

## Clinical trial results:

### Open Label Randomized, Multi-centre Phase III Trial of TPF Plus Concomitant Treatment With Cisplatin and Radiotherapy Versus Concomitant Cetuximab and Radiotherapy in Locally Advanced, Unresectable Head and Neck Cancer

#### Summary

EudraCT number	2007-005540-24
Trial protocol	ES
Global end of trial date	23 December 2016

#### Results information

Result version number	v1 (current)
This version publication date	28 November 2019
First version publication date	28 November 2019

#### Trial information

##### Trial identification

Sponsor protocol code	TTCC-2007-01
-----------------------	--------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Grupo Español de Tratamiento de Tumores de Cabeza y Cuello (TTCC)
Sponsor organisation address	SEOM, Calle Velázquez, 7-3º, Madrid, Spain, 28001
Public contact	Juan Jesús Cruz, TTCC- Grupo Español de Tratamiento de Tumores de Cabeza y Cuello, jjcruz@usal.es
Scientific contact	Juan Jesús Cruz / Ricardo Hitt Sabag (rhitt@telefonica.net), TTCC- Grupo Español de Tratamiento de Tumores de Cabeza y Cuello, jjcruz@usal.es

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 July 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 July 2013
Global end of trial reached?	Yes
Global end of trial date	23 December 2016
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate that induction (TPF) chemotherapy followed by RT + Cetuximab is at least non-inferior to chemotherapy with TPF followed by RT + Cisplatin in terms of OS in patients with unresectable SCCHN.

Protection of trial subjects:

All patients were offered supportive measures for disease-related symptoms and treatment-associated toxicity. Any concomitant medication, procedures or blood products administered during the study and in the 2 weeks prior to its start were recording the CRF. The patients had to be premedicated with: antihistamines and corticosteroids before they received the first dose of cetuximab, dexamethasone before the administration of docetaxel. Palliative RT could not be administered for pain management or other non-curative purposes. Surgery to remove tumours was not permitted. The study patient was withdrawn if this surgery was carried out. If, at the end of the study, tumour persistence, relapse or progression (exit from the study) was observed, the investigator could then make a decision regarding the appropriateness or not of performing rescue and/or palliative surgery. Sedatives, antiemetics, antibiotics, analgesics, antihistamines, steroids, red blood cell concentrates, or fresh-frozen plasma or platelet transfusions could be administered to help the treatment of pain, infection or other complications of the neoplasia. In the case of documented febrile neutropenia or infection, IV antibiotics could be administered for curative purposes. Only the administration of haematopoietic growth factors was accepted. Erythropoietin was only administered in patients with a haemoglobin value below 10 g/dL and at the lowest possible dose so as to avoid a transfusion. Furthermore, the administration of erythropoietin was stopped if, after 8 weeks of treatment, the patient's haemoglobin levels did not recover to the levels necessary or if they still required transfusions. Prophylactic treatment with an antihistamine and a corticosteroid was administered before the initial dose of cetuximab was administered. Similarly, the patients had to be premedicated with corticosteroids before all the docetaxel doses.

Background therapy:

The combination of TPF induction chemotherapy followed by concomitant chemoradiotherapy with cisplatin currently appears to be the new standard treatment in unresectable cancer. However, increased acute and particularly chronic toxicity lead us to reconsider continuing a chemoradiotherapy regimen after induction chemotherapy. In particular, due to the onset of cetuximab and the finding that cetuximab has been shown to increase the efficacy of RT with a significant increase in locoregional disease control and survival in locally advanced SCCHN, without increasing the acute and/or chronic toxicity associated with RT.

Evidence for comparator: -

Actual start date of recruitment	15 July 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	36 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	Spain: 519
Worldwide total number of subjects	519
EEA total number of subjects	519

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	434
From 65 to 84 years	85
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

In total, 530 patients with locally advanced, unresectable head and neck cancer were recruited at 43 sites in Spain between 2008-2013.

### Pre-assignment

Screening details:

Prior to start date of the TPF induction chemotherapy treatment, the patients signed informed consent and were assessed for e.g. diagnosis and inclusion/exclusion criteria. Eligible patients were recruited to an induction period (ITT1). Those still eligible after this period were randomized to either of the two radical treatment arms (ITT2).

