

Clinical trial results:

A double-blind randomised multi-centre, placebo-controlled trial of combined ACE-inhibitor and beta-blocker therapy in preventing the development of cardiomyopathy in genetically characterised males with DMD without echo-detectable left ventricular dysfunction

Summary

EudraCT number	2007-005932-10
Trial protocol	GB
Global end of trial date	23 March 2018

Results information

Result version number	v1 (current)
This version publication date	02 December 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 March 2018
Global end of trial reached?	Yes
Global end of trial date	23 March 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine whether the introduction of ACE-inhibitor (perindopril) combined with beta-blocker therapy (bisoprolol), before the onset of echo-detectable left ventricular dysfunction, can delay the age of onset and/or slow the rate of progression of cardiomyopathy in males with DMD.

Protection of trial subjects:

None

Background therapy:

None

Evidence for comparator:

Placebo control was chosen in order to maintain power and a simple trial design; hence, the benefits of combination therapy (ACE-inhibitor and beta-blocker) against placebo were evaluated in a two-arm trial.

Actual start date of recruitment	26 May 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 85
Worldwide total number of subjects	85
EEA total number of subjects	85

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	74
Adolescents (12-17 years)	11
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

The recruitment period ran from 25 May 2011 to 22 January 2015, at five NHS hospital sites in the United Kingdom. Sites were in Newcastle upon Tyne, London, Liverpool, Birmingham and Oxford.

Pre-assignment

Screening details:

Site trial staff screened DMD patients who currently attend neurology or equivalent clinics for supervision of their symptoms, or have regular schedules for cardiac surveillance, for potential participants. Screening logs were kept at each site, recording patient details, satisfaction of eligibility criteria, and reasons for exclusion.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Assessor, Subject

Blinding implementation details:

Trial IMP tablets were over-encapsulated, and accompanied by matched placebo, to establish the blind from trial start, in bottles numbered according to the blinded randomisation schedule. Sealed codebreak envelopes were stored in the Pharmacy/ISF, and opened only in an emergency. Unblinding was notified to the trial co-ordinating team, and a record kept in the TMF and ISF. The blind was maintained until all trial data were collected and the database locked, when participants were unblinded.

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment

Arm description:

Combined capsule containing 2 mg perindopril and 1.25 mg bisoprolol

Arm type	Experimental
Investigational medicinal product name	Bisoprolol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Boys up to 30 kg body weight at baseline - Months 2-60 (or study end date or until their bodyweight increases to 30 kg or over): one capsule per day, containing 1.25 mg bisoprolol 1.25 mg

Boys 30 kg or over body weight at baseline - Months 2-60 (or study end date): Change to maintenance dosage of two capsules per day, containing 2.5 mg bisoprolol

Boys up to 30 kg body weight at baseline but whose body weight increases to 30 kg or over during the trial – From follow-up appointment where weight increased to 30 kg or over to month 60 (or study end date): Change to maintenance dosage of two capsules per day, containing 2.5 mg bisoprolol

Investigational medicinal product name	Perindopril
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Boys up to 30 kg body weight at baseline - Months 2-60 (or study end date or until their bodyweight increases to 30 kg or over): Combined capsule containing 2 mg perindopril

Boys 30 kg or over body weight at baseline - Months 2-60 (or study end date): Change to maintenance dosage of two capsules containing 4 mg perindopril

Boys up to 30 kg body weight at baseline but whose body weight increases to 30 kg or over during the trial – From follow-up appointment where weight increased to 30 kg or over to month 60 (or study end date): Change to maintenance dosage of two capsules containing 4 mg perindopril

Arm title	Placebo
Arm description: Matching placebo	
Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Boys up to 30 kg body weight at baseline - Months 2-60 (or study end date or until their bodyweight increases to 30 kg or over): Capsule containing matched placebo

Boys 30 kg or over body weight at baseline - Months 2-60 (or study end date): Change to maintenance dosage of two capsules of matched placebo

Boys up to 30 kg body weight at baseline but whose body weight increases to 30 kg or over during the trial – From follow-up appointment where weight increased to 30 kg or over to month 60 (or study end date): Change to maintenance dosage of two capsules of matched placebo

Number of subjects in period 1	Treatment	Placebo
Started	42	43
Completed	42	43

Period 2

Period 2 title	36 months' participation
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Assessor

Blinding implementation details:

Trial IMP tablets were over-encapsulated, and accompanied by matched placebo, to establish the blind from trial start, in bottles numbered according to the blinded randomisation schedule. Sealed codebreak envelopes were stored in the Pharmacy/ISF, and opened only in an emergency. Unblinding was notified to the trial co-ordinating team, and a record kept in the TMF and ISF. The blind was maintained until all trial data were collected and the database locked, when participants were unblinded.

Primary: 36 months' participation

End point title	36 months' participation
End point description:	
End point description:	
The primary outcome measure was change in left ventricular ejection fraction (LVEF %), compared to baseline after a minimum of three years of combination therapy or placebo. To assess the robustness of ejection fraction result, similar comparisons will be made for parameters of left ventricular end-systolic dimension, wall motion index and left ventricular fractional shortening (%) and mitral flow to left ventricular tissue Doppler ratios (E/E' ratios).	
End point type	Primary
End point timeframe:	
36 months post-randomisation.

Method	ANOVA

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All non-SAEs/SARs occurring during drug treatment were reported on the eCRF system within four weeks of the form being due.

Adverse event reporting additional description:

All Adverse Events were recorded. PIs were responsible for managing all AEs/ARs according to local protocols.

Assessment type	Systematic

occurrences (all)	84	120	
Tight achilles tendon			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Knee pain			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Leg pain			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Infections and infestations			
Flu			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Oral thrush			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Pneumonia			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Throat infection			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Toe infection			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Chest infection			

subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Infection			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Ingrowing nail			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	
Tonsillitis			
subjects affected / exposed	29 / 42 (69.05%)	34 / 43 (79.07%)	
occurrences (all)	84	120	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 March 2010	Personnel changes (Addition of Assistant Trial Manager).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
