

## Clinical trial results:

**An open-label, flexible dose, follow-up study to evaluate safety and efficacy of oral pramipexole (0.0625-0.5 mg/day) for 24 weeks in children and adolescents (age 6-17 years) diagnosed with Tourette Syndrome according to DSM-IV criteria and who have completed the double-blind phase of either study 248.641 or 248.644.**

### Summary

EudraCT number	2008-000342-32
Trial protocol	DE Outside EU/EEA
Global end of trial date	15 October 2009

### Results information

Result version number	v1 (current)
This version publication date	20 June 2016
First version publication date	16 July 2015

### Trial information

#### Trial identification

Sponsor protocol code	248.642
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00681863
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000041-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes
--	-----

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 November 2009
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	15 October 2009
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this open-label, flexible dose study is to assess the safety and efficacy of pramipexole over a 24-week period in children and adolescents (age 6-17 years inclusive) diagnosed with Tourette Syndrome according to DSM-IV criteria and who have completed either Study 248.641 or 248.644.

The safety of pramipexole will be evaluated collectively for the incidence of adverse events, the proportion of withdrawals due to drug related adverse events, and the assessment of the following scales:

- Children's Yale-Brown Obsessive Compulsive Scale (CY-BOCS);
- Child Behavior Checklist (CBCL) ;
- DuPaul Attention-Deficit / Hyperactivity Disorder (ADHD) Rating Scale-IV;
- Child Depression Inventory-Short Version CDI-S;
- Multidimensional Anxiety Scale for Children (MASC).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 May 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	United States: 44
Worldwide total number of subjects	46
EEA total number of subjects	2

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	21
Adolescents (12-17 years)	25
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

46 participants were enrolled in the trial. Out of these enrolled participants, 1 participant did not enter the trial.

### Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that the subject met all strictly implemented inclusion/exclusion criteria. Patients with Tourette Syndrome who have completed the preceding Study 248.641 or 248.644 were assessed for entry into this rollover study.

### Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Pramipexole
-----------	-------------

Arm description:

4 weeks individual dose titration starting with 0.0625 mg BID (twice daily), down-titration to 0.0625 QD (once daily) if not tolerated, and next steps 0.125 mg BID, 0.125 mg TID (three times daily) and 0.25 mg BID, according to efficacy assessment; established optimal dose for the remainder of the 24-week treatment period.

Arm type	Experimental
Investigational medicinal product name	Mirapex®, Mirapexin®, Sifrol®, Pexola®
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

4 weeks individual dose titration starting with 0.0625 mg BID (twice daily), down-titration to 0.0625 QD (once daily) if not tolerated, and next steps 0.125 mg BID, 0.125 mg TID (three times daily) and 0.25 mg BID, according to efficacy assessment; established optimal dose for the remainder of the 24-week treatment period.

Number of subjects in period 1	Pramipexole
Started	45
Completed	22
Not completed	23
Adverse event, non-fatal	1
'Reason other than those specified '	18
Lost to follow-up	2
Lack of efficacy	2

## Baseline characteristics

### Reporting groups<sup>[1]</sup>

Reporting group title	Pramipexole
-----------------------	-------------

Reporting group description:

4 weeks individual dose titration starting with 0.0625 mg BID (twice daily), down-titration to 0.0625 QD (once daily) if not tolerated, and next steps 0.125 mg BID, 0.125 mg TID (three times daily) and 0.25 mg BID, according to efficacy assessment; established optimal dose for the remainder of the 24-week treatment period.

Notes:

[1] - The number of subjects reported to be in the baseline period is not equal to the worldwide number of subjects enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one of the trial medication.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From baseline up to the start date of follow-up period, up to 24 weeks

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	12.1
--------------------	------

### Reporting groups

Reporting group title	Pramipexole
-----------------------	-------------

Reporting group description:

4 weeks individual dose titration starting with 0.0625 mg BID, down-titration to 0.0625 QD if not tolerated, and next steps 0.125 mg BID, 0.125 mg TID and 0.25 mg BID, according to efficacy assessment; established optimal dose for the remainder of the 24-week treatment period.

