## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 October 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 August 2013
Global end of trial reached?	Yes
Global end of trial date	21 August 2013
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to investigate the long-term safety of fostamatinib in patients with RA who completed the treatment phase of Study C-788-006X, C-788-010, or C-788-011.

Protection of trial subjects:

This study was conducted in compliance with the ethical principles originating from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practices (GCPs) and applicable laws and regulations.

Patients provided their written consent to participate in the study after having been informed about the nature and purpose of the study, participation/termination conditions, and risks and benefits of treatment prior to admission to this study.

The study was approved by an Independent Ethics Committee/Institutional Review Board (IEC/IRB) before the start of the study.

Background therapy:

Patients may receive stable doses of methotrexate (with folic or folinic acid), azathioprine (not in combination with methotrexate), leflunomide (not in combination with methotrexate), sulfasalazine, chloroquine, hydroxychloroquine, gold, NSAIDs (including COX2 inhibitors), minocycline, or doxycycline.

Evidence for comparator: -

Actual start date of recruitment	29 August 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	Yes

## Subject disposition

### Recruitment

Recruitment details:

A total of 624 patients were enrolled: 1, 59, 183 & 381 were allocated to the 50mg twice daily (bid), 100 mg once daily (qd), 150 mg qd and 100 mg bid groups, respectively. As this was a long-term extension study no specific end date was given. Patients who were ongoing when the study was terminated are shown as completers.

### Pre-assignment

Screening details:

Treatments were assigned according to those given in the qualifying studies. All patients received investigational product.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This an open label extension study, but patients will remain blinded to their treatment assignment from the previous feeder study.

## Secondary: DAS28-CRP score

End point title	DAS28-CRP score
-----------------	-----------------

End point description:

The Disease Activity Score 28 using C-Reactive Protein (DAS28-CRP) is a measure of disease activity in rheumatoid arthritis (RA) and assesses the 28 joints RA commonly affects; the score includes the number of tender and swollen joints (out of 28), CRP level (a measure of inflammation in the blood), and the patient's global assessment of health (ranging from very good to very bad). These measures are then fed into a complex mathematical formula to produce the overall DAS on a scale from 1 to 10, where scores greater than 5.1 are considered to indicate active disease, scores less than 3.2 are considered to indicate with well controlled disease, and scores less than 2.6 are considered to indicate remission. bid = twice daily, CRP = C-reactive protein, DAS28 = Disease Activity Score based on a 28 joint count, n/a = not applicable, qd = once daily

## Secondary: HAQ-DI score

End point title	HAQ-DI score
-----------------	--------------

End point description:

Health Assessment Questionnaire - Disability Index, a measure of physical function. The HAQ-DI score is calculated by summing the category scores from 8 sub-categories (ie, scores for patient ability in dressing and grooming, rising, eating, walking, hygiene, reach, grip and common daily activities) and dividing by the number of categories completed. The HAQ-DI score takes values between 0 and 3, with a higher score indicating greater disability. A HAQ-DI response is a reduction from baseline in HAQ-DI greater than or equal to the minimally important difference (0.22). BID = twice daily, DMARD = disease-modifying anti-rheumatic drug, OR = odds ratio, PO = orally, QD = once a day.
