Clinical trial results:

An international, double-blind, randomized, multi-center, parallel group, historical-control conversion to monotherapy study to evaluate the efficacy and safety of brivaracetam in subjects (16 to 75 years old) with partial onset seizures with or without secondary generalization Summary

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the efficacy of Brivaracetam (BRV) in the conversion to monotherapy at the doses of 50 and 100 mg/day (administered in two equal doses per day) in subjects with partial onset seizures when compared to a historical pseudo-placebo control group.

Protection of trial subjects:

Standard measures to minimize pain and distress.

Background therapy:

Not applicable

Evidence for comparator:

Not applicable

Actual start date of recruitment	06 August 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	8 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects 6	enrolled	per age	group
------------	----------	---------	-------

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	59
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This multi-Center study started to enroll subjects in August 2008 and concluded in March 2010.

Pre-assignment

Screening details:

The Participant Flow refers to the Randomized Set (RS).

Subjects withdrawn due to meeting an exit criterion are included in the count of early discontinuations with a reason of "Adverse Event" or "Lack of efficacy" as reported by the Investigator.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were collected from Week 0 over the 1-week BRV Add-On Period and the 15-week Evaluation Period until the end fo Follow-Up Period (Week 23) or Early Discontinuation Visit.

Adverse event reporting additional description:

Adverse Events refer to the Intent-to-Treat (ITT) Set, consisting of all randomized subjects with at least 1 intake of study medication.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 April 2008	Protocol Amendment 1 was finalized on 04 Apr 2008, before any subjects were enrolled, and resulted in the following: • Replacement of the option for enrollment in N01199 and N01125 with the option of enrollment in N01315. This change was based on feedback received from ethics committees and regulatory authorities in some European countries. Addition of text describing randomization stratification by region to provide clarity with regard to the percentage of the subjects anticipated for enrollment in the US • Clarification that the total duration of the Baseline Period was 8 weeks ±1 week • Replacement of exclusion criteria referring to "clusters" of seizures with "seizure patterns being too frequent or indistinctively separated to reliably be counted." in order to more clearly define the term "clusters" • Addition of a recommendation for the sites to call subjects weekly to promote good completion of the subject diary. Text referring to this recommendation was added to the Informed Consent
04 April 2008	Protocol Amendment 1 was finalized on 04 Apr 2008, before any subjects were enrolled, and resulted in the following: • Replacement of the interactive voice response system (IVRS) with EDC for screening subjects. This change was made in accordance with recommendations of the IVRS and Seizure Frequency EDC system provider • Replacement of the subject's daily record card (DRC) with the CRF as the location for recording the "Investigator Seizure Assessment" • Addition of requirement that Investigator confirm AEs next to subject's entry of seizure data on DRC itself • Correction of typographical errors • Revision of the methods for handling missing data in acknowledgement of the fact that no details were known regarding the way missing data were handled, if at all, in the historical-control studies. Thus the application of any imputation rule for the assessment of Exit Criterion 2 during the study (and implemented in the study EDC system) leading to subjects being prematurely or incorrectly exited from the study was avoided. Final sensitivity analyses were to include these revised methods. The possibility for the Investigator exiting subjects on the basis of Exit Criterion 4 was considered an adequate safeguard against subjects remaining too long in the study if missing data interfered with the assessment of Exit Criteria 1 or 2.
02 November 2009	Protocol Amendment 2 was finalized on 02 Nov 2009 and resulted in the following: Addition of a recruitment hold and interim analysis. This change was motivated by ongoing monitoring that suggested a higher than expected number of subjects discontinuing either for predefined exit criteria or other reasons. The interim analysis was to include efficacy information for all subjects who had an opportunity to complete 112 days of treatment after initiation of concomitant AED tapering by the time of the defined clinical cut-off date Establishment of an IDMC to review primary efficacy, sensitivity, and safety data for the purpose of making a recommendation to the Sponsor regarding study continuation Elimination of the requirement for restricted database access of the study team before approval of the final Statistical Analysis Plan (SAP) in accordance UCB Standard Operating Procedures (SOPs) revised subsequent to study initiation. Due to this change and because the primary efficacy analysis was fully specified in the original and amended protocols, this requirement was eliminated from this protocol Updates of UCB study personnel and the List of Abbreviations Following the recruitment hold a decision was made to require subjects who were in the Baseline Period, the BRV Add-On Period, and the AED Tapering Phase to terminate the study. Subjects who had already progressed to the Monotherapy Phase were permitted to remain in the study.

16 November 2009	Protocol Amendment 3 was finalized on 16 Nov 2009 (after the recruitment hold) and resulted in the following: • Provision for enrollment in N01315 for subjects discontinued from the BRV Add-On Period or the Baseline AED Tapering Phase due to recruitment hold and interim analysis. This enrollment option was made available to provide continued treatment with BRV to these subjects as deemed beneficial by both subjects and Investigators • Correction of an error in Amendment 2 that placed information pertaining to database access and SAP finalization in an incorrect section of the protocol
