Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001722-PIP01-14
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 June 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 June 2010
Global end of trial reached?	Yes
Global end of trial date	08 June 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this Phase 1b study is to assess the safety of escalating doses of AVI-4658 when administered by 12 weekly doses in boys with Duchenne muscular dystrophy (DMD).

Protection of trial subjects:

In addition to the informed consent process required of the patient's parent(s) or legal guardian(s), all possible steps to ensure the protection of this vulnerable class of trial patients, i.e., a pediatric population with Duchenne muscular dystrophy (DMD) were taken including the requirement of assent by each patient, where appropriate.

The study site was responsible for producing the patient informed assent form and the parent(s)/legal guardian(s) informed consent form. Before initiation of the study, the assent and consent forms were submitted for approval to both the Sponsor and to the EC.

Prior to the conduct of any pre-entry tests not performed routinely in the treatment of the patient, the Investigator fully explained the study to the patient and the patient's parent(s) or legal guardian(s). The explanation was sufficiently detailed to allow for an informed decision to participate made by the patient and the patient's parent(s) or legal guardian(s). If the patient (with permission from the patient's parent[s] or legal guardian[s]) was willing to participate in the study, he was requested to give written informed assent, where appropriate, and the patient's parent(s) or legal guardian(s) were requested to give written informed consent. In accordance with institutional and applicable local regulations, assent and written informed consent were obtained prior to performing any study-related procedures, including (non-routine) Screening assessments and administration of study drug.

Administration via the IV route over 60 minutes was selected for patient comfort and because IV access was needed for safety laboratory and PK sample collection. Anesthetic topical cream was used prior to IV placement.

Background therapy:

Patients continued on their standard of care treatment for DMD. 18 of the 19 patients were on some kind of Corticosteroid Treatment including Prednisoline, Hydrocortisone and Deflazacort.

1 patient - no corticosteroid treatments
5 patients - Prednisolone regimen
9 patients - Prednisoline regimen and 1 or more hydrocortisone infusions
1 patient - Deflazacort regimen
2 patients - Prednisoline, Hydrocortisone and Deflazacort treatments

Evidence for comparator: -

Actual start date of recruitment	07 January 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 19
Worldwide total number of subjects	19
EEA total number of subjects	19

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	17
Adolescents (12-17 years)	2
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients were recruited at two sites in the United Kingdom in London and Newcastle Upon Tyne. The first subject was enrolled in January 2009 and received their first study drug dose February 18, 2009. The last subject was enrolled November 27, 2009 and received their first study drug dose on December 14, 2009.

Pre-assignment

Screening details:

The first patient was screened February 11, 2009 and the last was screened December 6, 2009. There were 20 patients screened and 19 of these patients were enrolled. The patient who screened failed did not have the correct mutation to be included in the trial.

Period 1

Period 1 title	Open Label Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1 - 0.5mg/kg

Arm description:

Subjects in this group received a 0.5 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

Arm title	Cohort 2 - 1.0 mg/kg/wk
------------------	-------------------------

Arm description:

Subjects in this group will receive a 1.0 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	SRP-4658
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

Arm title	Cohort 3 - 2.0 mg/kg/wk
------------------	-------------------------

Arm description:

Subjects in this group will receive a 2.0 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	SRP-4658
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

Arm title	Cohort 4 - 4.0 mg/kg/wk
------------------	-------------------------

Arm description:

Subjects in this group will receive a 4.0 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	SRP-4658
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

Arm title	Cohort 5 - 10 mg/kg/wk
------------------	------------------------

Arm description:

Subjects in this group will receive a 10.0 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period

Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	SRP-4658
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

Arm title	Cohort 6 - 20mg/kg/wk
Arm description: Subjects in this group will receive a 20.0 mg/kg/wk dose of AVI-4658 over 12 weekly IV infusions in 50 mL of normal saline solution over a 60-minute period	
Arm type	Experimental
Investigational medicinal product name	Eteplirsen
Investigational medicinal product code	AVI-4658
Other name	SRP-4658
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Eteplirsen, formulated in phosphate buffered solution, was supplied in single-use vials at a concentration of 100 mg/mL. Six cohorts of patients were sequentially allocated to receive 0.5, 1.0, 2.0, 4.0, 10.0, or 20.0 mg/kg/wk IV infusions of eteplirsen for 12 weeks. Eteplirsen was diluted up to 50 mL with normal saline solution into a syringe and administered IV over a 60 minute period.

Lot numbers of eteplirsen used in this study: 44GD-DE01 and 60GD-DE01

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 March 2009	Decreased duration of follow-up period from 40 to 14 weeks, decreased number of patients per each dose cohort, updated DSMB responsibilities, modified inclusion and exclusion criteria to expand patient qualification, modified study termination criteria, eliminated most overnight stays after dosing visits. Altered various data collection requirements in the Schedule of Assessments, including: frequency of ECG and PFT assessments, ECHO procedures, lab assessments, muscle function tests, blood and urine collection. Added 6MWT and changed drug diluent to normal saline.
23 June 2009	Added 2 additional dose cohorts with dosage of 10.0 and 20.0 mg/kg/wk. Added 10 day window to obtain Baseline StepWatch data, lab assessments, physical exam and vitals Added lab assessments at Week 3
02 March 2010	Added exon skipping as a measurement of exploratory efficacy Removed reference to full passive range of ankle dorsiflexion bilaterally throughout the protocol Specified that assays relevant to muscle biopsy were to be performed at GOSH

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the small number of study participants, a single adverse event (AE) in 1 patient exceeds the reporting threshold of 5%. Refer to the "Post-Hoc Outcome Measures" for a summary of frequent and related AEs.
