Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 November 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 November 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This was a Avonex (interferon beta-1a) controlled dose finding study to evaluate the efficacy as measured by brain MRI lesions, and safety of 2 dose regimens of ocrelizumab in participants with relapsing remitting multiple sclerosis (RRMS).

Protection of trial subjects:

All study participants were required to read and sign an informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 July 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	84 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Bulgaria: 11
Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Czechia: 14
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Russian Federation: 17
Country: Number of subjects enrolled	Romania: 4
Country: Number of subjects enrolled	Serbia: 34
Country: Number of subjects enrolled	Slovakia: 14
Country: Number of subjects enrolled	Ukraine: 26
Country: Number of subjects enrolled	United States: 47

Worldwide total number of subjects	218
EEA total number of subjects	72

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	218
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 220 participants were randomized, of which 218 received study treatment. Participants took part in the study at 79 investigative sites across 18 countries from July 17, 2008, to November 08, 2023.

Pre-assignment

Screening details:

The study consisted of a 96-week Treatment Period (TP) followed by a Treatment-free period (TFP). Participants who completed both TP & TFP (at least Week 120) were invited to participate in the optional Open-label Extension (OLE) period.

Period 1

Period 1 title	Treatment Period (TP)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Avonex/Ocrelizumab 600 mg (Active Comparator) group was open-label.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo / Ocrelizumab 600 mg

Arm description:

In the Treatment Period, participants received placebo as intravenous (IV) infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 milligrams (mg), IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, once every 24 weeks (Q24W).

Arm type	Experimental
Investigational medicinal product name	Ocrelizumab 600 mg
Investigational medicinal product code	RO4964913
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ocrelizumab was administered 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by, 600 mg, IV, on Day 1 of Cycle 2 and 600 mg, IV, on Day 1 of Cycles 3 and 4.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo was administered on Day 1, and Day 15 in Cycle 1 (1 Cycle = 168 days)

Arm title	Ocrelizumab 600 mg / Ocrelizumab 600 mg
-----------	---

Arm description:

In the Treatment Period, participants received ocrelizumab 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 600 mg, IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4.

Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Arm type	Experimental
Investigational medicinal product name	Ocrelizumab 600 mg
Investigational medicinal product code	RO4964913
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ocrelizumab was administered 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by, 600 mg, IV, on Day 1 of Cycle 2 and 600 mg, IV, on Day 1 of Cycles 3 and 4.

Arm title	Ocrelizumab 1000 mg / Ocrelizumab 600 mg
------------------	--

Arm description:

In the Treatment Period, participants received ocrelizumab 1000 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 1000 mg IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 1000 mg, IV, on Day 1 of Cycle 3 and ocrelizumab, 600 mg, IV, on Day 1 of Cycle 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Arm type	Experimental
Investigational medicinal product name	Ocrelizumab 600 mg
Investigational medicinal product code	RO4964913
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ocrelizumab was administered 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by, 600 mg, IV, on Day 1 of Cycle 2 and 600 mg, IV, on Day 1 of Cycles 3 and 4.

Investigational medicinal product name	Ocrelizumab 1000 mg
Investigational medicinal product code	RO4964913
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ocrelizumab was administered 1000 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by, 1000 mg, IV, on Day 1 of Cycle 2 and placebo IV on Day 15 of Cycle 2 followed by ocrelizumab, 1000 mg, IV, on Day 1 of Cycles 3 and 4.

Arm title	Avonex / Ocrelizumab 600 mg
------------------	-----------------------------

Arm description:

In the Treatment Period, participants received Avonex 30 micrograms (mcg) as intramuscular (IM) injection once every week of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Arm type	Active comparator
Investigational medicinal product name	Ocrelizumab 600 mg
Investigational medicinal product code	RO4964913
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Ocrelizumab administered 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by, 600 mg, IV, on Day 1 of Cycle 2 and 600 mg, IV, on Day 1 of Cycles 3 and 4.

Investigational medicinal product name	Avonex
Investigational medicinal product code	
Other name	Interferon beta-1a
Pharmaceutical forms	Powder and solvent for concentrate for solution for infusion
Routes of administration	Intramuscular use

Dosage and administration details:

Avonex was administered 30 mcg as IM injection every week of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2 and 600 mg, IV, on Day 1 of Cycles 3 and 4.

