Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 February 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 February 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The study was primarily designed to determine objective response, progression-free survival (PFS), and the safety and tolerability of R1507 in participants with recurrent or refractory Ewing's sarcoma, osteosarcoma, synovial sarcoma, rhabdomyosarcoma and other sarcomas including alveolar soft part sarcoma, desmoplastic small round cell tumor, extraskeletal myxoid chondrosarcoma, clear cell sarcoma, and myxoid liposarcoma.

Protection of trial subjects:

The study was conducted in full conformance with the principles of the Declaration of Helsinki, or the laws and regulations of the country in which the research was conducted, whichever afforded greater protection to the participant. The study has fully adhered to the principles outlined in the Guideline for Good Clinical Practice (GCP) International Conference on Harmonisation (ICH) Tripartite Guideline (January 1997) or with local law if it afforded greater protection to the participant. For study sites in the European Union (EU)/European Economic Area (EEA), the study has also complied with the EU Clinical Trial Directive (2001/20/EC). For study sites in the United States (US) or under the US Investigational New Drug application (IND), the study has also adhered to the basic principles of GCP as outlined in the current version of 21 Code of Federal Regulations (CFR), subchapter D, part 312, "Responsibilities of Sponsors and Investigators"; part 50, "Protection of Human Subjects"; and part 56, "Institutional Review Boards". In other countries where Guidelines for GCP exist, the Sponsor and the investigators have strictly ensured adherence to the stated provision.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 December 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 5
Country: Number of subjects enrolled	United States: 210
Country: Number of subjects enrolled	United Kingdom: 12
Country: Number of subjects enrolled	Australia: 11
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	France: 51
Country: Number of subjects enrolled	Germany: 15
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Netherlands: 3

Country: Number of subjects enrolled	Norway: 1
Country: Number of subjects enrolled	Spain: 4
Worldwide total number of subjects	317
EEA total number of subjects	93

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	6
Adolescents (12-17 years)	54
Adults (18-64 years)	243
From 65 to 84 years	13
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A screening period was included prior to administration of study drug. Tumor scans/X-rays were to be obtained within 4 weeks, fluoro-D-glucose positron emission tomography (FDG-PET) scans within 2 weeks, and Baseline laboratory evaluations within 1 week before first dose.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: Ewing's Sarcoma Primary Cohort

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 milligrams per kilogram (mg/kg) via intravenous (IV) infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 1 included individuals with Ewing's sarcoma who had relapsed within 24 weeks after diagnosis and had received two or more prior chemotherapy regimens.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 2: Ewing's Sarcoma Secondary Cohort
------------------	--

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 2 included individuals with Ewing's sarcoma who had relapsed more than 24 weeks after diagnosis or had only received one prior chemotherapy regimen.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 3: Ewing's Sarcoma Expanded Cohort
------------------	---

Arm description:

Participants 2 to 21 years of age with recurrent or refractory sarcoma received R1507 as 27 mg/kg via IV infusion every 3 weeks until disease progression, intercurrent illness, unacceptable toxicity,

prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 3 included individuals with Ewing's sarcoma who were enrolled and treated following safety evaluation in other cohorts.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 4: Osteosarcoma
------------------	------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 4 included individuals with osteosarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 5: Synovial Sarcoma
------------------	----------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 5 included individuals with synovial sarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 6: Rhabdomyosarcoma
------------------	----------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 6 included individuals with rhabdomyosarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 7a: Alveolar Soft Part Sarcoma
------------------	---------------------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7a included individuals with alveolar soft part sarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 7b: Desmoplastic Small Round Cell Tumors
------------------	---

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7b included individuals with desmoplastic small round cell tumors.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 7c: Extraskeletal Myxoid Chondrosarcoma
------------------	--

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7c included individuals with extraskeletal myxoid chondrosarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 7d: Clear Cell Sarcoma
------------------	-------------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity,

prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7d included individuals with clear cell sarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 7e: Myxoid Liposarcoma
------------------	-------------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7e included individuals with myxoid liposarcoma.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Arm title	Cohort 8: Diagnosis Not Specified
------------------	-----------------------------------

Arm description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 8 included individuals with subtypes of sarcoma not specified in the protocol.

Arm type	Experimental
Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Investigational medicinal product name	R1507
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The drug product R1507 was reconstituted and administered via IV infusion as 9 mg/kg once weekly or 27 mg/kg every 3 weeks, depending upon the cohort in which the participant was enrolled.

Baseline characteristics

Reporting groups

Reporting group title	Cohort 1: Ewing's Sarcoma Primary Cohort
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 milligrams per kilogram (mg/kg) via intravenous (IV) infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 1 included individuals with Ewing's sarcoma who had relapsed within 24 weeks after diagnosis and had received two or more prior chemotherapy regimens.	
Reporting group title	Cohort 2: Ewing's Sarcoma Secondary Cohort
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 2 included individuals with Ewing's sarcoma who had relapsed more than 24 weeks after diagnosis or had only received one prior chemotherapy regimen.	
Reporting group title	Cohort 3: Ewing's Sarcoma Expanded Cohort
Reporting group description: Participants 2 to 21 years of age with recurrent or refractory sarcoma received R1507 as 27 mg/kg via IV infusion every 3 weeks until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 3 included individuals with Ewing's sarcoma who were enrolled and treated following safety evaluation in other cohorts.	
Reporting group title	Cohort 4: Osteosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 4 included individuals with osteosarcoma.	
Reporting group title	Cohort 5: Synovial Sarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 5 included individuals with synovial sarcoma.	
Reporting group title	Cohort 6: Rhabdomyosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 6 included individuals with rhabdomyosarcoma.	
Reporting group title	Cohort 7a: Alveolar Soft Part Sarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7a included individuals with alveolar soft part sarcoma.	
Reporting group title	Cohort 7b: Desmoplastic Small Round Cell Tumors
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7b included individuals with desmoplastic small round cell tumors.	
Reporting group title	Cohort 7c: Extraskeletal Myxoid Chondrosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death.	

