

Clinical trial results:

A randomised, double-blind, parallel-group, placebo-controlled study to evaluate the efficacy and safety of desmoteplase in subjects with acute ischemic stroke

Summary

EudraCT number	2008-000622-40
Trial protocol	NL HU AT DE FR ES EE
Global end of trial date	07 July 2014

Results information

Result version number	v1 (current)
This version publication date	06 July 2016
First version publication date	25 July 2015

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 February 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 February 2014
Global end of trial reached?	Yes
Global end of trial date	07 July 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of desmoteplase 90 µg/kg versus placebo in terms of favourable outcome at Day 90 in patients with acute ischemic stroke.

Protection of trial subjects:

The nature of the illness often implies impairment to understand and /or consent to participate in a study in the acute setting. Hence, consenting procedures, normally done by the patient and/or his/her legal representative, were extended to include consent by an impartial witness, a proxy (a relative), or a study-independent physician. However, this was only allowed under the conditions listed in the protocol and if allowed by local law and regulations and approved by the relevant ethics committee or IRB

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 January 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Poland: 12
Country: Number of subjects enrolled	Spain: 54
Country: Number of subjects enrolled	Austria: 25
Country: Number of subjects enrolled	Estonia: 25
Country: Number of subjects enrolled	France: 35
Country: Number of subjects enrolled	Germany: 27
Country: Number of subjects enrolled	Switzerland: 3
Country: Number of subjects enrolled	Australia: 19
Country: Number of subjects enrolled	Hong Kong: 17
Country: Number of subjects enrolled	India: 31
Country: Number of subjects enrolled	Korea, Republic of: 52
Country: Number of subjects enrolled	Philippines: 3
Country: Number of subjects enrolled	Singapore: 8
Country: Number of subjects enrolled	Thailand: 56
Country: Number of subjects enrolled	Taiwan: 50

Country: Number of subjects enrolled	Vietnam: 72
Worldwide total number of subjects	492
EEA total number of subjects	181

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	175
From 65 to 84 years	308
85 years and over	9

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Screening for patients with occlusion or high-grade stenosis of the proximal cerebral arteries, and excluded patients with intracranial haemorrhage (ICH), signs of extensive infarct core, or subacute infarction.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Desmoteplase

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Desmoteplase
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

Desmoteplase 90 µg/kg single bolus within 3-9 hours after the onset of stroke symptoms

Arm title	Placebo
------------------	---------

Arm description: -

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

single bolus within 3-9 hours after the onset of stroke symptoms

Number of subjects in period 1^[1]	Desmoteplase	Placebo
Started	240	238
Completed	200	205
Not completed	40	33
Adverse event, serious fatal	23	22
Consent withdrawn by subject	8	2

administrative or other reasons	1	3
Lost to follow-up	8	4
Protocol deviation	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 492 patients were randomised (245 and 247 to placebo and treatment, respectively)
However, only 478 (238 and 240 to placebo and treatment, respectively) were actually treated

Primary: Modified Rankin Scale Score

End point title	Modified Rankin Scale Score
End point description: mRS response (score of 0 to 2) at Day 90	
The mRS is a clinician-rated scale designed to provide a global assessment of the patients dependency after stroke. The scale consists of a single item measuring the patient's function based on the ability to perform daily activities. The patient is rated on a 7-point scale from 0 to 6, where a score of 5 corresponds to severe disability, and 6 to death. Assessment of a pre-stroke mRS score is based on an interview addressing the status of the patient prior to the stroke.	
End point type	Primary

upper limit	1.81

Secondary: National Institutes of Health Stroke Scale (NIHSS) score

End point title	National Institutes of Health Stroke Scale (NIHSS) score
-----------------	--

End point description:

The NIHSS is a clinician-rated, 15-item scale designed to assess the severity of stroke-related neurological deficits: level of consciousness, eye movements, visual fields, facial symmetry, motor strength (arm and leg), coordination, sensation, language (aphasia and dysarthria), and neglect. Each item is rated on a 3-, 4-, or 5- point scale ranging from 0 (normal) to the maximum score (extremely severe symptoms). The total score of the 15 items ranges from 0 to 42, where lower scores indicate less impairment.⁹

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 November 2009	The statistical design of the study was modified in order to align with the twin-study (12649A; DIAS-4). The original design was changed to a fixed-sample design, including an interim futility analysis without adjusting the significance level in the final analysis. With the fixed design, a two-sided test at the 0.05 level of significance was used. The sample size was increased to 400 treated patients in order to be able to detect a smaller effect size of 13% (38% desmoteplase responders versus 25% placebo responders) instead of 15%. The following was added: hierarchical ordering of endpoints, identification of the full-analysis set (FAS) as the primary analysis set, sensitivity analyses.
09 May 2012	Post-follow-up visits, up to 2 years after IMP administration, were added to explore the long-term antibody response and safety profile. Also, long-term assessments of living arrangements, quality of life, and a measure of resource utilisation were added. The timing of the post-dose ECG was moved from 24 hours after IMP administration to within 4 hours after IMP administration, as this was closer to the peak plasma concentration. Central reading of the ECGs was added. Exclusion criteria were clarified
21 September 2012	The total number of patients planned was increased from 400 to 480, to preserve the risk of a type II error at an acceptable level, as a review of blinded data showed that the overall percentage of responders in the study was higher than anticipated.
18 October 2013	Additional analyses of the primary and secondary endpoints were added to investigate the subgroup of patients with a baseline NIHSS score of 8-24. Analysis of the mRS using ordinal logistic regression was moved from the exploratory analysis to the secondary analysis. Subgroup analyses investigating the relationship between time from stroke onset to treatment and clinical outcome were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
