Clinical trial results:
A Phase I/II single-arm trial to evaluate the combination of cisplatin and gemcitabine with the mTOR inhibitor temsirolimus for treatment of advanced cancers, including first-line treatment of patients with advanced transitional cell carcinoma of the urothelium.

General information about the trial

Main objective of the trial:

The overall objective of this trial is to assess whether the addition of temsirolimus to standard cipslatin/gemcitabine cancer chemotherapy is a safe and effective treatment for patients with advanced malignancy and an effective treatment for patients with advanced urothelial cancer.

Phase I of the trial aims to establish the appropriate dose and schedule of temsirolimus when used in combination with gemcitabine and and cisplatin for patients with advanced non-haematological malignancy.

Phase II of the trial aims to establish activity, safety and feasibility of this combination in participants with advanced transitional cell carcinoma of the urothelium. Activity will be measured by determining the number of patients who are alive at six months and have responded completely or partially to treatment or who have stable disease, according to strict radiological criteria i.e. progression-free survival (PFS) six months after enrolment.

Protection of trial subjects:

The safety review committee (SRC) met to review each cohort of 3 patients and to decide whether or not to escalate to the next dose level, to recruit additional participants at the current dose level or to discontinue dose escalation.

Recruitment

Recruitment details:

Trial open date: 31 December 2012 and Open for 38 months. Recruitment was stopped August 2015.

Pre-assignment

Screening details:

Main Inclusion Criteria: For all participants: 1) Locally advanced and/or metastatic disease. Not suitable for radical radiotherapy or curative surgery 2) Life expectancy ≥3 months 3) WHO Performance status 0-2 4) Fit to receive cisplatin-containing combination chemotherapy 5) Informed consent.

Period 1

Period 1 title	Full trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Experimental
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Temsirolimus
Investigational medicinal product code	
Other name	Torisel
Pharmaceutical forms	Concentrate for solution for injection/infusion
Routes of administration	Intravenous bolus use
Dosage and administration details: 10 mg at different days per cohort	
Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Intravenous bolus use
Dosage and administration details: 70 mg day 1 of every cycle	
Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for injection/infusion
Routes of administration	Intravenous bolus use
Dosage and administration details: 1000 mg day 1, 8	

Number of subjects in period 1[1]	Experimental
Started	14
Completed	7
Not completed	7
Consent withdrawn by subject	1
Physician decision	2
Disease progression	1
Adverse event, non-fatal	2
Poor rationale for treatment in palliative setting	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.
Justification: One patient was found to not be eligible so did not receive any trial treatment or provide any data to the trial
