

**Clinical trial results:****A Randomized, Double-Blind, Placebo-Controlled, Parallel-Group, Multi-Center Study to Evaluate the Effects of a One-Year Course of Fluticasone Furoate Nasal Spray 110mcg QD on Growth in Pre-Pubescent, Pediatric Subjects with Perennial Allergic Rhinitis  
Summary**

EudraCT number	2007-005148-26
Trial protocol	FR IT
Global end of trial date	17 March 2011

**Results information**

Result version number	v1 (current)
This version publication date	13 April 2016
First version publication date	24 June 2015

**Trial information****Trial identification**

Sponsor protocol code	FFR101782
-----------------------	-----------

**Additional study identifiers**

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

**Sponsors**

Sponsor organisation name	GlaxoSmithKline
Sponsor organisation address	980 Great West Road, Brentford, Middlesex, United Kingdom,
Public contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,
Scientific contact	GSK Response Center, GlaxoSmithKline, 1 866-435-7343,

Notes:

**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 May 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 March 2011
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to characterize, as accurately as possible, the estimation of the difference in pre-pubescent growth velocities between subjects treated continuously for one year with FFNS 110mcg QD, the highest dose approved for pediatric use in the US, and placebo nasal spray as determined by stadiometry.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 November 2007
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 18
Country: Number of subjects enrolled	Argentina: 88
Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	Chile: 154
Country: Number of subjects enrolled	Peru: 37
Country: Number of subjects enrolled	United States: 165
Worldwide total number of subjects	474
EEA total number of subjects	18

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	474
Adolescents (12-17 years)	0

Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

After screening and a 16-week Baseline Period (Pd.), participants (par.) were randomized 1:1 to each treatment arm during the 52-week Treatment Pd. After the Treatment Pd., par. entered an 8-week Follow-up (FU) Pd. during which all par. received placebo nasal spray. Par. completing at least 12 weeks of treatment were to complete the FU Pd.

### Period 1

Period 1 title	52-week Double-blind Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo: Double-blind Treatment Period

Arm description:

Participants were randomized to receive matching placebo nasal spray OD as 2 sprays per nostril during the 52-week Double-blind Treatment Period

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

Once daily for 52 weeks

<b>Arm title</b>	FFNS 110 mcg: Double-blind Treatment Period
------------------	---

Arm description:

Participants were randomized to receive fluticasone furoate nasal spray (FFNS) 110 micrograms (mcg) OD as 2 sprays per nostril during the 52-week Double-blind Treatment Period

Arm type	Experimental
Investigational medicinal product name	Fluticasone furoate nasal spray (110 mg QD)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal spray
Routes of administration	Intranasal use

Dosage and administration details:

Once daily fluticasone furoate nasal spray (110 mg) once daily for 52 weeks

<b>Number of subjects in period 1</b>	Placebo: Double-blind Treatment Period	FFNS 110 mcg: Double-blind Treatment Period
Started	237	237
Completed	187	186
Not completed	50	51
Consent withdrawn by subject	20	20
Physician decision	2	4
Adverse event, non-fatal	5	5
Reached Protocol-defined Stop Criteria	3	-
Lost to follow-up	5	7
Lack of efficacy	3	-
Protocol deviation	12	15

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo: Double-blind Treatment Period
-----------------------	--

Reporting group description:

Participants were randomized to receive matching placebo nasal spray OD as 2 sprays per nostril during the 52-week Double-blind Treatment Period

Reporting group title	FFNS 110 mcg: Double-blind Treatment Period

Asian and White	1	1	2
Native Hawaiian/ Other Pacific Islander and White	1	0	1

## End points

### End points reporting groups

Reporting group title	Placebo: Double-blind Treatment Period
Reporting group description: Participants were randomized to receive matching placebo nasal spray OD as 2 sprays per nostril during the 52-week Double-blind Treatment Period	
Reporting group title	FFNS 110 mcg: Double-blind Treatment Period
Reporting group description: Participants were randomized to receive fluticasone furoate nasal spray (FFNS) 110 micrograms (mcg) OD as 2 sprays per nostril during the 52-week Double-blind Treatment Period	

### Primary: Mean difference in growth velocities between subjects treated with FFNS 110 µg QD and placebo nasal spray as determined by stadiometry

End point title	Mean difference in growth velocities between subjects treated with FFNS 110 µg QD and placebo nasal spray as determined by stadiometry
End point description: Height was measured (triplicate measurements) in pre-pubescent pediatric participants via stadiometry at each clinic visit during the entire 76-week study period (16-week Baseline Period, 52-week DB Treatment Period and 8-week Follow-up Period). For each study period (Baseline, Treatment, and Follow-up), growth velocity was calculated by fitting a regression line to all height measurements recorded for the participant during the period and was determined by the slope of the fitted regression line. Growth Population: all randomized participants with height assessments via stadiometry from at least three post-randomization clinic visits during the DB Treatment Period.	
End point type	Primary
End point timeframe: Baseline Period (Weeks -16 to 0) and DB Treatment Period (Weeks 1 to 52)	

End point values	Placebo: Double-blind Treatment Period	FFNS 110 mcg: Double-blind Treatment Period		
Subject group type	Reporting group	Reporting group

### Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description: An analysis of covariance (ANCOVA) was performed to estimate the mean treatment difference in growth velocity over the treatment period, adjusting for baseline growth velocity, age, gender, and country.	
Comparison groups	Placebo: Double-blind Treatment Period v FFNS 110 mcg: Double-blind Treatment Period

Number of subjects included in analysis	435
Analysis specification	Pre-specified
Analysis type	superiority
Parameter estimate	Mean difference (final values)
Point estimate	-0.27
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.48
upper limit	-0.06

### Secondary: Mean 24-hour urinary free cortisol excretion

End point title	Mean 24-hour urinary free cortisol excretion
End point description:	
<p>Hypothalamic-pituitary-adrenal (HPA) axis function was assessed by the measurement of urinary free cortisol, using urine samples collected over the course of 24 hours by the parent/guardian in the participants' home on an out-patient basis within 7 days prior to the indicated time points. Detailed verbal instructions and a take-home instruction card on how to conduct the 24-hour urine collection were provided to the parent/guardian before each collection interval. Urine Cortisol Population: all randomized participants excluding those whose urine samples were considered to have confounding factors affecting the interpretation of the 24-hour urinary cortisol results. One participant in each arm had a Baseline value &lt;1.0 and was not analyzed. Some participants had samples that were not acceptable for analysis.</p>	
End point type	Secondary
End point timeframe:	
Randomization/end of 16-week Baseline Period (Week 0), End of 52-week DB Treatment Period (Week 52), and end of 8-week Follow-up Period (Week 60)

## Secondary: Number of participants with the indicated shifts from Baseline in nasal examination (NE) results

End point title	Number of participants with the indicated shifts from Baseline in nasal examination (NE) results
-----------------	--

End point description:

NE included the evaluation of the size of ulcers/polyps (of nasal turbinates/septa) and assessment for mucosal bleeding (MB) at all study visits. Polyps are non-cancerous growths; ulcers are breaks in the skin/mucous membrane with loss of surface tissue, disintegration, and necrosis of epithelial tissue. For MB, Improved=shift from present ( $\geq 1$  nostril) to absent (both nostrils); Worsened=shift from absent (both nostrils) to present ( $\geq 1$  nostril). For polyps/ulcers, Improved=shift from large to small or from small to none; Worsened=shift from none to small or from small to none ( $\geq 1$  nostril). ITT=Intent to Treat: all participants who had been randomized to and received at least one dose of double-blind study medication. Most participants received examinations at each visit; however, on some occasions, some assessments were not completed for various reasons.

No statistical analyses for this end point

### Secondary: Mean values for urine pH

End point title	Mean values for urine pH
-----------------	--------------------------

End point description:

Urine pH is an acid-base measurement. pH is measured on a numeric scale ranging from 0 to 14; values on the scale refer to the degree of alkalinity or acidity. A pH of 7 is neutral. A pH less than 7 is acidic, and a pH greater than 7 is basic. Normal urine has a slightly acid pH (5.0 - 6.0). Only those participants remaining in the study and contributing viable samples at the various time points were analyzed.

End point type	Secondary