<b>Serious adverse events</b>	Pramipexole		
Total subjects affected by serious adverse events			
subjects affected / exposed	1 / 45 (2.22%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Nervous system disorders			
Syncope			
subjects affected / exposed	1 / 45 (2.22%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

<b>Non-serious adverse events</b>	Pramipexole		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	28 / 45 (62.22%)		
Injury, poisoning and procedural complications			
Skin laceration			
subjects affected / exposed	3 / 45 (6.67%)		
occurrences (all)	3		
Vascular disorders			
Orthostatic hypotension			

subjects affected / exposed occurrences (all)	3 / 45 (6.67%) 3		
Nervous system disorders Headache subjects affected / exposed occurrences (all)  Dizziness subjects affected / exposed occurrences (all)  Somnolence subjects affected / exposed occurrences (all)	9 / 45 (20.00%) 13  3 / 45 (6.67%) 4  3 / 45 (6.67%) 3		
General disorders and administration site conditions Fatigue subjects affected / exposed occurrences (all)  Pyrexia subjects affected / exposed occurrences (all)	6 / 45 (13.33%) 9  4 / 45 (8.89%) 4		
Immune system disorders Hypersensitivity subjects affected / exposed occurrences (all)	4 / 45 (8.89%) 5		
Gastrointestinal disorders Nausea subjects affected / exposed occurrences (all)	8 / 45 (17.78%) 10		
Respiratory, thoracic and mediastinal disorders Cough subjects affected / exposed occurrences (all)  Abdominal pain upper subjects affected / exposed occurrences (all)  Vomiting	3 / 45 (6.67%) 3  4 / 45 (8.89%) 6		

subjects affected / exposed occurrences (all)	4 / 45 (8.89%) 6		
Psychiatric disorders Tic subjects affected / exposed occurrences (all)	4 / 45 (8.89%) 6		
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)  Myalgia subjects affected / exposed occurrences (all)	4 / 45 (8.89%) 4  3 / 45 (6.67%) 4		
Infections and infestations Nasopharyngitis subjects affected / exposed occurrences (all)  Upper respiratory tract infection subjects affected / exposed occurrences (all)	5 / 45 (11.11%) 7  4 / 45 (8.89%) 7		
Metabolism and nutrition disorders Increased appetite subjects affected / exposed occurrences (all)	4 / 45 (8.89%) 4		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 November 2008	Extended the follow-up period after the end of treatment to optimize patient safety monitoring <ul style="list-style-type: none"><li>• Addition of a phone visit (Visit 12) seven days after Visit 11</li><li>• Addition of Visit 13, the final visit, 28 days after Visit 11</li><li>• Utilization of a Data Monitoring Committee</li><li>• Current expected AE list should be obtained from the Investigator Brochure</li><li>• Decision to send study drug to sites in child resistant bottles, not blisters in the maintenance phase</li><li>• Clarification of:<ul style="list-style-type: none"><li>- timing of the eye examination;</li><li>- duration of the down-titration phase;</li><li>- duration and on-study medication supply for down-titration phase;</li><li>- thyroid function parameters;</li><li>- age-appropriate range for serum creatinine</li></ul></li></ul>
05 May 2009	Study medication for the down-titration phase to only be supplied in child-resistant bottles

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
15 October 2009	This open-label follow-up study (subjects who had completed either Study 248.641 or 248.644 were to enter) was prematurely discontinued by Boehringer Ingelheim due to the negative results in the 248.644 study. Thus, the 248.641 study was never initiated, so only patients from 248.644 were entered into this (248.642) study.	-

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The sponsor cancelled this trial prematurely. Thus, enrollment for 248.642 (NCT00681863) was significantly less than what was planned (120 planned vs. 45 entered). Therefore, the objectives of this study could not be fully assessed.

Notes:
