Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 April 2012
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 December 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study is a continuation of the study ZLB06_001CR with the objective of assessing efficacy, tolerability, safety of IgPro, as well as long-term health-related quality of life in patients with PID.

Protection of trial subjects:

This study was carried out in accordance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) guidelines, the Declaration of Helsinki (version of 1996), and standard operating procedures for clinical research and development at CSL Behring and the Clinical Research Organizations involved. The study was conducted under a protocol reviewed and approved by an IEC/IRB. The study was conducted by scientifically and medically qualified persons. The benefits of the study were in proportion to the risks; the rights and welfare of the subjects were respected; the physicians conducting the study did not find the hazards to outweigh the potential benefits; the results reported are accurate; and each subject or subject's parent or legal guardian gave his or her written informed consent before any protocol-driven tests or evaluations were performed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 August 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 7
Country: Number of subjects enrolled	Spain: 5
Country: Number of subjects enrolled	Sweden: 1
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 14
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Romania: 10
Worldwide total number of subjects	40
EEA total number of subjects	39

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	15
Adolescents (12-17 years)	7
Adults (18-64 years)	18
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects who had previously participated in the pivotal study ZLB06_001CR (NCT00542997) were enrolled in the extension study ZLB07_002CR.

Pre-assignment

Screening details:

The number of subjects and sites was dependent on the subjects' and sites' interest to continue the IgPro20 treatment following the pivotal study ZLB06_001CR.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	IgPro20
-----------	---------

Arm description:

Subcutaneous (SC) administration by the subject/parent/guardian with the planned weekly dose of IgPro20 to be the same as the subject's last dose recommended by the investigator in study ZLB06_001CR.

Arm type	Experimental
Investigational medicinal product name	IgPro20
Investigational medicinal product code	
Other name	IgG with Proline (IgPro), Hizentra
Pharmaceutical forms	Solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

IgPro20 is a liquid formulation of normal human IgG at a concentration of 20% administered as a SC infusion at weekly intervals. Subcutaneous administration by the subject/parent/guardian with the planned weekly dose of IgPro20 to be the same as the subject's last dose recommended by the investigator in study ZLB06_001CR.

Number of subjects in period 1	IgPro20
Started	40
Completed	36
Not completed	4
Adverse event, serious fatal	1
Consent withdrawn by subject	1
Subject moved to another country	1
Poor adherence to asthma treatment	1

Baseline characteristics

Reporting groups

Reporting group title	IgPro20
-----------------------	---------

Reporting group description:

Subcutaneous (SC) administration by the subject/parent/guardian with the planned weekly dose of IgPro20 to be the same as the subject's last dose recommended by the investigator in study ZLB06_001CR.

End points

End points reporting groups

Reporting group title	IgPro20
Reporting group description: Subcutaneous (SC) administration by the subject/parent/guardian with the planned weekly dose of IgPro20 to be the same as the subject's last dose recommended by the investigator in study ZLB06_001CR.	
Subject analysis set title	HRQL - At Baseline
Subject analysis set type	Sub-group analysis
Subject analysis set description: Baseline values for those subjects in the Full-Analysis health related quality of life (HRQL) data set (defined as all subjects entered into the study who complete a baseline and at least 1 follow-up HRQL assessment), who were at least 15 years of age.	
Subject analysis set title	HRQL - At End of Study
Subject analysis set type	Sub-group analysis
Subject analysis set description: End of study values for subjects in the Full-Analysis HRQL data set (defined as all subjects entered into the study who complete a baseline and at least 1 follow-up HRQL assessment), who were at least 15 years of age.	

Primary: Total Serum IgG Trough Levels

End point title	Total Serum IgG Trough Levels ^[1]
End point description: The IgG trough values per subject were aggregated to a median value, and then median values across subjects were summarized using descriptive statistics. The full analysis/intent to treat (ITT) dataset comprised all subjects treated with IgPro20 and for whom any efficacy data was available.	
End point type	Primary
End point timeframe: Up to 42 months	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Variables were summarized using descriptive statistics.	

End point values	IgPro20			
Subject group type	Reporting group			
Number of subjects analysed	40 ^[2]			
Units: g/L				
arithmetic mean (standard deviation)	7.97 (± 1.171)			

Notes:

[2] - ITT population

Statistical analyses

No statistical analyses for this end point

Secondary: Annualized Rate of Clinically Documented Serious Bacterial Infections (SBIs)

End point title	Annualized Rate of Clinically Documented Serious Bacterial Infections (SBIs)
-----------------	------------------------------------------------------------------------------

End point description:

The annualized rate was based on the total number of SBIs and the total number of subject study days for all subjects in the specified analysis population and adjusted to 365 days.

Potential SBIs included bacterial pneumonia, bacteremia and septicemia, osteomyelitis/septic arthritis, bacterial meningitis, and visceral abscess. If an adverse event (AE) was identified as a potential SBI, the AE was adjudicated by the Medical Monitor and Investigator to determine if the event fulfilled the predefined criteria for SBIs.

The full analysis/ITT dataset comprised all subjects treated with IgPro20 and for whom any efficacy data was available.

End point type	Secondary
End point timeframe:	
Up to 42 months	

End point values	IgPro20			
Subject group type	Reporting group			
Number of subjects analysed	40 ^[3]			
Units: SBIs per subject year				
number (not applicable)	0.048			

Notes:

[3] - Number of subject study days analyzed: 38208

Statistical analyses

No statistical analyses for this end point

Secondary: Annualized Rate of Infection Episodes

End point title	Annualized Rate of Infection Episodes
-----------------	---------------------------------------

End point description:

The annualized rate was based on the total number of infection episodes occurring during the study divided by the total number of subject study days for all subjects in the specified analysis population and adjusted to 365 days.

The full analysis/ITT dataset comprised all subjects treated with IgPro20 and for whom any efficacy data was available.

End point type	Secondary
End point timeframe:	
Up to 42 months	

End point values	IgPro20			
Subject group type	Reporting group			
Number of subjects analysed	40 ^[4]			
Units: infection episodes per subject year				
number (confidence interval 95%)	3.334 (2.993 to 3.703)			

Notes:

[4] - ITT population.

Number of Subject Study Days Analyzed: 38208

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Infection Episodes

End point title	Number of Infection Episodes
-----------------	------------------------------

End point description:

Total number of infections for the ITT population.

The full analysis/ITT dataset comprised all subjects treated with IgPro20 and for whom any efficacy data was available.

End point type	Secondary
----------------	-----------

End point timeframe:

Up to 42 months

End point values	IgPro20			
Subject group type	Reporting group			
Number of subjects analysed	40 ^[5]			
Units: infection episodes	349			

Notes:

[5] - ITT population

Statistical analyses

No statistical analyses for this end point

Secondary: Annualized Rate of Days Out of Work / School / Kindergarten / Day Care or Unable to Perform Normal Activities Due to Infections

End point title	Annualized Rate of Days Out of Work / School / Kindergarten / Day Care or Unable to Perform Normal Activities Due to Infections
-----------------	---------------------------------------------------------------------------------------------------------------------------------

End point description:

The annualized rate was based on the total number of days out of work / school / kindergarten / day care or inability to perform normal activities due to infection, and the total number of subject diary days for all subjects in the ITT population and adjusted to 365 days.

The full analysis/ITT dataset comprised all subjects treated with IgPro20 and for whom any efficacy data was available.

End point type	Secondary

No statistical analyses for this end point

Secondary: Health Related Quality of Life (Short Form 36 Health Survey)

End point title	Health Related Quality of Life (Short Form 36 Health Survey)
-----------------	--------------------------------------------------------------

End point description:

The Short Form 36 Health Survey is a 36-item questionnaire that measures generic health concepts that are relevant across age, disease, and treatment groups. The questions are grouped into eight domains: physical functioning, role-physical, bodily pain, general health, vitality, social functioning, role-emotional, and mental health. Scores range from 0 to 100, with higher scores indicating a better health state.

End point type	Secondary
----------------	-----------

End point timeframe:

At baseline and at the last available post-baseline observation for each subject (up to 42 months)

End point values	HRQL - At Baseline	HRQL - At End of Study		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	20	20		
Units: units on a scale				
median (full range (min-max))				
Physical Functioning	95 (75 to 100)	100 (20 to 100)		
Role-physical	100 (18.8 to 100)	100 (37.5 to 100)		
Role-emotional	100 (25 to 100)	100 (25 to 100)		
Social Functioning	100 (62.5 to 100)	100 (37.5 to 100)		
Bodily Pain	84 (22 to 100)	84 (22 to 100)		
Mental Health	85 (55 to 95)	80 (35 to 95)		
Vitality	65.6 (31.3 to 81.3)	75 (18.8 to 100)		
General Health	52 (15 to 82)	54.5 (20 to 92)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 January 2009	This protocol amendment included the change of the supervising investigator for Germany (Leiter der klinischen Prüfung according to German drug law) and the biometrics service provider as well as several minor editorial changes.
13 January 2009	This was a country-specific amendment applicable for study sites in the UK. To fulfill the requirements of the MHRA, the study duration was defined as exactly 30 months.
13 January 2009	This was a country-specific amendment applicable for study sites in Sweden. To fulfill the requirements of the Swedish Competent Authorities (Läkemedelsverket), the study duration was defined as exactly 30 months. Additionally, the investigators were advised to contact subjects by telephone between the 6 monthly visits.
06 July 2009	This amendment included an increase in the maximum storage temperature of IgPro20, a switch from 50 mL IgPro20 bottles to 20 mL bottles, and a clarification concerning calculation of the visit intervals.
06 December 2010	This was a country-specific amendment applicable for all study sites, except the UK. The individual study duration depended on the time between last infusion within study ZLB06_001CR and the availability of IgPro20 on the European market, and could vary from country to country. The study duration was originally expected to not exceed 30 months, but was defined as not exceeding 42 months by this amendment.
14 March 2011	This was a country-specific amendment applicable for study sites in the UK. Study duration was previously defined as exactly 30 months in Substantial Amendment 3.0 and was prolonged to 36 months in this protocol amendment to satisfy MHRA request of better defining the study duration.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
