

## Clinical trial results:

**STI571 Prospective International Randomised Trial 2 - A phase III, prospective randomised comparison of imatinib (STI571, Glivec/Gleevec) 400mg daily versus dasatinib (Sprycel) 100mg daily in patients with newly-diagnosed chronic phase chronic myeloid leukaemia.**

### Summary

EudraCT number	2007-006185-15
Trial protocol	GB
Global end of trial date	07 March 2018

### Results information

Result version number	v1 (current)
This version publication date	08 June 2019
First version publication date	08 June 2019

### Trial information

#### Trial identification

Sponsor protocol code	SPIRIT 2
-----------------------	----------

#### Additional study identifiers

ISRCTN number	ISRCTN54923521
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	21 May 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 March 2018
Global end of trial reached?	Yes
Global end of trial date	07 March 2018
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

To compare 5-year Event Free Survival (EFS) between the two treatment arms. The study is powered to demonstrate superiority of the dasatinib arm over the imatinib arm.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

none

Evidence for comparator: -

Actual start date of recruitment	07 August 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

**Population of trial subjects**

---

**Subjects enrolled per country**

Country: Number of subjects enrolled	United Kingdom: 814
Worldwide total number of subjects	814
EEA total number of subjects	814

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	618
From 65 to 84 years	189
85 years and over	7

## Subject disposition

### Recruitment

Recruitment details:

Patients were recruited from haematology clinics in UK hospitals from August 2007 until end of February 2013. Eligible patients were screened by haematology consultants and then written informed consent obtained.

### Pre-assignment

Screening details:

Patients had blood tests (haematology and biochemistry), a bone marrow sample (aspirate and trephine) taken and a physical examination performed. Medical history and details of any concomitant diseases and any treatment given post diagnosis was noted. If patient met inclusion criteria and none of the exclusion criteria, they were then randomised.

### Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm A

Arm description:

Imatinib 400mg per day

Arm type	Active comparator
Investigational medicinal product name	Imatinib
Investigational medicinal product code	
Other name	Glivec
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One 400mg tablet to be taken orally each day with water.

<b>Arm title</b>	Arm B
------------------	-------

Arm description:

Dasatinib 100mg daily

Arm type	Experimental
Investigational medicinal product name	Dasatinib
Investigational medicinal product code	
Other name	Sprycel
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

One 100mg tablet to be taken once a day, orally, with water.

<b>Number of subjects in period 1<sup>[1]</sup></b>	Arm A	Arm B
Started	406	406
Completed	194	230
Not completed	212	176
Consent withdrawn by subject	2	1
Adverse event, non-fatal	68	123
Pregnancy	2	4
Patient did not want to continue first line drug	8	8
patient developed another concomitant condition	4	-
joined another clinical trial	-	1
developed a concomitant condition	-	8
Lost to follow-up	4	3
Lack of efficacy	49	20
Inadequate PCR response/loss of PCR response	67	6
patient joined another clinical trial	7	-
Protocol deviation	1	2

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Only 812 (406 in each arm), out of 814 recruited, received treatment. So all study results are based on FAS/SAF analysis population, which consists actually on 812 total patients.

## Baseline characteristics

### Reporting groups

### Subject analysis sets

Subject analysis set title	FAS
Subject analysis set type	Full analysis

Subject analysis set description:

The FAS is defined as all randomised patients who received study medication at least once. Patients will be analysed according to the treatment group to which they were randomised, rather than by the actual treatment they were administered. The FAS is the primary population of interest for all efficacy analyses.

Subject analysis set title	Safety Set
Subject analysis set type	Safety analysis

Subject analysis set description:

All patients who are randomised into the study and who received study medication at least once will be considered evaluable for the Safety Set. This is the same definition as the FAS. However, in the event that a patient receives study medication other than that to which they have been randomised, analyses based on the Safety Set will be performed using the actual treatment group that was administered and so will be different to the FAS. All safety tables will be based on the Safety Set.

Reporting group values	FAS	Safety Set

## Statistical analyses

<b>Statistical analysis title</b>	Event-Free Survival Kaplan-Meier Analysis
-----------------------------------	---

Statistical analysis description:

An event includes: death (any cause), disease progression, loss of CHR, increase in WBC count, or loss of MCR. See protocol for full details.