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Participants who have completed both the Treatment Period and the Treatment-Free Period will be invited to participate in the OLE. Participants will be re-consented for participation and enter the OLE screening period where they will undergo an evaluation for continued eligibility. Participants who are not eligible, or choose not to enter the OLE will complete the trial after their B-cells have repleted.

Baseline characteristics

Reporting groups

Reporting group title	Placebo / Ocrelizumab 600 mg
-----------------------	------------------------------

Reporting group description:

In the Treatment Period, participants received placebo as intravenous (IV) infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 milligrams (mg), IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, once every 24 weeks (Q24W).

Reporting group title	Ocrelizumab 600 mg / Ocrelizumab 600 mg
-----------------------	---

Reporting group description:

In the Treatment Period, participants received ocrelizumab 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 600 mg, IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Reporting group title	Ocrelizumab 1000 mg / Ocrelizumab 600 mg
-----------------------	--

Reporting group description:

In the Treatment Period, participants received ocrelizumab 1000 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 1000 mg IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 1000 mg, IV, on Day 1 of Cycle 3 and ocrelizumab, 600 mg, IV, on Day 1 of Cycle 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Reporting group title	Avonex / Ocrelizumab 600 mg
-----------------------	-----------------------------

Reporting group description:

In the Treatment Period, participants received Avonex 30 micrograms (mcg) as intramuscular (IM) injection once every week of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Reporting group title	Placebo / Ocrelizumab 600 mg
-----------------------	------------------------------

Reporting group description:

In the Treatment Period, participants received placebo as intravenous (IV) infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 milligrams (mg), IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, once every 24 weeks (Q24W).

Reporting group title	Ocrelizumab 600 mg / Ocrelizumab 600 mg
-----------------------	---

Reporting group description:

In the Treatment Period, participants received ocrelizumab 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 600 mg, IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Reporting group title	Ocrelizumab 1000 mg / Ocrelizumab 600 mg
-----------------------	--

Reporting group description:

In the Treatment Period, participants received ocrelizumab 1000 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 1000 mg IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 1000 mg, IV, on Day 1 of Cycle 3 and ocrelizumab, 600 mg, IV, on Day 1 of Cycle 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Reporting group title	Avonex / Ocrelizumab 600 mg
-----------------------	-----------------------------

Reporting group description:

In the Treatment Period, participants received Avonex 30 micrograms (mcg) as intramuscular (IM) injection once every week of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600 mg, Q24W.

Primary: Total Number of Gadolinium-Enhancing T1 Lesions Observed on Magnetic R4esonance Imaging (MRI) Scans of the Brain

End point title	Total Number of Gadolinium-Enhancing T1 Lesions Observed on Magnetic R4esonance Imaging (MRI) Scans of the Brain
-----------------	--

End point description:

Mean of total number of gadolinium-enhancing T1 lesions observed on MRI scans of the brain at Weeks 12, 16, 20, 24 was determined using average imputation method. The intent-to-treat population includes all randomized participants who had received any study drug. Here, number analysed signifies the participants who were evaluable for the outcome.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to 787 Weeks

Adverse event reporting additional description:

The safety population included all participants who received any study drug and underwent at least one assessment of safety. As per planned analysis adverse events from both the TP and TFP were combined and reported.

Assessment type	Systematic

Reporting groups

Reporting group title	Placebo/Ocrelizumab 600mg
-----------------------	---------------------------

Reporting group description:

In the Treatment Period, participants received placebo as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600mg, Q24W.

Reporting group title	Ocrelizumab 600mg/Ocrelizumab 600mg
-----------------------	-------------------------------------

Reporting group description:

In the Treatment Period, participants received ocrelizumab 300 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 600 mg, IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600mg, Q24W

Reporting group title	Ocrelizumab 600 mg Open Label Extension (OLE)
-----------------------	---

Reporting group description:

Participants who opted to enroll in the OLE received two IV infusions of ocrelizumab, 300mg on Days 1 and 15 of Cycle 5, followed by a single infusion of ocrelizumab, 600mg, once Q24W

Reporting group title	Avonex/Ocrelizumab 600 mg
-----------------------	---------------------------

Reporting group description:

In the Treatment Period, participants received Avonex 30 mcg as IM injection once every week of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 300 mg, IV, on Days 1 and 15 of Cycle 2. Participants then received ocrelizumab, 600 mg, IV, on Day 1 of Cycles 3 and 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600mg, Q24W.

-----------------------	--------------------------------------

Reporting group description:

In the Treatment Period, participants received ocrelizumab 1000 mg as IV infusion on Days 1 and 15 of Cycle 1 (1 Cycle = 168 days), followed by ocrelizumab, 1000 mg IV, on Day 1 and placebo IV on Day 15 of Cycle 2. Participants then received ocrelizumab, 1000 mg, IV, on Day 1 of Cycle 3 and ocrelizumab, 600 mg, IV, on Day 1 of Cycle 4. Participants who completed the TP then entered the TFP which was of variable duration. Participants who completed the TP and the TFP (at least through Week 120) and opted to enroll in the OLE period received ocrelizumab, 300mg, IV, on Days 1 and 15 of Cycle 5 followed by a single infusion of ocrelizumab, 600mg, Q24W.

Serious adverse events	Placebo/Ocrelizumab 600mg	Ocrelizumab 600mg/Ocrelizumab 600mg	Ocrelizumab 600 mg Open Label Extension (OLE)
Total subjects affected by serious adverse events			
subjects affected / exposed	11 / 54 (20.37%)	17 / 55 (30.91%)	28 / 103 (27.18%)
number of deaths (all causes)	3	1	6
number of deaths resulting from adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 June 2008	<p>The following changes were made as per amendment B:</p> <ul style="list-style-type: none">•Collection of persisting gadolinium-enhancing T1 lesions was added.•The transition to Cycle 2 for participants enrolled into Group D was clarified.•An exclusion criterion relating to potential hypersensitivity as a result of human serum albumin contained in the Avonex vials was added.•A risk-benefit reassessment/stopping rule was added.•Consistency was provided in the Expanded Disability Status Scale (EDSS) increase for assessment of disability progression within the protocol.•The difference between treatment withdrawal and study withdrawal was clarified.•The window for study Magnetic Resonance Imaging (MRI) scans was clarified; it was also clarified that the sites would not receive reports from the central MRI reading center.•The requirement of blood samples in order to have baseline values for participants in Group D prior to first Ocrelizumab (OCR) dose was added.•The assessment of protocol-defined relapses was clarified.•A standardized questionnaire for the telephone interview was provided.•The frequency of John Cunningham Virus (JCV) plasma sampling was increased.•Procedures for sample analysis for suspected progressive multifocal leukoencephalopathy (PML) were provided.•An exploratory investigation of patient-reported outcome (PRO) scales for potential implementation in Phase III was added.•Retreatment criteria were provided.•The requirement for clinical evaluations prior to re-dosing with OCR was clarified.•Reporting of clinical relapses and secondary progressive Multiple Sclerosis (MS) as Adverse Events (AEs) was included.•Consistent terminology for the grading of infusion reaction intensity was provided.
15 October 2011	<p>The following changes were made as per amendment C: the addition of an Open Label Extension (OLE) period of the study following the Treatment free period (TFP).</p>
03 April 2012	<p>The following changes were made as per Amendment D: the window for the Week 144 visit to allow participants the opportunity to enter the OLE following the TFP was increased from 24 weeks to 96 weeks.</p>
22 December 2015	<p>The following changes as per amendment E</p> <ul style="list-style-type: none">•The duration of OLE period was extended for the participants having completed their 4 years of open-label ocrelizumab treatment.•The permittance of alternative MS treatments and prolongation of the monitoring period for participants switching to other MS therapies post-ocrelizumab was clarified.•Voluntary collection of pregnancy outcomes and infant health information on the first year of life was added.•The telephone interview script was updated to clarify the purpose of the telephone interview.•The activities of the independent Data Monitoring Committee (iDMC) for the OLE period were clarified.•Minor changes and clarifications were made to the schedule of assessments for the OLE period of the study to improve consistency
04 August 2016	<p>The following changes were made as per amendment F:</p> <ul style="list-style-type: none">•The version of ocrelizumab that would be administered across the program was changed such that each vial contains 300 mg ocrelizumab. Updated guidance on the storage of infusion bags and a requirement on the use of an infusion set with an infusion set with an in-line filter was added.•The safety section was updated to align the safety language with the Investigator's Brochure, reflecting the outcome from the Phase III clinical studies.