### Period 1

Period 1 title	Period 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Arm title	Induction treatment following Radical treatment
-----------	---

Arm description:

- Induction treatment (ITT1): Chemotherapy with TPF (docetaxel, cisplatin, 5-fluorouracil)
- Radical treatment (ITT2) - Group A: Cisplatin + Radiotherapy
- Radical treatment (ITT2) - Group B: Cetuximab + Radiotherapy

Arm type	Experimental
Investigational medicinal product name	TPF (docetaxel, cisplatin, 5-fluorouracil)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

The treatment was started with 3 cycles of TPF (docetaxel, cisplatin and 5-fluorouracil) every 3 weeks supported with G-CSF and ciprofloxacin (or its equivalent).

Docetaxel (75 mg/m<sup>2</sup>/d; IV 1 hour; 1 day)

Cisplatin (75 mg/m<sup>2</sup>/d; IV 1 hour; 1 day)

5-FU (750 mg/m<sup>2</sup>/d; 24-hour infusion; 1-5 day)

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

At 3-4 weeks (5 weeks at most) from the end of the 3rd TPF cycle, conventionally fractionated RT concomitant with chemotherapy was started (cisplatin 100 mg/m<sup>2</sup>). Patients received cisplatin 100 mg/m<sup>2</sup> on day 1 (IV infusion of 1 hour), coinciding with the first day of RT, and subsequently on days 22 and 43 of RT.

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

At 3-4 weeks (5 weeks at most) from the end of the 3rd TPF cycle, conventionally fractionated RT

started. Cetuximab was administered at an initial dose of 400 mg/m<sup>2</sup>/day in the first infusion for 120 minutes, followed by weekly doses of 250 mg/m<sup>2</sup>/day for 60 minutes.

<b>Number of subjects in period 1</b>	Induction treatment following Radical treatment
Started	519
Completed	407
Not completed	112
Consent withdrawn by subject	4
Physician decision	6
Adverse event, non-fatal	42
Death	15
Lost to follow-up	2
Progressive disease	23
Protocol deviation	13
Not treated	7

### Primary: Overall survival

End point title	Overall survival
End point description:	
Overall survival defined as time between the start of treatment with TPF (induction) and death due to any cause, or to the last check-up in the case of living patients.	
End point type	Primary
End point timeframe:	
Measured from induction until death or time of last check-up.	

End point values	Cisplatin+RT (Standard arm)	Cetuximab+RT (Experimental arm)		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	205	202		
Units: month				
median (confidence interval 95%)	63.6 (42.2 to 75.1)	42.9 (33.6 to 72.2)		

### Statistical analyses

Statistical analysis title	Overall survival
Statistical analysis description:	
Cox proportional hazards regression model to prove non-inferiority.	
Comparison groups	Cisplatin+RT (Standard arm) v Cetuximab+RT (Experimental arm)

Number of subjects included in analysis	407
Analysis specification	Pre-specified
Analysis type	non-inferiority
Parameter estimate	Cox proportional hazard
Point estimate	0.05
Confidence interval	
level	90 %
sides	1-sided
upper limit	1.3

### Secondary: Progression-free survival

End point title	Progression-free survival
-----------------	---------------------------

End point description:

End point type	Secondary
----------------	-----------

End point timeframe:

From start of induction treatment until the date of progression or death from any cause, whichever occurred first.

End point values	Induction treatment following Radical treatment	Cisplatin+RT (Standard arm)	Cetuximab+RT (Experimental arm)	
Subject group type	Reporting group	Subject analysis set	Subject analysis set	
Number of subjects analysed	519	205	202	
Units: months				
median (confidence interval 95%)	22.6 (17.6 to 31.1)	39.9 (26.1 to 62.8)	20.2 (15.2 to 31.1)	

