

Clinical trial results:

A Prospective, Single-blind, Randomized, Phase II/III Study to Evaluate the Safety and Efficacy of Fibrin Sealant Grifols (FS Grifols) as an Adjunct to Hemostasis During Peripheral Vascular Surgery

Summary

EudraCT number	2008-000072-25
Trial protocol	ES GB
Global end of trial date	05 May 2014

Results information

Result version number	v1 (current)
This version publication date	01 July 2016
First version publication date	01 July 2016

Trial information

Trial identification

Sponsor protocol code	IG402

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001598-PIP01-13
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	05 May 2014
Global end of trial reached?	Yes
Global end of trial date	05 May 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and hemostasis effectiveness of human plasma-derived fibrin sealant Grifols (FS Grifols) in peripheral vascular surgery

Protection of trial subjects:

For each investigative site, the Primary Part (II) started only after the enrollment of at least 2 subjects in the Preliminary Part (I). In addition, for any trial site, the Primary Part (II) could start only after the enrollment of a set of at least 20 subjects at any site(s) into the Preliminary Part (I), with no safety issues raised by the independent Medical Monitor. As requested by the Main Research Ethics Committee for the study in the UK, trial sites in the UK had the additional requirement that the Data Safety Monitoring Board (DSMB) raised no safety issues that recommended against starting the Primary Part (II) in the UK. Further, at any trial site, the Primary Part (II) could not begin until formally approved for each country by the Sponsor.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 October 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 78
Country: Number of subjects enrolled	United Kingdom: 117
Country: Number of subjects enrolled	Canada: 44
Worldwide total number of subjects	239
EEA total number of subjects	195

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	79
From 65 to 84 years	153
85 years and over	7

Subject disposition

Recruitment

Recruitment details:

Study Initiation Date: 20 October 2008; Study Completion Date: 05 May 2014

Nineteen sites were initiated in Canada, Spain, and the United Kingdom (UK). From these, 18 sites enrolled patients.

Pre-assignment

Screening details:

A total of 371 subjects were enrolled in the study (signed informed consent). Of these, 240 (64.7%) subjects complied with eligibility criteria and underwent vascular surgery.

Pre-assignment period milestones

Number of subjects started	371 ^[1]
Number of subjects completed	239

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Protocol deviation: 2
Reason: Number of subjects	Adverse event, serious fatal: 9
Reason: Number of subjects	Lost to follow-up: 7
Reason: Number of subjects	Consent withdrawn by subject: 15
Reason: Number of subjects	Screening failures: 98
Reason: Number of subjects	Dropout after randomize & prior to treatment: 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number of subjects enrolled in the trial is the same as the total number of subjects at the end of the pre-assignment period. The patients that did not complete the pre-assignment period are those that were screening failures and were not enrolled in the trial, due to different reasons.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Blinding implementation details:

In the Preliminary Part (I) of the study, all subjects were treated with FS Grifols. In the Primary Part (II) of the study, subjects were blinded to their study treatment, but the Investigator was not blinded as this was not feasible due to the very different nature of the 2 hemostatic treatments to be applied.

Treatment group assignments were made using sealed blinded randomization envelopes that were only opened upon identification of an eligible TBS during the procedure.

Arms

Are arms mutually exclusive?	Yes
Arm title	Preliminary Part (I) - FS Grifols

Arm description:

All subjects enrolled in the Preliminary Part (I) were treated with FS Grifols. This part of the trial had 2 main objectives:

- 1) To ensure that local study teams familiarized themselves with the technique of FS Grifols application and with the intra-operative procedures required by the protocol. To meet this objective, the first 2 subjects at each site were enrolled and treated with FS Grifols.
- 2) To assess the clinical safety of FS Grifols. Treatment of 20 subjects with FS Grifols was considered sufficient for an initial assessment of clinical safety.

Arm type	Experimental
Investigational medicinal product name	Fibrin Sealant Grifols
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for sealant
Routes of administration	Topical use
Dosage and administration details:	
Up to two 3-mL kits applied topically via drip applicator tip at the target bleeding site (TBS)	
Arm title	Primary Part (II) - FS Grifols
Arm description:	
In the Primary Part (II), subjects were randomly assigned 2:1 to treatment with Fibrin Sealant Grifols or Manual Compression, respectively.	
Arm type	Experimental
Investigational medicinal product name	Fibrin Sealant Grifols
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for sealant
Routes of administration	Topical use
Dosage and administration details:	
Up to two 3-ml kits applied topically via drip applicator tip at the target bleeding site (TBS).	
Arm title	Primary Part (II) - Manual compression
Arm description:	
In the Primary Part (II), subjects were randomly assigned 2:1 to treatment with Fibrin Sealant Grifols or Manual Compression, respectively.	
Subjects randomized to Manual Compression received application of manual compression with surgical gauzes at the target bleeding site (TBS).	
Arm type	hemostatic action considered standard & effective
No investigational medicinal product assigned in this arm	

Number of subjects in period 1	Preliminary Part (I) - FS Grifols	Primary Part (II) - FS Grifols	Primary Part (II) - Manual compression
Started	72	110	57
Completed	59	94	52
Not completed	13	16	5
Adverse event, serious fatal	6	2	1
Consent withdrawn by subject	4	9	2
loss of contact	1	-	-
Lost to follow-up	1	5	1
Protocol deviation	1	-	1

Reporting group title	Primary Part (II) - Manual compression
Reporting group description: In the Primary Part (II), subjects were randomly assigned 2:1 to treatment with Fibrin Sealant Grifols or Manual Compression, respectively. Subjects randomized to Manual Compression received application of manual compression with surgical gauzes at the target bleeding site (TBS).	
Subject analysis set title	Preliminary Part (I) - FS Grifols (ITT)
Subject analysis set type	Intention-to-treat
Subject analysis set description: In the Preliminary Part (I), the intent-to-treat (ITT) analysis set was defined as all subjects who underwent surgery and met the intra-operative inclusion criterion.	
Subject analysis set title	Primary Part (II) - FS Grifols (ITT)
Subject analysis set type	Intention-to-treat
Subject analysis set description: In the Primary Part (II), intent-to-treat (ITT) analysis set was defined as all subjects who underwent surgery, met the intra-operative inclusion criterion, had a randomization envelope opened, and still met the intra-operative inclusion criterion after randomization.	
Subject analysis set title	Primary Part (II) - Manual Compression (ITT)
Subject analysis set type	Intention-to-treat
Subject analysis set description: In the Primary Part (II), intent-to-treat (ITT) analysis set was defined as all subjects who underwent surgery, met the intra-operative inclusion criterion, had a randomization envelope opened, and still met the intra-operative inclusion criterion after randomization.	
Subject analysis set title	Preliminary Part (I) - FS Grifols (PP)
Subject analysis set type	Per protocol
Subject analysis set description: The per protocol (PP) population was defined as the ITT population excluding any subjects who did not actually receive either study treatment or who had a major protocol violation. Major protocol violations and the final PP population were determined before database lock.	
Subject analysis set title	Primary Part (II) - FS Grifols (PP)
Subject analysis set type	Per protocol
Subject analysis set description: The per protocol (PP) population was defined as the ITT population excluding any subjects who did not actually receive either study treatment or who had a major protocol violation. Major protocol violations and the final PP population were determined before database lock.	
Subject analysis set title	Primary Part (II) - Manual Compression (PP)
Subject analysis set type	Per protocol
Subject analysis set description: The per protocol (PP) population was defined as the ITT population excluding any subjects who did not actually receive either study treatment or who had a major protocol violation. Major protocol violations and the final PP population were determined before database lock.	

Primary: Time to Hemostasis (TTH)

End point title	Time to Hemostasis (TTH)
-----------------	--------------------------

End point description:

The precise TTH was not observable in this study. However, if hemostasis had not been achieved at a given assessment time point, but had been achieved at the next assessment time point, then it was inferred that the true TTH was between the 2 assessment time points. Therefore, TTH, although not observed directly, was ascertained as falling into 1 of 5 hemostatic time categories (HTCs) or the non-HTC as follows:

1. $HTC \leq 3$: ≤ 3 minutes from TStart to hemostasis.
2. $HTC > 3$ to ≤ 4 : > 3 minutes to ≤ 4 minutes from TStart to hemostasis.
3. $HTC > 4$ to ≤ 5 : > 4 minutes to ≤ 5 minutes from TStart to hemostasis.
4. $HTC > 5$ to ≤ 7 : > 5 minutes to ≤ 7 minutes from TStart to hemostasis.
5. $HTC > 7$ to ≤ 10 : > 7 minutes to ≤ 10 minutes from TStart to hemostasis.

Treatment failure includes: brisk bleeding from the TBS during the 10 minutes observational period, TTH > 10 minutes and re-bleeding from the TBS before surgical closure of the field containing the TBS

End point type	Primary
----------------	---------

End point timeframe:

TTH is measured in minutes from the start of treatment application (TStart) at the Target Bleeding Site (TBS) to the achievement of hemostasis at that site or to the end of the 10-minute observational period if hemostasis has not yet been achieved.

occurrences (all)	12	3	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 November 2010	<p>Balanced the ratio of grafts enrolled in the Primary Part (II) of the study: in order to achieve a similar representation of both types of graft (PTFE or Dacron), after the enrollment of approximately 90 subjects with one of both types of graft (PTFE or Dacron), the Sponsor of the clinical trial permitted enrollment of only subjects with the other type of graft into the Primary Part (II) of the study.</p> <p>Added femoral endarterectomy with patch angioplasty and ilio-femoral bypass grafting as acceptable surgical procedures.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
