

## Clinical trial results:

### A Multi-center, Open-label Study of the Human AntiTNF Monoclonal Antibody Adalimumab to Evaluate the Efficacy and the Long-term Safety and Tolerability of Repeated Administration of Adalimumab in Pediatric Subjects with Crohn's Disease Who Have Demonstrated a Clinical Response in the M06-806 Study

#### Summary

EudraCT number	2007-006494-90
Trial protocol	BE CZ GB Outside EU/EEA
Global end of trial date	04 April 2017

#### Results information

Result version number	v1 (current)
This version publication date	14 October 2017
First version publication date	14 October 2017

#### Trial information

##### Trial identification

Sponsor protocol code	M06-807
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00686374
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	AbbVie
Sponsor organisation address	1 North Waukegan Road, North Chicago, IL, United States, 60064
Public contact	Global Medical Services, AbbVie, 001 800-633-9110,
Scientific contact	Andreas Lazar, AbbVie, andreas.lazar@abbvie.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 April 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 April 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the long-term maintenance of clinical response, safety and tolerability of repeated administration of adalimumab in pediatric subjects with Crohn's disease who participated in, and successfully completed, Protocol M06-806 through Week 52 and who met all the inclusion and none of the exclusion criteria of Protocol M06-807.

Protection of trial subjects:

Prior to any study-related screening procedures being performed, the investigator or his/her representative explained the nature of the study to the parent or guardian of the pediatric subject and answered all questions regarding the study. Subjects were included in all discussions. The informed consent form was reviewed, signed, and dated by the subject's parent or legal guardian, and by the person who administered the informed consent. If a subject became of legal age in the state of residence during the course of the study, another informed consent was to be obtained at that time. Additionally, in keeping with each institution's Institutional Review Board requirements, an informed assent was also to be obtained from the subject, as required. Subjects were to be included in all discussions in order to obtain their signature on an assent form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 February 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 19
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Belgium: 11
Country: Number of subjects enrolled	Czech Republic: 8
Country: Number of subjects enrolled	United States: 47
Country: Number of subjects enrolled	Canada: 14
Worldwide total number of subjects	100
EEA total number of subjects	39

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	20
Adolescents (12-17 years)	80
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Subjects enrolled in and completed Study M06-806 through Week 52 who were responders at any time point during Study M06-806 (defined as having achieved at least a 15-point reduction in Pediatric Crohn's Disease Activity Index from Baseline).

### Pre-assignment

Screening details:

36 subjects discontinued study drug when adalimumab became commercially available (received regulatory approval for pediatric Crohn's disease) in their country. These subjects were considered to have completed the study, and are included as study completers in the subject disposition.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Any adalimumab
-----------	----------------

Arm description:

Adalimumab was administered via subcutaneous injection. Dosage was based on body weight and clinical status, and ranged from 10, 20, or 40 mg every other week to 20 or 40 mg every week.

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	ABT-D2E7, Humira
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects who enrolled into the study from blinded therapy in Protocol M06-806 received open-label (OL) therapy at a dose dependent on their body weight. Subjects who weighed  $\geq 40$  kg received 40 mg of adalimumab every other week (eow), while those who weighed  $< 40$  kg received 20 mg of adalimumab eow. Beginning with Week 8, subjects who had a disease flare may have been switched to every week (ew) treatment at the same dose of adalimumab received while on eow treatment. Subjects who enrolled into the study from OL therapy in Protocol M06-806 continued to receive the same dose they were receiving (i.e., 40 mg ew or 20 mg ew) at the Week 52 visit of Protocol M06-806. Adalimumab dose could have been decreased to the next lower treatment level for those with body weight changes. Subjects who responded to treatment may have also had their dosage frequency decreased from ew to eow dosing, as well as a decrease in dosage.

Number of subjects in period 1	Any adalimumab
Started	100
Completed	39
Not completed	61
Consent withdrawn by subject	5
Adverse event, non-fatal	8
Other, not specified	4

Lost to follow-up	1
Missing reason	33
Lack of efficacy	10

## Baseline characteristics

### Reporting groups

Reporting group title	Any adalimumab
-----------------------	----------------

Reporting group description:

Adalimumab was administered via subcutaneous injection. Dosage was based on body weight and clinical status, and ranged from 10, 20, or 40 mg every other week to 20 or 40 mg every week.

