Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000553-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 October 2011
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 October 2011
Global end of trial reached?	Yes
Global end of trial date	26 October 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the long-term maintenance of efficacy of SPD489, using a composite endpoint based on the attention-deficit/hyperactivity disorder (ADHD) Rating Scale – IV (ADHD-RS-IV) and Clinical Global Impression – Severity of Illness (CGI-S) rating scale, via a randomized withdrawal design in children and adolescents diagnosed with moderately symptomatic ADHD. Children and adolescents were treated with SPD489 (30, 50, or 70mg/day) for at least 6 months prior to entering a 6-week double-blind randomized (SPD489 or placebo) withdrawal period.

Protection of trial subjects:

The subject's informed consent was mandatory for study participation and was obtained in writing. This study was conducted in accordance with current applicable regulations, International Conference on Harmonisation (ICH) principles of Good Clinical Practice (GCP), and local ethical and legal requirements, and with the principles of the 18th World Medical Assembly (Helsinki 1964) and amendments of the 29th (Tokyo 1975), 35th (Venice 1983), 41st (Hong Kong 1989) and 48th (South Africa 1996) World Medical Assemblies, Declaration of Helsinki.

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	Sweden: 49
Country: Number of subjects enrolled	United Kingdom: 16
Country: Number of subjects enrolled	Belgium: 9
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 95
Country: Number of subjects enrolled	Hungary: 28
Country: Number of subjects enrolled	Italy: 20
Country: Number of subjects enrolled	United States: 40
Worldwide total number of subjects	276
EEA total number of subjects	236

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	158
Adolescents (12-17 years)	118
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 41 investigational sites in the European Union (EU) and the United States (US). The following 8 EU countries participated: Germany (12 sites), Sweden (4 sites), Hungary (4 sites), Poland (4 sites), Great Britain (4 sites), France (3 sites), Italy (3 sites), and Belgium (3 sites). Four sites were located in the US.

Pre-assignment

Screening details:

Subjects who had been exposed to double-blind test product for a minimum of 4 weeks, reached Visit 4, and completed the 1-week post-treatment washout during Study SPD489-325 were evaluated for study eligibility. US children and adolescents (6-17 years of age inclusive) were also evaluated for direct entry into the study.

Period 1

Period 1 title	Open-label (Non-randomized)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Lisdexamfetamine Dimesylate (LDX)(Open-label)
------------------	---

Arm description:

Consisted of at least 26 weeks where subjects were titrated to an optimal dose of LDX and then maintained on their optimal dose of open-label LDX.

Arm type	Experimental
Investigational medicinal product name	Lisdexamfetamine dimesylate (LDX)
Investigational medicinal product code	
Other name	Vyvanse, SPD489
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

30, 50, or 70 mg capsule once-daily at approximately 7:00 AM +/- 2 hours

Number of subjects in period 1	Lisdexamfetamine Dimesylate (LDX)(Open-label)
Started	276
Completed	165
Not completed	111
Home situation intolerable	1
'Did not provide end of study page '	1
Mother is a drug addict	1
Protocol violation	7
ADHD-RS score too high for random phase	1
Adverse event	44
Decision of medical monitor	1

Lost to follow-up	11
Met stopping criteria for CGI-S score	1
Lack of efficacy	21
Withdrawal by subject	22

Period 2

Period 2 title	Randomized Withdrawal
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

The test (SPD489) and reference products (placebo) were over-encapsulated and appeared identical

Arms

Are arms mutually exclusive?	Yes
Arm title	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)

Arm description:

Subjects were randomized to receive their optimal dose of LDX for up to 6 weeks.

Arm type	Experimental
Investigational medicinal product name	Lisdexamfetamine dimesylate (LDX)
Investigational medicinal product code	
Other name	Vyvanse, SPD489
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Over-encapsulated 30, 50, or 70 mg capsule once-daily at approximately 7:00 AM +/- 2 hours

Arm title	Placebo (Randomized Withdrawal)
------------------	---------------------------------

Arm description:

Subjects were randomized to receive placebo for up to 6 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Over-encapsulated placebo capsule once-daily at approximately 7:00 AM +/- 2 hours

Number of subjects in period 2^[1]	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)	Placebo (Randomized Withdrawal)
Started	78	79
Completed	60	16
Not completed	18	63
Protocol violation	2	1
Did not complete a visit	1	-
Adverse event	1	1
'Met relapse criteria per investigator',	8	35
Family reasons	-	1
Lack of efficacy	5	18
Withdrawal by subject	1	7

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Eight subjects completed the original protocol design/Open-label period but were not randomized.

End points

End points reporting groups

Reporting group title	Lisdexamfetamine Dimesylate (LDX)(Open-label)
Reporting group description: Consisted of at least 26 weeks where subjects were titrated to an optimal dose of LDX and then maintained on their optimal dose of open-label LDX.	
Reporting group title	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)
Reporting group description: Subjects were randomized to receive their optimal dose of LDX for up to 6 weeks.	
Reporting group title	Placebo (Randomized Withdrawal)
Reporting group description: Subjects were randomized to receive placebo for up to 6 weeks.	

Primary: Percent of Participants With Treatment Failures at End of the Randomized Withdrawal Period

End point title	Percent of Participants With Treatment Failures at End of the Randomized Withdrawal Period
End point description: Treatment failure was defined as a 50% increase (worsening) in Attention Deficit Hyperactivity Disorder Rating Scale (ADHD-RS-IV) total score and ≥ 2 point increase (worsening) in the Clinical Global Impression-Severity of Illness (CGI-S) score observed at any visit during the randomized withdrawal period compared to the respective scores at baseline of the randomized withdrawal period. This end point was analysed using the Randomized Full Analysis Set (Randomized FAS), which included all subjects who were randomized and received at least 1 dose of investigational product during the randomized withdrawal period. Subjects without an endpoint value were classed as treatment failures.	
End point type	Primary
End point timeframe: Baseline of the randomized withdrawal period and its relevant endpoint	

End point values	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)	Placebo (Randomized Withdrawal)

End point title	Percent of Participants With CGI-S at Randomized Withdrawal Baseline	
End point description:		
CGI-S assesses the severity of the subject's condition on a 7-point scale ranging from 1 (normal, not at all ill) to 7 (among the most extremely ill).		
This end point was analysed using the Randomized FAS, which included all subjects who were randomized and received at least 1 dose of investigational product during the randomized withdrawal period.		
End point type	Other pre-specified	
End point timeframe:		
Randomized withdrawal baseline		

End point values	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)	Placebo (Randomized Withdrawal)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	74	77		
Units: percentage of subjects				
number (not applicable)				
Normal, not at all ill	50	46.8		
Borderline mentally ill	50	53.2		
Mildly ill	0	0		

Moderately ill	0	0		
Markedly ill	0	0		
Severely ill	0	0		
Among the most extremely ill	0	0		

Statistical analyses

Statistical analysis title	CGI-S at Randomized Withdrawal Baseline
Comparison groups	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal) v Placebo (Randomized Withdrawal)
Number of subjects included in analysis	151
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.726
Method	Cochran-Mantel-Haenszel

Other pre-specified: Columbia-Suicide Severity Rating Scale (C-SSRS) During the Open-label Period

End point title	Columbia-Suicide Severity Rating Scale (C-SSRS) During the Open-label Period
-----------------	--

End point description:

C-SSRS is a semi-structured interview that captures the occurrence, severity, and frequency of suicide-related thoughts and behaviours during the assessment period. The interview includes definitions and suggested questions to solicit the type of information needed to determine if a suicide-related thought or behaviour occurred. The assessment is done by the nature of the responses, not by a numbered scale. This endpoint was analysed using the Open-label Safety Population, which included all subjects who received at least 1 dose of investigational product in the open-label period.

End point type	Other pre-specified
----------------	---------------------

End point timeframe:

From open-label baseline to Week-26

End point values	Lisdexamfetamine Dimesylate (LDX)(Open-label)			
Subject group type	Reporting group			
Number of subjects analysed	118			
Units: subjects				
Suicidal ideation	1			
Suicidal behaviour	0			

Statistical analyses

No statistical analyses for this end point

Reporting groups

Reporting group title	Lisdexamfetamine Dimesylate (LDX)(Open-label)
-----------------------	---

Reporting group description:

Consisted of at least 26 weeks where subjects were titrated to an optimal dose of LDX (30, 50 or 70 mg once-daily orally at approximately 7:00 AM +/- 2 hours) and then maintained on their optimal dose of LDX (30, 50 or 70 mg once-daily orally at approximately 7:00 AM +/- 2 hours).

Reporting group title	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)
-----------------------	--

Reporting group description:

Subjects were randomized to receive their optimal dose of LDX at 30, 50, or 70 mg once-daily orally at approximately 7:00 AM +/- 2 hours for up to 6 weeks.

Reporting group title	Placebo (Randomized Withdrawal)
-----------------------	---------------------------------

Reporting group description:

Subjects were randomized to receive placebo once-daily orally at approximately 7:00 AM +/- 2 hours for up to 6 weeks.

Serious adverse events	Lisdexamfetamine Dimesylate (LDX)(Open-label)	Lisdexamfetamine Dimesylate (LDX)(Randomized Withdrawal)	Placebo (Randomized Withdrawal)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 March 2009	Primarily incorporated revisions associated with the change in the primary objective of the study from long-term safety to long-term maintenance of efficacy. The Fixed Dose and Randomized Withdrawal Periods were added to the study.
17 December 2009	Added the Brief Psychiatric Rating Scale for Children (BPRS-C) and Columbia-Suicide Severity Rating Scale (C-SSRS) assessments. This Amendment also referenced the inclusion of subjects from the United States (US), where necessary.
21 May 2010	Changed the safety follow-up assessment from a telephone call to a site visit as required by the European Medicines Agency Paediatric Committee, 19 Feb 2010.
29 March 2011	Primarily clarified the statistical analysis of the separate components of the primary efficacy measure.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