### Statistical analyses

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 January 2008	This amendment reported the request for clarifications from the IECs (there was no body of the amendment as a result).
03 March 2008	This amendment reported the inclusion of 23 new sites to the study in order to achieve the objective of 398 randomised and evaluable patients for a total of 458 included. The change in Principal Investigator at Hospital Clínico Lozano Blesa in Zaragoza, and the update to the study coordinators was also notified.
02 May 2008	<ul style="list-style-type: none"><li>•The toxicity rating criteria were changed to achieve a more precise evaluation during the different study periods based on the treatment the patient was receiving, specifically during the RT and for late toxicity.</li><li>•The name of "end of study visit" was replaced by "VAP".</li><li>•The assessment schedule of the tumour for the assessment visit was modified after radical treatment (which went from 10-12 weeks post-RT to 6-8 weeks) and the schedule for post-treatment visits for better monitoring of the patient was also changed (increasing the frequency of visits and exams during the 5 years of follow-up).</li><li>•A dental assessment was added to the response assessment visit after the induction treatment.</li><li>•An assessment of weight for every week of treatment (induction and radical) was added.</li><li>•Fortnightly blood tests were added while radical treatment to better monitor the patient.</li><li>•The schedule for assessing QoL was changed (every 6 months during years 1 and 2, instead of only every 4 months for 1 year). It was also clarified that once the patient progressed, it would not be necessary to complete these questionnaires.</li><li>•Visual exams of the tumour during the assessment visits for induction treatment were removed.</li><li>•The documentation of concomitant AEs and treatment during the different study treatments was clarified. From 90 days post-radiochemotherapy treatment, only data on chronic toxicity associated with this treatment was collected, following the RTOG/EORTC late CTC.</li><li>•The study schedule was changed in accordance with the aforementioned changes.</li><li>•The inclusion of 5 new sites in the study was requested so that the sample size (458 patients) could be achieved.</li><li>•The non-participation of one of the already approved sites (Instituto Oncológico de Guipúzcoa) was reported.</li><li>•Various typing errors were corrected and the use of CSFs, and the use of colony-stimulating factors and CRF management was written more clearly, as for this study an online or e-CRF (non paper-based)</li></ul>
19 June 2008	<ul style="list-style-type: none"><li>• The Patient Information Sheet and Informed Consent Form were adapted according to the submitted and approved changes, in amendment No 3 of 2 May 2008.</li></ul> <p>After evaluation and approval of protocol amendment 3 by the IECs involved, the sponsor was requested to change the patient information sheet and informed consent form according to the changes in the proposed schedule in this amendment.</p> <p>Furthermore, according to the request from another two IECs who assessed the protocol during the evaluation of amendment 2, and in order to have a single version of the patient information sheet and informed consent form for all sites, a couple of aspects of this document were also changed.</p> <ul style="list-style-type: none"><li>• Sections of previous and concomitant medication were updated. Specifically, amifostine (Ethyol®) was included as non-permitted medication due to possible serious dermatological adverse reactions and erythropoietin was removed as a non-permitted concomitant medication as its use was part of clinical practice in many sites and it appeared erroneously.</li><li>• The dental evaluation in the evaluation visit following neoadjuvant treatment with TPF was removed, with dental assessment only at baseline.</li><li>• Various typographic errors were corrected.</li></ul>

01 September 2008	<ul style="list-style-type: none"> <li>• The change in Principal Investigator in one of the already approved sites was reported (H. Clínico de Santiago de Compostela).</li> <li>• A typographical error in the footer of the approved version of the Patient Information Sheet and Informed Consent Form (version No.3 dated 19/06/08) was reported to the IECs. This footer requested the patient's dated signature for all sheets. In order to facilitate the process for obtaining Informed Consent, the IECs were informed that the signature and date of the patient would only be requested in the Informed Consent Form, while the footer would be removed in the information sheets.</li> </ul>
30 October 2008	<ul style="list-style-type: none"> <li>• The diagnosis of epidermoid carcinoma was clarified.</li> <li>• The section on allowed concomitant medication was updated.</li> <li>• Medication prior to cetuximab infusion was updated.</li> <li>• Typing errors were corrected.</li> <li>• Statistical errors were corrected (1. The terms "equivalence/equivalent" were corrected by "non-inferior / non-inferiority" in some sections of the protocol. The term "equivalent" was not correct in this study, whose main objective was to demonstrate non-inferiority; 2. The number of patients to be included in the study was corrected according to the expected withdrawal rate (15% who progressed with TPF or were lost). The initial calculation of 458 patients to be included to obtain 398 assessable was not correct when taking this 15% into account. The re-calculation showed that 469 patients were needed to obtain 398 evaluable patients; 3. The definitions of the first and second part of the study were corrected and the definitions of the different study populations in both of these were corrected. The existence of at least one post-baseline evaluable CT scan was added in the protocol population. The population was removed for QoL analysis, since ICH guidelines did not include this type of population. Tables with the data obtained from the quality-life questionnaires used in this study were produced; 4. Some typographical errors were corrected).</li> </ul>
27 April 2009	<ul style="list-style-type: none"> <li>• Reported the inclusion of a new site (Hospital Clínico de Valencia).</li> <li>• Reported a change in Principal Investigator in the Hospital Arnau de Vilanova Hospital in Lleida.</li> <li>• Reported a change in Principal Investigator in the Hospital Universitario de Salamanca.</li> <li>• Typing errors were corrected.</li> </ul>
21 September 2009	<ul style="list-style-type: none"> <li>• The change in Principal Investigator at the Hospital La Paz.</li> <li>• The change in Principal Investigator at the Hospital Virgen de las Nieves.</li> </ul>
26 November 2009	This amendment reported the change of principal investigator in Hospital de Sagunto.
30 August 2010	<ul style="list-style-type: none"> <li>• The change in Principal Investigator at the Hospital Morales Meseguer.</li> <li>• The change of CRM in Trial Form Support.</li> </ul>
30 September 2010	This amendment reported the change of principal investigator at Hospital Clínico de Santiago.