Reporting group values	Any adalimumab	Total	
Number of subjects	100	100	
Age categorical			
Age at Protocol M06-806 Baseline			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	20	20	
Adolescents (12-17 years)	80	80	
Adults (18-64 years)	0	0	
From 65-84 years	0	0	
85 years and over	0	0

Body weight at Protocol M06-806 Baseline			
Units: Subjects			
< 40 kg	38	38	
≥ 40 kg	62	62	

## End points

### End points reporting groups

Reporting group title	Any adalimumab
Reporting group description:	
Adalimumab was administered via subcutaneous injection. Dosage was based on body weight and clinical status, and ranged from 10, 20, or 40 mg every other week to 20 or 40 mg every week.	

### Primary: Number of subjects who achieved Pediatric Crohn's Disease Activity Index (PCDAI) clinical remission over time

End point title	Number of subjects who achieved Pediatric Crohn's Disease Activity Index (PCDAI) clinical remission over time <sup>[1]</sup>
End point description:	
Pediatric Crohn's Disease Activity Index (PCDAI) is an index used to measure disease activity of pediatric patients with Crohn's disease assessing abdominal pain, stool frequency, patient functioning, hematocrit, erythrocyte sedimentation rate, albumin, weight, height, abdomen, perirectal disease, and extraintestinal manifestations. It ranges from 0 to 100; higher scores indicate more active disease. Clinical remission was defined as PCDAI ≤ 10.	
End point type	Primary
End point timeframe:	
Week 0, 4, 8, 12, 24, 36, 48, 60, 72, 84, 96, 108, 120, 144, 168, 192, 216, 240, 264, 288, 312, 336, 360, 384, 408	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics are presented, per protocol.

Week 408 (n=0)	0			

Notes:

[2] - ITT population: subjects who rcvd  $\geq 1$  dose of adalimumab and had  $\geq 1$  non-missing efficacy measurement

## Statistical analyses

No statistical analyses for this end point

### Primary: Number of subjects with clinical response as defined by Pediatric Crohn's Disease Activity Index (PCDAI) score over time

End point title	Number of subjects with clinical response as defined by Pediatric Crohn's Disease Activity Index (PCDAI) score over time <sup>[3]</sup>
-----------------	---

End point description:

Pediatric Crohn's Disease Activity Index (PCDAI) is an index used to measure disease activity of pediatric patients with Crohn's disease assessing abdominal pain, stool frequency, patient functioning, hematocrit, erythrocyte sedimentation rate, albumin, weight, height, abdomen, perirectal disease, and extraintestinal manifestations. It ranges from 0 to 100; higher scores indicate more active disease. The baseline PCDAI value was defined as the last non-missing value on or before the date of the first dose of study drug during Protocol M06-806. Clinical response was defined as a PCDAI  $\geq 15$  points lower than the Protocol M06-806 baseline PCDAI value.

End point type	Primary
----------------	---------

End point timeframe:

Week 0, 4, 8, 12, 24, 36, 48, 60, 72, 84, 96, 108, 120, 144, 168, 192, 216, 240, 264, 288, 312, 336, 360, 384, 408

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of subjects who were in Crohn's Disease Activity Index (CDAI) clinical remission over time

End point title	Number of subjects who were in Crohn's Disease Activity Index (CDAI) clinical remission over time
-----------------	---

End point description:

The CDAI includes 8 variables encompassing both subject-reported (symptoms, general well-being) and objective (medication usage, laboratory variables, presence of abdominal mass or complications, and weight) variables. For symptoms scores, subjects kept track of daily symptoms on a diary card, and the daily symptom scores were summed for the week. Each item in the CDAI is assigned a specific weight, and the weighted values of the items are totaled to produce the CDAI score. Higher CDAI scores indicate greater disease activity; 0 is the lower limit with no set upper limit. The scale for the score is as follows: < 150 to indicate remission, 150 - 219 to define mildly active disease, 220 - 450 to define moderately active disease, and > 450 to define severely active disease. A CDAI was calculated at each visit for subjects who were age 13 or older at Protocol M06-806 entry. The Protocol M06-806 Week 52 visit served as the baseline visit for this study.

