medication and had at least one post-baseline measurement of the primary efficacy outcome.

Secondary: Total Asthma Symptom Score by Diary Entries

End point title	Total Asthma Symptom Score by Diary Entries
End point description:	
Total Asthma Score=daytime asthma score + night-time asthma score, where higher score indicates worsening of disease. Night-time asthma score is assessed on a 5 point scale where 0=No symptoms, slept through the night, 1=Slept well but some complaints in the morning, 2=Woke up once because of asthma (including early wakening), 3=Woke up several times because of asthma (including early wakening) and 4=Bad night, awake most of the night because of asthma. Day-time asthma score is assessed on a 5 point scale where 0=Very well, no symptoms, 1=one episode of wheezing, cough or breathlessness, 2=More than 1 episode of wheezing, cough or breathlessness without interfering with normal activities, 3=Wheezing, cough or shortness of breath most of the day which interfered to some extent with normal activities and 4=Asthma very bad. Unable to carry out daily activities as usual. ITT analysis. "n" in the category is the number of participants with data available at the given time-point.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 12 months

Adverse event reporting additional description:

At each visit investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by participant or observed by investigator was recorded, irrespective of relation to treatment. All adverse events and serious adverse events were coded according to MedDRA versions 8.0, 8.1, 9.0 and 9.1.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 September 2004	Amendment 1: • Addition of history of cataracts and/or glaucoma as an exclusion criterion due to the potential class effect of ocular disturbances with the long-term use of inhaled corticosteroid (ICS).
01 November 2004	Amendment 2: • Removal of the hyper-responsiveness test (challenge test) as a pre-randomisation requirement for study inclusion, • Dose for fluticasone propionate (FP) to be consistent with the marketed dosing of Flovent® and the standard in treatment (two puffs of 125 µg FP per day). • Inclusion of a guideline on inhalation technique for study medication that accommodated the full potential age range of participants enrolled in the trial. • Amendment of the paradigm for treatment of exacerbations to add a guideline on how to treat a participant who is getting better within 24 hours with regard to usage of FP. • Amendment of the study time table.
08 August 2005	Amendment 3: • Administrative change in personnel and contact information. • Changes referring to the use of intranasal medications for the treatment of rhinitis. • Exclusion criterion concerning use of topical steroids was originally implemented to limit any confounding variable. However, according to the literature available currently, no impact on growth or HPA axis has been demonstrated in many studies of topical nasal steroids.
10 March 2006	Amendment 4: Administrative changes to study personnel and contact information; submission to authorities; study protocol, documentation and archiving of data, and an increase in the number of study sites, reflecting the expansion of the trial to additional sites in countries other than Canada (Brazil and South Africa).
22 June 2007	Amendment 5: Administrative changes in the local sponsor and contact information reflecting a change in country of origin for study sites (from Canada, Brazil and South Africa to Canada, Hungary and South Africa). Change in study timelines.
17 January 2008	Amendment 6: Administrative changes to study timelines and local sponsor name and contact information.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