30 April 2012	<ul style="list-style-type: none"> <li>•The change of study Sponsor and the national Coordinator contact details.</li> <li>•Change in Principal Investigator in Hospital Universitario 12 de Octubre.</li> <li>•The change in Principal Investigator in the Hospital Arnau de Vilanova in Valencia.</li> <li>•The change in inclusion criteria 9, 10, 12 and 13 (1. Number 9: it was requested to replace "haemoglobin &gt;10 g/dL" with "haemoglobin &gt;9 g/dL and no symptoms related to anaemia". 2. Number 10: it was requested to replace "bilirubin <math>\leq 1 \times</math> UNL, GOT and GPT <math>\leq 2.5</math> UNL, alkaline phosphatase <math>&lt; 5</math> UNL" with "Bilirubin <math>\leq 1.5 \times</math> UNL, and some of the following values: GOT <math>\leq 2.5</math> ULN or GPT <math>\leq 2.5</math> UNL or alkaline phosphatase <math>&lt; 2</math> UNL; however, if all of these are present, their value should not exceed the UNL". 3. Number 12: it was requested to remove the inclusion criterion no. 12 blood calcium <math>\leq 1.25 \times</math> UNL. 4. Number 13: replacing "Suitable nutritional status: weight loss <math>&lt; 20\%</math> compared to theoretical weight and albumin <math>\geq 35</math> g/L" with "Adequate nutritional status: BMI <math>&gt; 18.5\%</math> or albumin <math>\geq 30</math> g/L").</li> <li>•Modification to the induction treatment.</li> <li>•Change in the duration of the trial and the number of sites.</li> <li>•Change in the Tumour Assessment Imaging Techniques and the periods when it is carried out.</li> <li>• The change in the non-therapeutic visit regimen during neoadjuvant treatment.</li> </ul>
04 October 2012	The change in Principal Investigator at Hospital Lucus Augusti was requested via this amendment.
13 October 2014	<p>This amendment requested:</p> <ul style="list-style-type: none"> <li>• A change in Principal Investigator at Hospital de Sagunto.</li> <li>• A change in Principal Investigator at the Hospital Central de Asturias.</li> </ul>
22 January 2015	This amendment reported the performance of a genetic sub-study to gain an in-depth knowledge of the genetic mechanisms of epidermoid head and neck cancer by identifying mutations in tumour tissue, in order to define prognostic subtypes and molecular predictive factors of response that allow the best therapeutic strategy to be established for each patient. In order to be able to investigate these molecular characteristics in the TTCC-2007-01 trial, in this additional protocol (GEN-TTCC-2007-01 Project), the baseline tumour samples were requested from the subjects included in the study. The DNA from the tumour samples was obtained with prior consent of the subjects included in the study, and were stored at the Centro de Investigación del Cáncer de Salamanca-IBSAL for analysis and research into genes in association with this trial.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