Notes:

[9] - ITT population: subjects who rcvd ≥ 1 dose of adalimumab and had ≥ 1 non-missing efficacy measurement

## Statistical analyses

No statistical analyses for this end point

### Secondary: Mean change from baseline in Crohn's Disease Activity Index (CDAI) over time

End point title	Mean change from baseline in Crohn's Disease Activity Index (CDAI) over time
-----------------	--

End point description:

The CDAI includes 8 variables: subject-reported (symptoms, general well-being) and objective (medication usage, laboratory variables, presence of abdominal mass or complications, and weight) variables. For symptoms scores, subjects kept track of daily symptoms on a diary card, and the scores were summed for the week. Each item in the CDAI is assigned a specific weight, and the items are totaled to produce the CDAI score. Higher CDAI scores indicate greater disease activity; 0 is the lower limit with no set upper limit. The scale for the score is as follows: < 150 (remission), 150 - 219 (mildly active disease), 220 - 450 (moderately active disease) and > 450 (severely active disease). A CDAI was calculated at each visit for subjects who were ≥ 13 years old at Protocol M06-806 entry. The baseline value was defined as the last non-missing value on or before the date of the first dose of study drug in Study M06-806. Negative changes indicate reductions (improvement) in disease activity.

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) and serious adverse events (TESAEs) were collected from the time of study drug administration in Protocol M06-806 until 70 days after the last dose of study drug in Protocol M06-807 (up to 470 weeks).

Adverse event reporting additional description:

TEAEs and TESAEs are defined as any adverse event (AE) or serious adverse event (SAE) with an onset date that is after the first dose of study drug until 70 days after the last dose of study drug and were collected whether elicited or spontaneously reported by the participant.

Assessment type	Systematic

### Reporting groups

Reporting group title	Any adalimumab
-----------------------	----------------

Reporting group description:

Adalimumab was administered via subcutaneous injection. Dosage was based on body weight and clinical status, and ranged from 10, 20, or 40 mg every other week to 20 or 40 mg every week.

Serious adverse events	Any adalimumab

occurrences (all)	5		
Rhinitis			
subjects affected / exposed	10 / 100 (10.00%)		
occurrences (all)	20		
Sinusitis			
subjects affected / exposed	17 / 100 (17.00%)		
occurrences (all)	33		
Staphylococcal infection			
subjects affected / exposed	5 / 100 (5.00%)		
occurrences (all)	7		
Tonsillitis			
subjects affected / exposed	7 / 100 (7.00%)		
occurrences (all)	8		
Upper respiratory tract infection			
subjects affected / exposed	31 / 100 (31.00%)		
occurrences (all)	60		
Urinary tract infection			
subjects affected / exposed	14 / 100 (14.00%)		
occurrences (all)	19		
Viral infection			
subjects affected / exposed	18 / 100 (18.00%)		
occurrences (all)	21		

Viral upper respiratory tract infection subjects affected / exposed occurrences (all)	39 / 100 (39.00%) 88		
Metabolism and nutrition disorders Decreased appetite subjects affected / exposed occurrences (all)	6 / 100 (6.00%) 6		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 October 2008	<p>Amendment 1</p> <ul style="list-style-type: none"> <li>Updated Inclusion Criterion #2 to clarify that subject must be responder during Study M06-806.</li> <li>Amended the stopping rules as follows: The rate of possibly related SAEs or higher, on a per subject per year basis in excess of 0.45, was changed to the proportion of SAEs, possibly related or higher, on a per subject basis in excess of 0.20.</li> <li>Changed overall rate, in excess of 0.09 infectious SAEs on a per subject per year basis to the overall proportion of infectious SAEs in excess of 0.20 on a per subject basis.</li> <li>Changed the protocol paragraph with text "If either of these criteria is met, no new enrollment will occur until the Data Monitoring Committee (DMC) or the Sponsor Steering Committee makes their recommendations" to "If either of the above criteria is met, the DMC will meet within 2 weeks to consider whether or not to recommend a temporary suspension of enrollment."</li> <li>Removed Section 12.2 re: publication.</li> <li>Administrative Changes: <ul style="list-style-type: none"> <li>Updated approvals from other indications to reflect the most current data available.</li> <li>Updated Safety Hotline address and contact information for AE reporting.</li> <li>Updated to add reference for current guidelines for treatment of latent TB to reference list.</li> <li>Appendix C (Documents Required Prior to Initiation of the Study): updated to reflect current regulatory requirements.</li> <li>Appendix D (Responsibilities of the Clinical investigator): updated to reflect current regulatory requirements.</li> <li>Appendix E (Centers for Disease Control [CDC] Treatment of Tuberculosis Infection [Preventive Therapy]): updated with current guidelines for treatment of latent TB.</li> <li>Appendix H (PCDAI User's Guide and Guideline for Reference Weight and Height): updated to clarify from Wk 48 to Wk 72 and from post Wk 72, using height from Wk 48.</li> <li>Appendix L (Excluded Medications): updated to state any previous anti TNF medication except infliximab before Study M06-806</li> <li>Appendix M (Day 70 Phone Call): updated faxing contact info.</li> </ul> </li> </ul>
26 August 2010	<p>Amendment 2</p> <ul style="list-style-type: none"> <li>Added blood sample collections for adalimumab concentration and AAA assays.</li> <li>Changed the stopping criteria for study based on discussion and recommendation by the DMC members.</li> <li>Added subject visits through Week 264 and provided for study to continue until local regulatory approval.</li> <li>Incorporated Administrative Changes 3 through 6 into this protocol.</li> <li>Added a new required template for protocol signatories (Appendix B).</li> </ul>
14 December 2010	<p>Amendment 3</p> <ul style="list-style-type: none"> <li>Included an interim analysis.</li> <li>Clarified that the x-ray for bone age was not to be performed at the unscheduled visit.</li> <li>Added a statement allowing the investigator to omit the x-ray for bone age and the determination of serum bone markers if the subject was no longer growing.</li> </ul>

29 June 2011	<p>Amendment 4</p> <ul style="list-style-type: none"> <li>Allowed dose and frequency decrease in subjects who responded well to treatment, allowed dose adjustment due to weight loss, and added 10 mg eow dosage.</li> </ul>
03 January 2012	<p>Amendment 5</p> <ul style="list-style-type: none"> <li>Added in regular TB testing in response to the US Food and Drug Administration required labeling change based on cases of reactivation of TB/occurrence or new TB infections in patients receiving Humira. The US package insert now says retest should be done "periodically" during therapy, without specifying the interval. Based on the actual US package insert and on literature search, annual TB rescreening was implemented as a reasonable interval.</li> </ul>
12 April 2013	<p>Amendment 6</p> <ul style="list-style-type: none"> <li>Added subject visits through Week 336 to extend the study.</li> <li>Section 3.0, Section 5.2.3.1, and Section 6.5 were revised to include additional anti-TNF information per Humira standards, and provided background information about enhanced data collection to understand the risks of malignancy in subjects 30 and younger.</li> <li>Section 5.2.3.2 Concomitant Therapy was revised to allow immunosuppressant to be started or restarted during the study. In addition, a sentence regarding the use of therapeutic enemas, suppositories and TPN was added to encourage the investigator to discuss with the Medical Monitor prior to use.</li> <li>In Section 5.2.3.4 Prohibited Medication, the use of therapeutic enemas and suppositories was removed.</li> <li>Section 5.3.1.1 Study Procedures (Outcomes): A clarification on the completion procedure of the WPAI-CD Caregiver was added.</li> <li>Section 5.3.2.1 Collection of samples for analysis: A clarification on collecting samples for subjects who require switching or change dose was added.</li> <li>Section 5.5.2.1 Packaging and Labeling was revised.</li> <li>Section 6.6 Pregnancy: The verbiage regarding the pregnancy registry was removed, as the registry is closed to Humira subjects and is only enrolling in the comparator (non-Humira) arm.</li> <li>Incorporated Administrative Change 7 into this protocol.</li> </ul>
26 May 2015	<p>Amendment 7</p> <ul style="list-style-type: none"> <li>Added subject visits through Week 408 (approximately 8 years) to extend the study and provide for study to continue until local regulatory approval.</li> <li>Added the Complaint and Product Complaint definition to Sections 6.0, 6.2.1, and 6.2.2 as well as the reporting requirements for Product Complaints.</li> <li>Updated Section 8.1.5, Interim Analysis.</li> <li>Incorporated Administrative Changes 8 and 9 into this protocol.</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
