

Clinical trial results:

Cilengitide for subjects with newly diagnosed glioblastoma multiforme and methylated MGMT gene promoter - a multicenter, open-label, controlled Phase III study, testing cilengitide in combination with standard treatment (temozolomide with concomitant radiation therapy, followed by temozolomide maintenance therapy) versus standard treatment alone (CENTRIC)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 November 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 November 2012
Global end of trial reached?	Yes
Global end of trial date	30 July 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to assess whether overall survival time in subjects receiving cilengitide (2000 mg twice weekly intravenously in combination with standard treatment is statistically significantly prolonged compared to subjects receiving standard treatment alone.

Protection of trial subjects:

In this trial highest medical and ethical standards were followed, in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 September 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	420
From 65 to 84 years	125
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

First/last subject (informed consent): Sep 2008/Aug 2011. Clinical data cut-off: 19 Nov 2012, Study completion date: Aug 2013.

Pre-assignment

Screening details:

Enrolled: 3471 screened for eligibility; 2926 excluded (mainly due to unmethylated O6-methylguanine-DNA methyltransferase status and non-fulfillment of inclusion or exclusion criteria), 545 subjects randomized.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cilengitide + Temozolomide + Radiotherapy

Arm description:

Cilengitide 2000 milligram (mg) twice weekly over 1 hour intravenous infusion from Weeks -1 to 77, Temozolomide (TMZ) 75 milligram per square meter [mg/m^2] intravenously once daily from Weeks 1 to 6, from Week 11 onward, TMZ was given as maintenance treatment at a dose of 150-200 mg/m^2 for consecutive 5 days every 4 weeks until Week 34 and radiotherapy (RTX) at a dose of 2 Gray (Gy) per fraction once daily, 5 days per week from Weeks 1 to 6 or until occurrence of progressive disease, unacceptable toxicity, or withdrawal for any other reason. Continuation of cilengitide treatment after Week 77 was optional in subjects without disease progression, If considered beneficial in the opinion of the Investigator.

Arm type	Experimental
Investigational medicinal product name	Temozolomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Temozolomide (TMZ) 75 mg/m^2 intravenously once daily from Weeks 1 to 6, from Week 11 onward, TMZ was given as maintenance treatment at a dose of 150-200 mg/m^2 for consecutive 5 days every 4 weeks until Week 34

Investigational medicinal product name	Cilengitide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Cilengitide 2000 milligram (mg) twice weekly over 1 hour intravenous infusion from Weeks -1 to 77

Arm title	Temozolomide + Radiotherapy
------------------	-----------------------------

Arm description:

TMZ 75 mg/m^2 administered intravenously once daily from Weeks 1 to 6, from Week 11 onward, TMZ was given as maintenance treatment at a dose of 150-200 mg/m^2 for consecutive 5 days every 4 weeks until Week 34 and RTX at a dose of 2 Gy per fraction once daily, 5 days per week from Weeks 1 to 6 or until occurrence of progressive disease, unacceptable toxicity, or withdrawal for any other reason.

Arm type	Active comparator

Secondary: European organization for the research and treatment of cancer quality of life questionnaire core 30 (EORTC QLQ-C30) sub-scale scores

End point title	European organization for the research and treatment of cancer quality of life questionnaire core 30 (EORTC QLQ-C30) sub-scale scores
-----------------	---

End point description:

The EORTC QLQ-C30 is a questionnaire including following sub-scales: global health status, functional scales (physical functioning, role functioning, emotional functioning, cognitive functioning, and social activity), symptom scales (fatigue, nausea and vomiting, and pain) and single items (dyspnoea, insomnia, appetite loss, constipation, diarrhoea and financial difficulties). Scores are averaged for each scale and transformed to 0-100 scale; higher score indicates better quality of life on global health status and functional scales and worse quality of life on symptom scales and financial difficulty scale. This endpoint was assessed in all subjects who were randomized to study treatment and who were evaluable for this outcome measure. 'n' signifies those subjects who were evaluable for the specified category.