Event-free survival is calculated as (Date of event - Date of first dose of study medication)/30.4.

Patients who have not experienced an event within 5 years are censored at the earliest of (date of last visit, or the date of first dose of study medication + 1826.25 days).

Comparison groups	Arm B v Arm A
Number of subjects included in analysis	812
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.318
Method	Logrank

<b>Statistical analysis title</b>	Event-Free Survival Cox Proportional Hazard Model
-----------------------------------	---

Statistical analysis description:

An event includes: death (any cause), disease progression, loss of CHR, increase in WBC count, or loss of MCR. See protocol for full details.

Event-free survival is calculated as (Date of event - Date of first dose of study medication)/30.4.

Patients who have not experienced an event within 5 years are censored at the earliest of (Date of last visit, or the date of first dose of study medication + 1826.25 days).

Comparison groups	Arm B v Arm A
Number of subjects included in analysis	812

Parameter estimate	Hazard ratio (HR)
Point estimate	0.797
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.51
upper limit	1.245

Notes:

[1] - Analysis is based on a Cox proportional hazards model with treatment group included as an explanatory variable.

<b>Statistical analysis title</b>	Sensitivity Analysis
-----------------------------------	----------------------

**Statistical analysis description:**

Event-Free Survival Cox Proportional Hazards Model (Sensitivity Analysis)

An event includes: death (any cause), disease progression, loss of CHR, increase in WBC count, or loss of MCR. See protocol for full details.

Event-free survival is calculated as (Date of event - Date of first dose of study medication)/30.4.

Patients who have not experienced an event within 5 years are censored at the earliest of (Date of last visit, or the date of first dose of study medication + 1826.25 days).

Comparison groups	Arm B v Arm A
Number of subjects included in analysis	812
Analysis specification	Pre-specified
Analysis type	superiority <sup>[2]</sup>
P-value	= 0.216
Method	Regression, Cox
Parameter estimate	Cox proportional hazard
Point estimate	0.75
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.476
upper limit	1.183

**Notes:**

[2] - Analysis is based on a Cox proportional hazards model with treatment group, gender, BCR-ABL transcript, dose received in first 3 months (<90% or =90%) included as explanatory variables.

**Secondary: Rate of complete cytogenetic response**

End point title	Rate of complete cytogenetic response
End point description:	
The proportion of patients achieving CCR according to the G banding .	
For G-banding: CCR is defined as 0% Philadelphia chromosome positive metaphases in bone marrow cells.	
Data is presented as observed and worst case data where worst case presumes patients with missing cytogenetic responses are non-responders. Worst case data is presented as attachment.	
End point type	Secondary
End point timeframe:	
24 months

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Occurring after starting study drug and up to 30 days after last dose

Adverse event reporting additional description:

Adverse events (AEs) collected by physician, reported by patient or from laboratory tests. AEs were defined as any undesirable sign, symptom or medical condition whether considered study drug-related or not. If present before starting study drug, they are only considered AEs if they worsen after starting study drug.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 June 2016	The protocol was updated as regarding guidance on management of pleural effusions and the addition of concerns around pulmonary arterial hypertension. The requirement for bone marrow trephine was removed. For laboratory evaluations, LDH was changed to optional, lymphocyte count added and only one test for either AST or ALT was made acceptable. The definition of serious adverse events was updated to include new malignancies and CML disease progression. The section on study drug dose escalation was updated. Drug storage conditions and contraindications were updated to reflect the SmPC. Amendments also allowed GCSF to be given as a concomitant medication and advice regarding QT prolongation with TKIs was updated. The contact details for trials team, sponsor and central laboratory were updated.
12 December 2016	The protocol was updated to allow the use of generic imatinib, to remove the requirement for bone marrow aspirate samples, to correct SAE definitions and other typographical errors and inconsistencies.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The additional endpoint of broad comparative costs between the regimens as described in the protocol, was not analysed at the end of study as there was no beneficial reason to do so when imatinib became generic in Dec 2016 at vastly reduced cost.

Notes:
