

Clinical trial results:

A phase II, open, study to assess the immunogenicity and reactogenicity of GlaxoSmithKline (GSK) Biologicals' combined DTPa-HBV-IPV/Hib vaccine when administered as a booster dose to children aged 16-20 months, previously primed with GSK Biologicals' combined DSSITGDPa-HBV-IPV/Hib vaccine, containing diphtheria toxoid from the Statens Serum Institute (SSI) of Denmark and tetanus toxoid from GSK Biologicals' Kft [GD] or with GSK Biologicals licensed DTPa-HBV-IPV/Hib vaccine (Infanrix hexa) in the primary vaccination study DTPa-HBV-IPV-116 (106786)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No	No

1901/2006 apply to this trial?	
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 March 2009
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 August 2008
Global end of trial reached?	Yes
Global end of trial date	18 August 2008
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the immunogenicity of the DSSITGDPa-HBV-IPV/Hib vaccine (preservative-free or preservative-containing), in terms of persistence of the antibodies to all vaccine antigens at the time of the booster vaccination.

To assess the immunogenicity of a booster dose of DTPa-HBV-IPV/Hib vaccine given after primary vaccination with the DSSITGDPa-HBV-IPV/Hib vaccine (preservative-free or preservative-containing), in terms of response to all vaccine antigens.

Protection of trial subjects:

All subjects were supervised after vaccination/product administration with appropriate medical treatment readily available. Vaccines were administered by qualified and trained personnel. Vaccines were administered only to eligible subjects that had no contraindications to any components of the vaccines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 February 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 403
Worldwide total number of subjects	403
EEA total number of subjects	403

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	403
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

During the screening the following steps occurred: check for inclusion/exclusion criteria, contraindications/precautions, medical history of the subjects and signing informed consent forms.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Infanrix Hexa PF Group

Arm description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the preservative-free (PF) formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Arm type	Experimental
Investigational medicinal product name	Preservative-free Infanrix hexa
Investigational medicinal product code	
Other name	DSSI-TGD-Pa-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one vaccine dose administered intramuscularly into the anterolateral quadrant of the right thigh.

Investigational medicinal product name	Infanrix hexa
Investigational medicinal product code	
Other name	DTPa-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one booster dose of study vaccine, intramuscularly into the anterolateral right thigh.

Arm title	Infanrix Hexa PC Group
------------------	------------------------

Arm description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the preservative-containing (PC) formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Arm type	Experimental
Investigational medicinal product name	Preservative-containing Infanrix hexa
Investigational medicinal product code	
Other name	DSSI-TGD-Pa-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one vaccine dose administered intramuscularly into the anterolateral quadrant of the

right thigh.

Investigational medicinal product name	Infanrix hexa
Investigational medicinal product code	
Other name	DTPa-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one booster dose of study vaccine, intramuscularly into the anterolateral right thigh.

Arm title	Control Group
------------------	---------------

Arm description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the licensed formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Arm type	Active comparator
Investigational medicinal product name	Licensed Infanrix hexa
Investigational medicinal product code	
Other name	DTPa-HBV-IPV/Hib
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received one vaccine dose administered intramuscularly into the anterolateral quadrant of the right thigh, in the primary phase and one booster dose of the same vaccine in the booster phase.

Primary: Number of seroprotected subjects against diphtheria (D) and tetanus (T) toxoids

End point title	Number of seroprotected subjects against diphtheria (D) and tetanus (T) toxoids ^{[23][24]}
-----------------	---

End point description:

A seroprotected subject was defined as a subject with anti-D and anti-T antibody concentrations greater than or equal to (\geq) 0.1 IU/mL.

The analysis was performed on the According-to-Protocol (ATP) cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Primary
----------------	---------

End point timeframe:

One month after the booster vaccination (At Month 1)

Notes:

[23] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

[24] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Infanrix Hexa PF Group and the Infanrix Hexa PC Group.

End point values	Infanrix Hexa PF Group	Infanrix Hexa PC Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	113	119		
Units: Subjects				
Anti-D	112	118		
Anti-T	113	118

No statistical analyses for this end point

Secondary: Anti-HBs antibody concentrations

End point title	Anti-HBs antibody concentrations ^[49]
-----------------	--

End point description:

Antibody concentrations were presented as geometric mean concentrations (GMCs), expressed in mIU/mL.

The analysis was performed on the ATP cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Secondary
----------------	-----------

End point timeframe:

Before (Month 0) and one month after (Month 1) the booster vaccination

Notes:

[49] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Control Group.

End point values	Control Group			
Subject group type	Reporting group			
Number of subjects analysed	118			
Units: mIU/mL				
geometric mean (confidence interval 95%)				
Anti-HBs, M0 [N=110]	139.8 (107.2 to 182.3)			
Anti-HBs, M1 [N=118]	6132.7 (4587.8 to 8197.9)			

Statistical analyses

No statistical analyses for this end point

Secondary: Anti-poliovirus type 1, type 2 and type 3 antibody titers

End point title	Anti-poliovirus type 1, type 2 and type 3 antibody titers ^[50]
-----------------	---

End point description:

Antibody titers were presented as geometric mean titers (GMTs).