End point title	European organization for the research and treatment of cancer quality of life questionnaire brain module (EORTC QLQ-BN20) sub-scale scores
-----------------	---

End point description:

The QLQ-BN20 is a questionnaire specifically designed as the QLQ-C30 supplement for the evaluation of quality of life in brain tumor subjects. It includes 4 multi-item sub-scales: future uncertainty, visual disorder, motor dysfunction, communication deficits, and 7 single-item scales: headaches, seizures, drowsiness, itchy skin, hair loss, weakness of legs, and bladder control. All items are rated on a 4-point Likert-type scale ('1=not at all', '2=a little', '3=quite a bit' and '4=very much'), and are linearly transformed to a 0-100 scale, with higher scores indicating more severe symptoms. This endpoint was

assessed in all the subjects who were randomized and who were evaluable for this outcome measure. 'n' signifies those subjects who were evaluable for the specified category.

Secondary: Number of subjects with adverse events (AEs), serious AEs, treatment-related AEs, treatment-related serious AEs, AEs leading to death, treatment related AEs leading to death, AEs of Grade 3 or 4 and treatment related AEs of Grade 3 or 4

End point title	Number of subjects with adverse events (AEs), serious AEs, treatment-related AEs, treatment-related serious AEs, AEs leading to death, treatment related AEs leading to death, AEs of Grade 3 or 4 and treatment related AEs of Grade 3 or 4
-----------------	--

End point description:

An AE is defined as any new untoward medical occurrences/worsening of pre-existing medical condition without regard to possibility of causal relationship. Treatment-emergent AEs are the events between first dose of study drug and up to 28 days after last dose of study treatment. A Serious AE is an AE that resulted in any of the following outcomes: death; life threatening; persistent/significant disability/incapacity; initial or prolonged inpatient hospitalization; congenital anomaly/birth defect. Treatment-related AEs are the AEs which are suspected to be reasonably related to the study treatment (cilengitide, or radiotherapy, or temozolomide) as per investigator assessment. The severity of AEs was assessed according to the National Cancer Institute-Common Toxicity Criteria (NCI-CTCAE) (version 3.0): Grade 1=mild, Grade 2=moderate, Grade 3=severe, Grade 4=life threatening or disabling. Note: Death (Grade 5) was regarded as an outcome. This endpoint was assessed in Safety population.

End point type	Secondary
----------------	-----------

End point timeframe:

Time from first dose up to 28 days after last dose of study treatment, reported between day of first subject randomized, that is, Sep 2008 until cut-off date (19 Nov 2012)

End point values	Cilengitide + Temozolomide + Radiotherapy	Temozolomide + Radiotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	263	258		
Units: Subjects				
AEs	261	253		
Serious AEs	138	115		
Treatment-related AEs	229	222		
Treatment-Related Serious AEs	55	47		
AEs leading to death	11	9		
Treatment-related AEs leading to death	3	3		
AEs with NCI–CTC toxicity Grade 3 or 4	169	158		
Treatment-related AEs of Grade 3 or 4	100	101		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with AEs belonging to standardized medical dictionary for regulatory activities (MedDRA) queries (SMQs) thromboembolic events and haemorrhage with NCI–CTC toxicity Grade 3 or 4

End point title	Number of subjects with AEs belonging to standardized medical dictionary for regulatory activities (MedDRA) queries (SMQs) thromboembolic events and haemorrhage with NCI–CTC toxicity Grade 3 or 4
-----------------	---

End point description:

Thromboembolic events (standardized MedDRA query [SMQ]) Grade 3 or 4 AEs encompassed hemiparesis and cerebrovascular accident, pulmonary embolism, and deep vein thrombosis. Thromboembolic events (SMQ) of any grade and of Grade 3 or 4 were generally more frequent in the Cilengitide + Temozolomide/Radiotherapy group than in the Temozolomide/Radiotherapy group but were still in the expected range of this patient population. The severity of AEs was assessed according to the National Cancer Institute–Common Toxicity Criteria (NCI–CTCAE) (version 3.0): Grade 1=mild, Grade 2=moderate, Grade 3=severe, Grade 4=life threatening or disabling. Note: Death (Grade 5) was regarded as an outcome. This endpoint was assessed in safety analysis population.

SMQ:Thromboembolic events	35	23		
SMQ: Haemorrhage	4	4		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with clinically significant abnormal electrocardiogram (ECG) and lab parameters

End point title	Number of subjects with clinically significant abnormal electrocardiogram (ECG) and lab parameters
-----------------	--

End point description:

Any clinically significant abnormal ECG and lab finding was planned to be reported as AE only so they have been captured in the below mentioned adverse event section.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 50 months

End point values	Cilengitide + Temozolomide + Radiotherapy	Temozolomide + Radiotherapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[7]	0 ^[8]		
Units: Subjects				

Notes:

[7] - Clinically significant abnormal ECG and lab finding was planned to be reported as AE only

[8] - Clinically significant abnormal ECG and lab finding was planned to be reported as AE only

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Time from first dose up to 28 days after last dose of study treatment, reported between day of first participant randomized, that is, Sep 2008 until cut-off date (19 Nov 2012)

Assessment type	Non-systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	15

Reporting groups

Reporting group title	Temozolomide + Radiotherapy
-----------------------	-----------------------------

Reporting group description:

TMZ 75 mg/m² administered intravenously once daily from Weeks 1 to 6, from Week 11 onward, TMZ was given as maintenance treatment at a dose of 150-200 mg/m² for consecutive 5 days every 4 weeks until Week 34 and RTX at a dose of 2 Gy per fraction once daily, 5 days per week from Weeks 1 to 6 or until occurrence of progressive disease, unacceptable toxicity, or withdrawal for any other reason.

Reporting group title	Cilengitide + Temozolomide + Radiotherapy
-----------------------	---

Reporting group description:

Cilengitide 2000 milligram (mg) twice weekly over 1 hour intravenous infusion from Weeks -1 to 77, Temozolomide (TMZ) 75 milligram per square meter [mg/m²] intravenously once daily from Weeks 1 to 6, from Week 11 onward, TMZ was given as maintenance treatment at a dose of 150-200 mg/m² for consecutive 5 days every 4 weeks until Week 34 and radiotherapy (RTX) at a dose of 2 gray (Gy) per fraction once daily, 5 days per week from Weeks 1 to 6 or until occurrence of progressive disease, unacceptable toxicity, or withdrawal for any other reason. Continuation of cilengitide treatment after Week 77 will be optional in participants without disease progression.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 March 2010	<p>To adapt certain processes of study conduct based on the global practical experience. These included the following:</p> <p>The eligibility decision could be based on local laboratory blood results if the process time for the central laboratory could result in the subject being ineligible (however the respective central laboratory tests still to be performed)</p> <p>The detailed time windows from screening to randomization were revised to allow more flexibility.</p> <p>The inclusion criterion "normal PTT" was revised to "below ULN PTT".</p> <p>Based on updated safety data in newly diagnosed GBM patients and in alignment with other recently initiated study protocols of cilengitide combination treatments (EMR 200052-013 and EMR 200037-014), a case-by-case decision was allowed to potentially use therapeutic doses of heparin (after initial resolution of a disease-related thromboembolic event, e.g., a DVT) with cilengitide treatment after resolution of the event.</p> <p>To introduce a general description of cilengitide handling independent of dose strength by referring to the handling instructions.</p> <p>To adapt the technical cut-off value of the applied MGMT assay to reflect the technical modalities of this assay version based on the current data set (actual nadir of the bimodal distribution).</p> <p>To include minor corrections and clarifications to the protocol.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