01 February 2017	The following change was made as per amendment G: OLE period of the study was extended to provide participants with the opportunity to continue receiving benefit from ocrelizumab treatment based on positive Phase III relapse multiple sclerosis (RMS) data.
27 September 2017	<p>The following changes were made as per amendment H: •The protocol safety wording was updated for the following risks associated with ocrelizumab treatment: infusion-related reaction (IRR) risk, infection risk, delayed return of peripheral B cells, decrease in immunoglobulins, malignancy including breast cancer risk, progressive multifocal leukoencephalopathy (PML), including the guidance for PML diagnosis, neutropenia, serious infections related to decrease in immunoglobulins, hypersensitivity reactions, and impaired response to immunization. The following risks associated with ocrelizumab treatment have been removed after the latest benefit–risk assessments: cardiovascular disorders and immunogenicity.</p> <ul style="list-style-type: none"> •Adverse Events of Special Interest (AESIs) were required to be reported by the Investigator to the Sponsor immediately (i.e., no more than 24 hours after learning of the event). •With antihistamines considered as part of the pretreatment regimen, the risks associated with antihistamine use were added (Warnings and Precautions). •Contraception requirements for male participants and female partner pregnancy reporting were removed. •Contraception requirements, duration of contraception, and procedures for pregnant women during OLE period were updated.
15 August 2018	<p>The following changes were made as per amendment I: •The OLE treatment period was extended to 31 December 2020 to provide additional long-term efficacy and safety data.</p> <ul style="list-style-type: none"> •Language was updated pertaining to impairment of vaccination response. •Retreatment with ocrelizumab for participants with active tuberculosis and for pregnant or breastfeeding female participants was clarified. •Information regarding exposure in utero to ocrelizumab and administration of live or live-attenuated vaccines to neonates and infants were added. •Language related specially to Case Report Forms (CRFs) was deleted to allow for conversion to electronic capture.
09 February 2020	<p>The following changes were made as per amendment J:</p> <ul style="list-style-type: none"> •For the first participant entering OLE period, the maximum duration was modified to 11 years. •The safety risks for ocrelizumab were updated. •The pharmacokinetic/anti-drug antibody (ADA) collection/analysis was removed because immunogenicity incidence with ocrelizumab is very low (<1%) with no safety risks identified, so continuous monitoring in this population is unnecessary. •The plasma and urine sample collection for John Cunningham virus (JCV) was removed because there is no evidence that JCV antibody index (or similar) informs the risk of PML for participants on ocrelizumab. •Guidance for diagnosis of PML was updated. •Guidance for reporting abortions was updated. •Reference to Medical Monitor was changed where applicable and the emergency contact information was updated.
31 July 2020	The following change was made as per amendment K: The option of a shorter study drug infusion regimen was added to reduce burden on participants and infusion centers during the OLE period.
17 November 2021	<p>The following changes were made as per amendment L: •The benefit-risk assessment for concomitant use of SARS-CoV-2 vaccines was updated.</p> <ul style="list-style-type: none"> •Language was added to clarify that participants who complete or who discontinue the OLE period treatment early, for any reason, would be followed up for a maximum of 48 weeks after the last infusion of ocrelizumab. Continued B-cell monitoring for participants whose B cells are not repleted (i.e., returned to baseline levels or the lower limit of normal, whichever is lower) was removed because no increased safety risk was identified in the ocrelizumab clinical development program following cessation of treatment. •Language was added to clarify that participants who switch to commercial ocrelizumab after entering B-cell monitoring or enter into treatment with another Disease modifying therapy (DMT) would be discontinued from B-cell monitoring and from the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
