Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 April 2015
Global end of trial reached?	Yes
Global end of trial date	24 April 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to show increased bone mineral density (BMD) of the proximal femur (total hip [TH] BMD) after injection of rhBMP-2/CPM (either 1 mg/mL) as an adjunct to systemic osteoporosis (OP) therapy. To assess the primary objective, BMD was measured by dual-energy x-ray absorptiometry (DXA) every 3 months from 6 to 12 months.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. In addition, all local regulatory requirements were followed, in particular, those affording greater protection to the safety of trial participants.

Background therapy:

Regardless of treatment group assignment, bisphosphonate, calcium, and vitamin D were provided to all study participants as background therapy to provide adequate protection against osteoporosis.

Evidence for comparator: -

Actual start date of recruitment	03 December 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	60 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	United States: 41
Worldwide total number of subjects	46
EEA total number of subjects	5

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	45
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 10 centers in the United States of America, Belgium, and Poland.

Pre-assignment

Screening details:

Treatments were stratified by previous OP therapy regardless of rhBMP-2/CPM treatment assignment; bisphosphonate, calcium, vitamin D were provided to all participants as background concomitant OP therapy. Due to early termination of participant enrollment, efficacy analyses were not performed as the study never reached its intended sample size.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The trial was designed to allow for the Sponsor to be fully unblinded throughout the trial. To minimize the selection bias, the trial used a centralized, automated randomization procedure. Separate randomization lists were available for each randomization strata (Naïve participants and those with previous exposure to system OP therapy). To further reduce selection bias, randomization was carried out at the level of the hip, systematically and prospectively designated by the randomization schema.

Arms

Are arms mutually exclusive?	Yes
Arm title	Standard of Care Control

Arm description:

Participants had received systemic osteoporosis therapy with an oral bisphosphonate plus supplemental calcium, and vitamin D as prescribed by the study physician.

Arm type	Active comparator
Investigational medicinal product name	Oral bisphosphonate therapy, Calcium and Vitamin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Oral bisphosphonate plus supplemental calcium, and vitamin D as prescribed by the study physician.

Arm title	rhBMP-2/CPM 1.0 mg/mL
------------------	-----------------------

Arm description:

Participants had received 1 mg/mL rhBMP 2/CPM administered via intraosseous injection administered percutaneously to the proximal femur. Participants in treatment groups additionally received SOC treatment for OP.

Arm type	Experimental
Investigational medicinal product name	rhBMP-2/CPM (Dibotermis alfa)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intraosseous use

Dosage and administration details:

1 mg/mL rhBMP-2/CPM administered via intraosseous injection administered percutaneously to the proximal femur.

Arm title	rhBMP-2/CPM 2.0 mg/mL
Arm description: Participants had received 2 mg/mL rhBMP 2/CPM administered via intraosseous injection administered percutaneously to the proximal femur. Participants in both injected treatment groups additionally received SOC treatment for OP.	
Arm type	Experimental
Investigational medicinal product name	rhBMP-2/CPM (Diboterminal alfa)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intraosseous use

Dosage and administration details:

2 mg/mL rhBMP-2/CPM administered via intraosseous injection administered percutaneously to the proximal femur.

Number of subjects in period 1	Standard of Care Control	rhBMP-2/CPM 1.0 mg/mL	rhBMP-2/CPM 2.0 mg/mL

Primary: Change from Baseline in Bone Mineral Density (BMD) measured by Dual-Energy X-ray Absorptiometry (DXA)

End point title	Change from Baseline in Bone Mineral Density (BMD) measured by Dual-Energy X-ray Absorptiometry (DXA) ^[1]
End point description: Evaluating local changes (expected increases) in BMD after administration of rhBMP-2/CPM, compared to those observed with systemic osteoporosis therapy alone. Alternatively, if changes in the total area surrounding the proximal femur are observed, bone mineral content (BMC) may instead be applied for the primary measure. BMD is defined as a derived measure of bone density, generated by dividing the bone mineral content value obtained from a bone densitometry technique (for example, DXA) by the total area of the region scanned. Due to early termination of participant enrollment, mainly descriptive statistics were provided, and no statistical tests were performed.	
End point type	Primary
End point timeframe: 12 months post dose	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No inferential statistical analysis was done.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were collected from the time of written informed consent through 3 years, month 36 (Visit 10) for SOC participants and through 5 years, month 60 for participants who either received 1.0 mg/mL or 2.0 mg/mL of rhBMP-2/CPM.

