

Clinical trial results:

Pharmacokinetic Comparison of Advate (rAHF-PFM) With Recombinate (rAHF) in

Patients With Severe Hemophilia A: A Phase 4, Prospective, Randomized, Controlled,

Cross-over, Single Center Study

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No	No

1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 March 2010
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 February 2009
Global end of trial reached?	Yes
Global end of trial date	18 February 2009
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study was to further evaluate observations of decreased efficacy in subjects who had been switched to Advate (rAHF-PFM) from Recombinate (rAHF) by comparing the pharmacokinetic (PK) parameters of the two products in PTPs with severe hemophilia A (factor VIII level < 1%) in whom decreased efficacy with Advate (rAHF-PFM) compared to Recombinate (rAHF) had been observed clinically. Specifically, the following PK parameters were compared: Area under the plasma concentration vs. time curve from 0 to 48 hours (AUC 0-48h), total area under the plasma concentration vs. time curve (AUC 0-inf), plasma half-life, maximum concentration (C_{max}), minimal time to reach maximum concentration (T_{max}), incremental recovery (IR), clearance (Cl), mean residence time (MRT), volume of distribution at steady state (V_{ss}).

Protection of trial subjects:

This study was conducted in accordance with the clinical protocol, the International Conference on Harmonisation Guideline for Good Clinical Practice E6 (ICH GCP, April 1996), Title 21 of the US Code of Federal Regulations (US CFR), the European Clinical Trial Directive (2001/20/EC and 2005/28/EC), and applicable national and local regulatory requirements.

Background therapy: -

Evidence for comparator:

The purpose of this study was to compare the pharmacokinetic parameters of Advate (rAHF-PFM) versus Recombinate (rAHF) in previously treated patients (PTPs) with severe hemophilia A (factor VIII level < 1%) in whom decreased efficacy with Advate (rAHF-PFM) compared to Recombinate (rAHF) was observed clinically after they had been switched to Advate (rAHF-PFM) from Recombinate (rAHF).

Actual start date of recruitment	31 March 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 9
Worldwide total number of subjects	9
EEA total number of subjects	9

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	1
Adults (18-64 years)	8
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

9 unique participants were enrolled and treated at a single study site in Germany.

Pre-assignment

Screening details:

Participants required a factor VIII (FVIII) washout period ≥ 48 hours before receiving any pharmacokinetic (PK) infusions and could not be actively bleeding at the time of the infusion.

Pre-assignment period milestones

Number of subjects started	9
Number of subjects completed	9

Period 1

Period 1 title	PK Infusions (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	PK Infusion with Advate rAHF-PFM and then Recombinate rAHF

Arm description:

All 9 treated subjects received a PK infusion with ADVATE and a PK infusion with Recombinate. The order of the PK infusions was determined by randomization. Infusion 2 was to be administered 7-28 days after first PK infusion.

Arm type	Experimental
Investigational medicinal product name	Advate
Investigational medicinal product code	
Other name	rAHF-PFM (Antihemophilic Factor (Recombinant) – Plasma/Albumin Free Method)
Pharmaceutical forms	Powder and solvent for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 50 +/-5 IU/kg for PK infusion

Investigational medicinal product name	Recombine
Investigational medicinal product code	
Other name	rAHF (Antihemophilic Factor (Recombinant))
Pharmaceutical forms	Powder and solution for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Dose of 50 +/-5 IU/kg for PK infusion

Arm title	PK Infusion with Recombinate rAHF and then Advate rAHF-PFM
------------------	--

Arm description:

All 9 treated subjects received a PK infusion with ADVATE and a PK infusion with Recombinate. The order of the PK infusions was determined by randomization. Infusion 2 was to be administered 7-28 days after first PK infusion.

Arm type	Active comparator

Reporting groups

Reporting group title	All Study Participants
-----------------------	------------------------

Reporting group description:

Includes all 9 treated subjects (ie, all subjects who received a PK infusion with Advate rAHF-PFM and a PK infusion with Recombinate rAHF).

Serious adverse events	All Study Participants		
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 9 (0.00%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	All Study Participants		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	0 / 9 (0.00%)		

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No AEs were reported for any of the 9 subjects enrolled and treated in this study.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 July 2008	<ul style="list-style-type: none">- Original target enrollment of 15-20 previously treated patients (PTPs) reduced to 15 PTPs- Exclusion criterion of detectable factor VIII inhibitor titer ≥ 0.4 BU not limited to central laboratory measurements any more but also applicable when measured at the local laboratory- More flexibility allowed in the choice of butterfly gauge catheter to be used for infusion of the study product or for blood draws: change from previously allowed 23-gauge butterfly catheter to 21- or 23-gauge butterfly catheter

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
