Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 February 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 February 2012
Global end of trial reached?	Yes
Global end of trial date	31 December 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

In a phase II setting in MRI-defined locally advanced rectal cancer to assess the downstaging effectiveness of preoperative chemoradiotherapy using capecitabine/ irinotecan/cetuximab plus radiotherapy using the primary endpoint of clear (R0) circumferential resection margin rate.

Protection of trial subjects:

UCL CTC provided safety information to the TMG on a periodic basis for review. Trial safety data was monitored to identify: • New adverse reactions to the trial treatment regimen or individual trial treatments; • A higher incidence in rare adverse events than is stated in the IB/SPC for a trial treatment; • Trial related events that are not considered related to the trial treatment regimen. Should UCL CTC have identified or suspected any issues concerning patient safety at any point throughout the trial, the CI or TMG would have been consulted for their opinion.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 March 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Ireland: 12
Country: Number of subjects enrolled	United Kingdom: 70
Worldwide total number of subjects	82
EEA total number of subjects	82

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	52
From 65 to 84 years	30
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

82 patients were recruited in total, 70 within the United Kingdom and 12 in the Republic of Ireland. The trial was opened to recruitment on the 30/03/2009, the first patient was recruited on the 09/04/2009, the last patient was recruited on the 25/10/2011.

Pre-assignment

Screening details:

N/A

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Overall Trial
------------------	---------------

Arm description:

Patients were treated with pelvic radiotherapy to a planned volume at a dose of 45 Gy in 25 daily fractions of 1.8 Gy treating 5 days per week from Monday-Friday for five weeks in total. Concurrently they received oral capecitabine at 650 mg/m² bd for 5 days per week on the days of radiotherapy only. In addition they received IV irinotecan at 60 mg/m² once per week during the 1st, 2nd, 3rd and 4th weeks of radiotherapy. In addition, they received a loading dose of IV cetuximab at 400 mg/m² one week before the commencement of radiotherapy then at 250 mg/m² once per week during the 1st, 2nd, 3rd, 4th and 5th weeks of radiotherapy. Six weeks post completion of chemoradiation (CRT) patients received an MRI scan to judge response. At eight weeks post CRT patients underwent surgery.

Arm type	Experimental
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral capecitabine at 650 mg/m² bd for 5 days per week on the days of radiotherapy only.

Investigational medicinal product name	Irinotecan
Investigational medicinal product code	
Other name	Irinotecan Hydrochloride, Campto
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

IV irinotecan at 60 mg/m² once per week during the 1st, 2nd, 3rd and 4th weeks of radiotherapy.

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	Erbitux
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

loading dose of iv cetuximab at 400 mg/m² one week before the commencement of radiotherapy then at 250 mg/m² once per week during weeks 1, 2, 3, 4 and 5 radiotherapy i.e. six doses of cetuximab in total

Number of subjects in period 1	Overall Trial
Started	82
Completed	80
Not completed	2

Primary: Primary endpoint

End point title	Primary endpoint ^[1]
End point description:	
Histologically confirmed R0 resection rate i.e. the carcinoma is resected with margins clear by >1mm	
End point type	Primary
End point timeframe:	
Resection was recommended 8 weeks after completion of treatment	
Notes:	

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The page would not allow us to enter a single arm comparison group, the error stated two arms had to be selected, whereas the help said a single arm can be selected if it is a single arm trial. Excite is single arm and it would not accept this so we deleted the data to be able to submit and have emailed EudraCT for guidance.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 February 2008	Trial documentation changed to advise not to take St John's Wort whilst receiving Irinotecan, exclusion criteria and patient information sheet changed.
28 July 2008	•Section 14 Pharmacovigilance- whole section has been replaced with current CTC PV template. Contains more detailed and specific information with regards to reporting procedures.
08 August 2008	Change in concentration of cetuximab increasing from 2mg/ml to 5mg/ml
16 October 2008	<ul style="list-style-type: none">• Introduction- additional paragraph added regarding Kras testing• Statistical considerations- last paragraph amended to reflect the new additional paragraph regarding Kras• Pharmacovigilance- whole section deleted and new CTC template inserted to reflect current procedures• Ancillary studies- new paragraph added regarding Kras testing
24 February 2009	Amendment to protocol and PIL. MRI assessment changed from needing to be within 28 days of start of treatment to registration.
07 May 2010	<ul style="list-style-type: none">• Increase in recruitment target by an additional 40 patients• Inclusion criteria updated and an increase in baseline investigations timelines• Extra information for quality control of radiotherapy & pathology clarification• Change to trial drug distribution• Monitoring and PV changes and minor administrative amendments
20 October 2010	Amendment to capecitabine label. Irinotecan now to be supplied from hospital stock and will not need a clinical trial specific label.
04 January 2012	<ul style="list-style-type: none">• Updates to sections 14 (Trial monitoring and Oversight), 15 (Pharmacovigilance), 16 (Incident reporting and Serious Breaches), 17 (Ethics and Regulatory approvals) and 18 (Sponsorship and indemnity) of the protocol to reflect current internal procedures and practices.• Amendment to section 19 (Biological Studies); Addition of further biological Studies, which was previously omitted from the protocol & clarification regarding immunohistopathological investigations.
22 January 2015	Change of end of trial definition updated to the 31st August 2015 to allow for translational studies to be performed. Timeframe in which adverse events are collected has been amended to 36 months post CRT. Addition of appendix 4 – Translational Studies and Methodology.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
------	--------------	--------------

09 February 2010	Interruption to recruitment, 40 patients reached and sites temporarily closed to recruitment, re-opened in August 2010. Reactivation teleconferences held, re-initiation for sites who did not recruit prior to interruption.	-
------------------	---	---

Notes:

Limitations and caveats

None reported