Adverse event reporting additional description:

The as-treated population included randomly assigned participants who received at least 1 dose of rhBMP-2/CPM or comparator agent. Participants in the as-treated population are grouped according to the treatment they received (not the treatment to which they were randomly assigned).

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 October 2009	In Protocol amendment 1, the following changes were made; reduced number and type of diagnostic tests for Cohort 2, Removed mandatory postdosing hospital stay for Cohort 2, Extended VAS assessment, Revised Risk/Benefits Section, Shifted full physical examination from screening to predosing and added parameters for obtaining detailed medical history, Incorporated predefined stopping criteria specific to Cohort 2, Incorporated upper age limit of 85 years old. [Previously, participants ≥ 65 years were allowed to be enrolled], Revised terminology to describe SOC, Revised permitted/prohibited concomitant therapies, Expanded window between randomization and treatment from 24 hours to 1 week (7 days), Clarified eligibility criterion regarding use of anticonvulsant agents, Physically revised protocol so that sections of Synopsis and Body matched, Provided criteria for participant discharge, Added guidelines for pain management, Revised contact information to reflect changes in Wyeth study staff, Clarified dosing regimens and provide guidelines for calcium and vitamin D Revised verbiage for clarity and to better reflect original protocol intent.
29 September 2010	In protocol amendment 2, bone resorption to key safety events was added.
19 September 2011	In Protocol amendment 3, the following changes were made; MRI test was added as a mandatory procedure at the 24 month visit for Cohort 2 participants. MRI was a mandatory study procedure at the 36 month visit for all participants Volumetric QCT was not needed for safety follow-up; and therefore, was replaced with the MRI test. Cohort 1 received vQCT at the 24 month visit; Cohort 2 did not receive vQCT at 24 months, Radiation exposure was the same for Cohort 1 participants, but not for Cohort 2 participants because participants in this group did not receive vQCT at 24 months, Clarified the difference between follow-up vQCT scans for Cohort 1 and Cohort 2.
01 March 2012	In Protocol amendment 4, the following changes were made; text updated to reflect that Emergency contact, as well as SAE reporting fax, is no longer centralized in the USA. Each country has its own emergency contact phone number and SAE fax reporting number, Medication errors text moved and AE reporting text updated to comply with Pfizer language and format, Study suspension, termination and completion text removed; redundant with Section 5 Synopsis Ethical Considerations, and text added with respect to reporting of safety issues and serious breaches of the protocol or ICH GCP.

26 October 2012	In Protocol amendment 5, the following changes were made; projected duration of the study was updated from 46 months to 70 months. Taking into consideration the 2 confirmed cases of ON, which was considered as an important identified risk in participants with OP who received a percutaneous injection of rhBMP 2/CPM administered intraosseously into the proximal femur, Pfizer decided it would be necessary to continue following participants in the 1 and 2 mg/mL rhBMP 2/CPM treatment arms for a total of 5 years after TA injection, Duration of participant participation was updated from 36 months to 60 months for participants who received the TA (see above), In the follow-up period, additional annual evaluations at 48 and 60 months for participants who received (either 1 mg/mL or 2 mg/mL of rhBMP 2/CPM were added. This long-term extension was intended to provide supportive safety data for inclusion in the regulatory filing. Participants were to be followed for AEs and SAEs during this time, The protocol flowchart was updated to reflect the 2 additional safety evaluations scheduled at 48 and 60 month post TA injection for participants in the 1 and 2 mg/mL rhBMP 2/CPM treatment arms. SOC participants were planned to complete the study following the 36 month follow up visit. Because participants were to be followed for safety reasons after 36 months, text was amended to state that the investigator could decide whether or not the supplemental calcium and vitamin D as well as BP therapy was needed for each participant, Evaluations at additional follow-up visits added to the protocol text and Imaging modality section was updated in order to add Pelvic MRI as imaging procedure, and also to document there was no radiation exposure with pelvic MRI procedure.
-----------------	--

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
26 August 2010	Enrollment was terminated on 26 August 2010, due to the finding of an unexpected proximal femur fracture in a study medication-injected participant shortly after study medication injection and long-term follow-up of participants in the rhBMP-2/CPM-administered groups was extended from 36 months to 60 months.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to early termination of participant enrollment, mainly descriptive statistics were provided, and no statistical tests were performed. The study was terminated early due to safety concerns.

Notes:
