Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 October 2015
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 May 2015
Global end of trial reached?	Yes
Global end of trial date	12 June 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate survival - with larynx function after 3 years in patients with response evaluated based on the primary tumour (T category) after induction TPF and treated with RT + Cetuximab

Protection of trial subjects:

The study medication was administered by the investigator or under their direct supervision. Given that the intravenous infusions were administered in a hospital or in an outpatient environment, compliance with the treatment could be easily monitored. The date and the start and end time of the infusion, as well as the exact quantity of cetuximab and TPF (docetaxel, cisplatin, 5-fluorouracil) administered at each infusion were recorded in the patient's medical record. If the treatment was modified, the medical staff had to evaluate the percentage of the dose received by the patient and record this in the CRF. All the reasons for non-compliance had to be recorded. As a standard precaution, the patients included in the study were under observation from the start of the infusion of cetuximab until at least 1 hour after the end of the cetuximab infusion in a quiet area with resuscitation equipment and other drugs required in case of an emergency (epinephrine, prednisolone and equivalent medicinal products). In the event that the treatment had to be interrupted during the infusion, the staff responsible for the procedure had to estimate the percentage of the dose received by the patient and record this in the CRF. The reasons for any lack of therapeutic compliance had to be recorded. Inadequate compliance with the cetuximab administration regimen was defined as missing more than 2 consecutive infusions for reasons other than toxicity. In the event of insufficient compliance by the patient, the principal investigator and the study coordinator decided together, on a case by case basis, regarding the possible withdrawal of the patient from the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 October 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	36 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 94
Worldwide total number of subjects	94
EEA total number of subjects	94

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	76
From 65 to 84 years	18
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

94 patients were included.

Part I: 93 patients received at least one dose of chemotherapy with TPF (ITT 1)

Part II: 72 patients received RT+cetuximab treatment (ITT 2)

This was a national study with all patients being included at 15 Spanish sites

Pre-assignment

Screening details:

Key inclusion criteria: 18-70 years of age, life expectancy >3 months, histologically demonstrated larynx squamous carcinoma, to be able to receive TPF treatment followed by normofractionated radiotherapy with cetuximab, adequate hepatic and renal function.

1 patient did not meet all the study inclusion criteria and did not start TPF treatment

Period 1

Period 1 title	Part I + Part II (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	Arm 1
-----------	-------

Arm description:

The response obtained for the primary tumour after induction TPF determined the subsequent measures and treatments:

-Complete or partial response of the T category: Three to five weeks after the administration of the 3rd cycle of TPF, normofractionated RT was started. Cetuximab had to be administered at one week prior to the start of RT and maintained weekly until the end of the RT.

-T stabilisation or disease progression (T and/or N): These patients had to be offered rescue surgery at the earliest date possible.

Arm type	Experimental
Investigational medicinal product name	TPF
Investigational medicinal product code	
Other name	Docetaxel, cisplatin, 5-fluorouracil
Pharmaceutical forms	Infusion
Routes of administration	Intravascular use

Dosage and administration details:

Treatment is initiated with 3 cycles of TPF (docetaxel, cisplatin, 5-fluorouracil) every 3 weeks with G-CSF (lenograstim was recommended) and ciprofloxacin.

Treatment regimen, pretreatment and supporting measures:

- Docetaxel and Cisplatin: daily dose of 75 mg/m² by intravenous infusion over 1 hour on day 1.

-5-FU: daily dose of 750 mg/m² given over 24-hour infusion between days 1-5.

-Dexamethasone: 16 mg daily dose, 8 mg administered every 12 hours, at days -1, 1 and 2.

-Ciprofloxacin: 1g daily dose, 500 mg administered every 12 hours between days 7-15.

-G-CSF: subcutaneous administration of 150 ug/m²/d between days 7-12

The response obtained for the primary tumour after induction TPF determined the subsequent measures and treatments. The complete evaluation of the response had to be done in the 2 or 3 weeks immediately after the administration of the 3rd cycle of TPF.

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion

Routes of administration	Intravenous use
--------------------------	-----------------

Dosage and administration details:

Cetuximab was administered continuously weekly, from one week before the start of RT.

-The initial dose of 400 mg/m²/d in the first infusion for 120 minutes on day 1.

-On days 8, 15, 22, 29, 36, 43 and 50 (or to the end of the RT if any delay of RT) cetuximab was administered at a daily dose of 250 mg/m² by intravenous infusion over 1 hour.

No statistical analyses for this end point

Secondary: Specific survival free of total laryngectomy

End point title	Specific survival free of total laryngectomy
-----------------	--

End point description:

By definition, specific survival free of laryngectomy is the time from the start of TPF treatment to death caused by the disease or by the treatment of the disease, or even to surgery involving total laryngectomy. Deaths caused by other reasons were considered "censored" data on the date of death. By definition an event was considered to be total laryngectomy, death from disease progression, disease-related complications and treatment-related events. The following data were considered censored: death by reasons other than those mentioned above, the latest assessment of larynx function or the latest X-ray.

End point type	Secondary
----------------	-----------

End point timeframe:

From the start of TPF treatment to death

End point values	ITT 1	ITT 2		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	93	72

2 years	74.2 (64.9 to 83.6)	84.0 (75.3 to 92.7)		
3 years	71.5 (61.8 to 81.2)	80.8 (71.3 to 90.2)		

Statistical analyses

No statistical analyses for this end point

Secondary: Specific disease-free survival

End point title	Specific disease-free survival
-----------------	--------------------------------

End point description:

By definition, specific disease-free survival is the time to disease recurrence at any site, either locoregional and/or metastatic, or to treatment-related death. Deaths caused by other reasons were considered "censored" data on the date of death. When treatment failure was confirmed in the disease assessment 10-12 weeks after the end of radiotherapy, it was recorded as a disease that has lasted since onset, as the patient had never been disease-free. Patients who had no recurrence were censored on the date of the last check-up. The patients for whom no tumour assessments were available after the TPF treatment were censored on the date of the start of RT + CETUXIMAB. Patients who showed no progression and began a cancer treatment other than the study drug were censored on the start date of the other treatment.

End point type	Secondary
----------------	-----------

End point timeframe:

Until time to disease recurrence

End point values	ITT 1	ITT 2	ITT 3

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The safety monitoring started at the time the patient was included in the study (date of the signing of the informed consent form) and continued until the evaluation visit at 10-12 weeks after the RT+cetuximab treatment had been carried out.

Adverse event reporting additional description:

1. CTC from the NCI, version 3.0 during the induction and cetuximab/RT treatment, and for 90 days after the end of the radiotherapy
2. Common Late Toxicity Criteria from RTOG/EORTC from 90 days after the end of the radiotherapy

Assessment type	Systematic

Mucosal inflammation subjects affected / exposed occurrences (all)	77 / 93 (82.80%) 215	70 / 73 (95.89%) 202	
Oedema peripheral subjects affected / exposed occurrences (all)	9 / 93 (9.68%) 10	8 / 73 (10.96%) 9	
Pyrexia subjects affected / exposed occurrences (all)	21 / 93 (22.58%) 23	19 / 73 (26.03%) 21	
Immune system disorders			
Drug hypersensitivity subjects affected / exposed occurrences (all)	5 / 93 (5.38%) 6	5 / 73 (6.85%) 6	
Gastrointestinal disorders			
Constipation subjects affected / exposed occurrences (all)	13 / 93 (13.98%) 17	12 / 73 (16.44%) 16	
Diarrhoea subjects affected / exposed occurrences (all)	36 / 93 (38.71%) 49	29 / 73 (39.73%) 42	
Dry mouth subjects affected / exposed occurrences (all)	27 / 93 (29.03%) 39	26 / 73 (35.62%) 38	
Dysphagia subjects affected / exposed occurrences (all)	26 / 93 (27.96%) 38	25 / 73 (34.25%) 37	

Nausea subjects affected / exposed occurrences (all)	29 / 93 (31.18%) 36	25 / 73 (34.25%) 32	
Odynophagia subjects affected / exposed occurrences (all)	31 / 93 (33.33%) 61	31 / 73 (42.47%) 61	
Vomiting subjects affected / exposed occurrences (all)	30 / 93 (32.26%) 40	25 / 73 (34.25%) 35	
Respiratory, thoracic and mediastinal disorders Dysphonia subjects affected / exposed occurrences (all)	14 / 93 (15.05%) 20	14 / 73 (19.18%) 20	
Skin and subcutaneous tissue disorders Alopecia subjects affected / exposed occurrences (all)	41 / 93 (44.09%) 51	38 / 73 (52.05%) 48	
Skin toxicity subjects affected / exposed occurrences (all)	11 / 93 (11.83%) 16	11 / 73 (15.07%) 16	
Psychiatric disorders Insomnia subjects affected / exposed occurrences (all)	6 / 93 (6.45%) 6	6 / 73 (8.22%) 6	
Infections and infestations Candidiasis subjects affected / exposed occurrences (all)	10 / 93 (10.75%) 11	10 / 73 (13.70%) 11	
Conjunctivitis subjects affected / exposed occurrences (all)	7 / 93 (7.53%) 7	7 / 73 (9.59%) 7	
Respiratory infections and disorders subjects affected / exposed occurrences (all)	6 / 93 (6.45%) 7	5 / 73 (6.85%) 6	
Metabolism and nutrition disorders			

Decreased appetite subjects affected / exposed occurrences (all)	26 / 93 (27.96%) 37	23 / 73 (31.51%) 33	
Hypokalaemia subjects affected / exposed occurrences (all)	5 / 93 (5.38%) 7	4 / 73 (5.48%) 6	
Hypomagnesaemia subjects affected / exposed occurrences (all)	6 / 93 (6.45%) 8	6 / 73 (8.22%) 8	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 March 2008	This amendment responded to the clarifications requested by the IECs
14 May 2008	Among other changes, the following changes to the study protocol were made via this amendment: <ol style="list-style-type: none">1. Updating of the individuals in charge of the study2. Planned duration of the study3. Change of the toxicity endpoint criteria4. Evaluation of the performance status of the head and neck areas5. PET scan6. Withdrawal criteria7. Collection of information following the end of the radiotherapy treatment8. Management of radiodermatitis concomitant with cetuximab-induced skin rash9. Non-permitted concomitant medication10. Handling of clinical trial material and evaluation of treatment compliance11. Recording of vital signs and weight12. Nomenclature of response13. Recording of data when the treatment was suspended for reasons other than disease progression14. Evaluations during the follow-up15. Documentation of Adverse Events and Concomitant Treatments16. Secondary analyses17. Study chart18. Inclusion of new sites19. Correction of typographical errors
28 November 2008	The following changes to the protocol were made via amendment 3 to the protocol: <ol style="list-style-type: none">1. Clarification of the diagnosis of epidermoid carcinoma2. Update of the PERMITTED concomitant medication section3. Updating of the medication prior to cetuximab infusion4. Duration of the radiotherapy5. Informed consent6. Assessments of the Evaluation Visit Following the Neoadjuvant Treatment7. Assessments of the Evaluation Visit 10-12 weeks after RT with cetuximab8. Assessments of the end of study (EOS) visit9. Adverse Events10. Correction of typographical errors11. Correction of statistical errors12. Study chart
30 June 2009	<ol style="list-style-type: none">1. Change in the evaluation of radiotherapy safety and late toxicity2. Correction of typographical errors
21 September 2009	The Principal Investigator at two sites participating in the study was changed by this amendment.
04 October 2012	The Principal Investigator at one site participating in the study was changed by this amendment.

05 March 2015	<p>The change of the name of the primary objective of study TTCC-2007-02 was requested via this amendment, because of a typographical error at the time the protocol was prepared, and which was noticed by the sponsor when the initial analyses of the results were being carried out.</p> <p>The protocol had defined "laryngectomy-free survival" as the primary objective, when the protocol was designed to determine survival with a functional larynx. The parameters we used as a basis for calculating the final study sample and, therefore to build the statistics for the study, were always based on the results for survival with functional larynx based on the results from the GORTEC group study (data presented by the group at the ASCO conference in 2006 and later published as Poyntreau Y, y col. J Natl Cancer Inst 2009;101: 498 – 506), which was a study that, like ours, used TPF induction chemotherapy.</p> <p>In reality, the two parameters are not that different: Laryngectomy-free survival is defined as the time from the start of the treatment with TPF until the loss of the larynx for any reason or death caused by laryngeal cancer.</p> <p>Survival with functional larynx is defined as the time from the start of the treatment with TPF until the loss of laryngeal function for any reason or death caused by laryngeal cancer.</p> <p>In other words, the functional larynx parameter does not just include resected larynges, but also larynges that have been preserved but which do not function optimally: in reality, in the literature, the percentage difference between the two variables is usually 5-10%, with the functionality parameter being lower, i.e. we are more demanding when it comes to evaluating the study as positive.</p> <p>Similarly, the change of TFS Clinical Research Manager and change of management for the TTCC Group was notified.</p>