The analysis was performed on the ATP cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Secondary
----------------	-----------

End point timeframe:

Before (Month 0) and one month after (Month 1) the booster vaccination

Notes:

[50] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Control Group.

End point values	Control Group			
Subject group type	Reporting group			
Number of subjects analysed	113			
Units: Titers				
geometric mean (confidence interval 95%)				
Anti-polio 1, M0 [N=109]	21.6 (17.1 to 27.4)			
Anti-polio 1, M1 [N=113]	1288.8 (1029.1 to 1614)			
Anti-polio 2, M0 [N=109]	11.8 (9.2 to 15)			
Anti-polio 2, M1 [N=113]	1231 (961 to 1576.9)			
Anti-polio 3, M0 [N=109]	21.3 (16.4 to 27.7)			

Anti-polio 3, M1 [N=113]	1794.8 (1426.8 to 2257.7)			
--------------------------	---------------------------	--	--	--

Statistical analyses

No statistical analyses for this end point

Secondary: Anti-PRP antibody concentrations

End point title	Anti-PRP antibody concentrations ^[51]
-----------------	--

End point description:

Antibody concentrations were presented as geometric mean concentrations (GMCs), expressed in µg/mL.

The analysis was performed on the ATP cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Secondary
----------------	-----------

End point timeframe:

Before (Month 0) and one month after (Month 1) the booster vaccination

Notes:

[51] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Control Group.

End point values	Control Group			
Subject group type	Reporting group			
Number of subjects analysed	119			
Units: µg/mL				
geometric mean (confidence interval 95%)				
Anti-PRP, M0 [N=111]	0.487 (0.383 to 0.62)			
Anti-PRP, M1 [N=119]	77.087 (60.224 to 98.672)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of subjects with a vaccine response to PT, FHA and PR

End point title	Number of subjects with a vaccine response to PT, FHA and
-----------------	---

End point description:

Vaccine response was defined as the appearance of antibodies in subjects who were initially seronegative (S-) (i.e. with concentrations < cut-off value) or at least doubling of pre-vaccination antibody concentrations in subjects who were initially seropositive (S+) (i.e. with concentrations > cut-off value).

The analysis was performed on the ATP cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Secondary
----------------	-----------

End point timeframe:

One month after the booster dose (At Month 1)

Notes:

[52] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Control Group.

End point values	Control Group			
Subject group type	Reporting group			
Number of subjects analysed	111			
Units: Subjects				
Anti-PT, S- [N=17]	17			
Anti-PT, S+ [N=93]	93			
Anti-PT, Total [N=110]	110			
Anti-FHA, S- [N=0]	0			
Anti-FHA, S+ [N=109]	105			
Anti-FHA, Total [N=109]	105			
Anti-PRN, S- [N=12]	12			
Anti-PRN, S+ [N=99]	98			
Anti-PRN, Total [N=111]	110			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of seroprotected subjects against polyribosyl-ribitol-phosphate (PRP)

End point title	Number of seroprotected subjects against polyribosyl-ribitol-phosphate (PRP) ^[53]
-----------------	--

End point description:

A seroprotected subject was defined as a subject with anti-PRP antibody concentrations ≥ 0.15 $\mu\text{g/mL}$. Also reported are the number of participants with anti-PRP antibody concentrations ≥ 1.0 $\mu\text{g/mL}$. The analysis was performed on the ATP cohort for immunogenicity, which included all evaluable subjects for whom data concerning immunogenicity outcome measures were available.

End point type	Secondary
----------------	-----------

End point timeframe:

Before (Month 0) and one month after (Month 1) the booster vaccination

Notes:

[53] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint is only reporting values for the Control Group.

End point values	Control Group			
Subject group type	Reporting group			
Number of subjects analysed	119			
Units: Subjects				
Anti-PRP ≥ 0.15 $\mu\text{g/mL}$, M0 [N=111]	92			
Anti-PRP ≥ 0.15 $\mu\text{g/mL}$, M1 [N=119]	119			
Anti-PRP ≥ 1.0 $\mu\text{g/mL}$, M0 [N=111]	32			

Anti-PRP \geq 1.0 $\mu\text{g/mL}$, M1 [N=119]	118

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited symptoms: during the 4-day (Days 0–3) period after the booster vaccination. Unsolicited AEs: during the 31-day (Days 0–30) period after the booster vaccination. SAEs: during the entire study period (from Month 0 up to Month 1).

Assessment type	Systematic

Reporting groups

Reporting group title	Infanrix Hexa PF Group
-----------------------	------------------------

Reporting group description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the preservative-free (PF) formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Reporting group title	Control Group
-----------------------	---------------

Reporting group description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the licensed formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Reporting group title	Infanrix Hexa PC Group
-----------------------	------------------------

Reporting group description:

Healthy male and female subjects between, and including 16 and 20 months of age at the time of booster vaccination, who were given the preservative-containing (PC) formulation of Infanrix Hexa in the primary vaccination study 106786, additionally received a single booster dose of Infanrix Hexa vaccine, administered intramuscularly into the anterolateral quadrant of the right thigh.

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects

exposed for the reporting group. These numbers are expected to be equal.

Justification: Assessment for this event for this phase was performed solely on subjects with their symptom sheets completed.