Cohort 7c included individuals with extraskeletal myxoid chondrosarcoma.

Reporting group title	Cohort 7d: Clear Cell Sarcoma
-----------------------	-------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7d included individuals with clear cell sarcoma.

Reporting group title	Cohort 7e: Myxoid Liposarcoma
-----------------------	-------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7e included individuals with myxoid liposarcoma.

Reporting group title	Cohort 8: Diagnosis Not Specified
-----------------------	-----------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 8 included individuals with subtypes of sarcoma not specified in the protocol.

Cohort 3 included individuals with Ewing's sarcoma who were enrolled and treated following safety evaluation in other cohorts.	
Reporting group title	Cohort 4: Osteosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 4 included individuals with osteosarcoma.	
Reporting group title	Cohort 5: Synovial Sarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 5 included individuals with synovial sarcoma.	
Reporting group title	Cohort 6: Rhabdomyosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 6 included individuals with rhabdomyosarcoma.	
Reporting group title	Cohort 7a: Alveolar Soft Part Sarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7a included individuals with alveolar soft part sarcoma.	
Reporting group title	Cohort 7b: Desmoplastic Small Round Cell Tumors
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7b included individuals with desmoplastic small round cell tumors.	
Reporting group title	Cohort 7c: Extraskelatal Myxoid Chondrosarcoma
Reporting group description: Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death.	

Cohort 7c included individuals with extraskeletal myxoid chondrosarcoma.

Reporting group title	Cohort 7d: Clear Cell Sarcoma
-----------------------	-------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7d included individuals with clear cell sarcoma.

Reporting group title	Cohort 7e: Myxoid Liposarcoma
-----------------------	-------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 7e included individuals with myxoid liposarcoma.

Reporting group title	Cohort 8: Diagnosis Not Specified
-----------------------	-----------------------------------

Reporting group description:

Participants 2 years of age and older with recurrent or refractory sarcoma received R1507 as 9 mg/kg via IV infusion once weekly until disease progression, intercurrent illness, unacceptable toxicity, prolonged (2-week) time off treatment, withdrawal, loss to follow-up, investigator decision, or death. Cohort 8 included individuals with subtypes of sarcoma not specified in the protocol.

Primary: Percentage of Participants with Complete or Partial Response According to World Health Organization (WHO) Response Criteria in Cohorts 2 to 8

End point title	Percentage of Participants with Complete or Partial Response According to World Health Organization (WHO) Response Criteria in Cohorts 2 to 8 ^{[1][2]}
-----------------	---

End point description:

Participants were assessed for tumor response according to WHO 1979 criteria. Complete response was defined as disappearance of all known disease, confirmed on two consecutive visits less than (<) 4 weeks apart. Partial response was defined as greater than or equal to (≥) 50 percent (%) decrease in total tumor load on two consecutive visits <4 weeks apart. The percentage of participants with either complete or partial response at any time during the study was to be calculated. All Treated Population: All participants who received at least one dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline, every 6 weeks for 24 weeks, then every 12 weeks until disease progression (up to 6 years)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The data were not analyzed because the development program was terminated by the Sponsor.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The data for Cohort 1 are presented as a separate endpoint.

Progression was defined as $\geq 25\%$ increase in area of one or more lesions, or the appearance of new lesions. The median duration of DOR was to be estimated using Kaplan-Meier methodology. All Treated Population.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, every 6 weeks for 24 weeks, then every 12 weeks until disease progression (up to 6 years)

Notes:

[95] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The data for Cohorts 2 to 8 are presented as a separate endpoint.

End point values	Cohort 1: Ewing's Sarcoma Primary Cohort			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[96]			
Units: months				
median (full range (min-max))	(to)			

Notes:

[96] - The data were not analyzed because the development program was terminated by the Sponsor.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 November 2007	The protocol was amended for administrative changes and minor clarifications, as well as updates to the timing of assessments. Blood sampling was made optional for participants <18 years of age. A statistical analysis plan was also added for pharmacokinetic endpoints.
01 August 2008	The protocol amendment was released to clarify the cohorts/study design, including the planned interim analysis for the Ewing's Sarcoma Primary Cohort. Secondary endpoints for TTP, FFS, and OS were also added. The minimum eligible age was changed from 12 years to 2 years. Among several other clarifications and formatting updates, the infusion time of R1507 was specified.
09 July 2009	The final protocol amendment added the Ewing's Sarcoma Expanded Cohort to allow testing of R1507 in a 3-week dosing schedule. Additional updates were made to accommodate the new cohort, including a special pharmacokinetic sampling schedule. The post-infusion monitoring time was also shortened on the basis of favorable tolerability in other clinical studies of R1507.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
19 February 2014	The last dose of study drug was received, after which the study was closed by the Sponsor on the basis of decisions to discontinue further development of R1507. The decision was not due to safety concerns.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was closed to further enrollment due to a decision by the Sponsor to discontinue development of R1507. The decision was made based upon available data from other completed/ongoing trials of R1507 and was not due to safety concerns.

Notes:
