

Clinical trial results:

A randomized, double-blind, placebo-controlled parallel group study to investigate the safety and efficacy of two doses of tiotropium bromide (2.5 µg and 5 µg) administered once daily via the Respimat device for 12 weeks in patients with cystic fibrosis.

Summary

EudraCT number	2008-001156-43

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000035-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 April 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 April 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study evaluates the effects of 12-week treatment with two doses of tiotropium bromide (2.5 µg q.d. and 5 µg q.d.) compared to placebo administered via the Respimat® device on lung function in patients with CF.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Administration of rescue medication was allowed at any point during the study as medically needed. Open-label salbutamol/albuterol MDI (100 µg per puff) was provided as rescue medication by BI.

Background therapy:

Patients maintained their background therapy , including inhaled corticosteroids (ICS).

Evidence for comparator: -

Actual start date of recruitment	23 September 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 10
Country: Number of subjects enrolled	Portugal: 20
Country: Number of subjects enrolled	United Kingdom: 49

Country: Number of subjects enrolled	United States: 221
Worldwide total number of subjects	620
EEA total number of subjects	324

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	168
Adolescents (12-17 years)	100
Adults (18-64 years)	348
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended specialist sites which would then ensure that they (the subject) met all strictly implemented inclusion/exclusion criteria. Subjects were not randomised to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Overall trial (Treatment period) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Patients randomised to receive matching placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2 inhalations once daily at the same time of day, ideally in the morning between 6 am and 10 am.

Arm title	Tiotropium Respimat 2.5 Micrograms
------------------	------------------------------------

Arm description:

Patients randomised to receive Tiotropium Respimat 2.5 micrograms once daily

Arm type	Experimental
Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2 inhalations once daily at the same time of day, ideally in the morning between 6 am and 10 am.

Arm title	Tiotropium Respimat 5 Micrograms
------------------	----------------------------------

Arm description:

Patients randomised to receive Tiotropium Respimat 5.0 micrograms once daily

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2 inhalations once daily at the same time of day, ideally in the morning between 6 am and 10 am.

Number of subjects in period 1^[1]	Placebo	Tiotropium Respimat 2.5 Micrograms	Tiotropium Respimat 5 Micrograms
Started	168	166	176
Completed	161	159	169
Not completed	7	7	7
Adverse event, serious fatal	2	1	-
Consent withdrawn by subject	-	-	3
Adverse event, non-fatal	4	4	3
Reason not explained above	1	1	1
Lost to follow-up	-	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one of the trial medication.

Secondary: Change From Baseline in CFQ Scores - Adolescents Group

End point title	Change From Baseline in CFQ Scores - Adolescents Group
-----------------	--

End point description:

The Cystic Fibrosis questionnaire (CFQ) is a disease-specific instrument that measures health-related quality of life (HRQOL) for adolescents (age 6-13) with CF. This validation questionnaire consists of 50 items on generic and disease-specific scales. The scores range from 0 to 100, with higher scores indicating better health.

Secondary: Amount of Tiotropium Eliminated in Urine From 0 to 4 Hours at Steady State (Ae0-4,ss)

End point title	Amount of Tiotropium Eliminated in Urine From 0 to 4 Hours at Steady State (Ae0-4,ss) ^[35]
-----------------	---

End point description:

Ae0-4,ss represents the amount of tiotropium that is eliminated in urine from time 0 to 4 hours at steady state

End point type	Secondary
----------------	-----------

End point timeframe:

pre-dose, and 5 minutes (min), 20 min, 1 hour (h), and 2 h post-dose

Notes:

[35] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: In this case, the amount of tiotropium that is eliminated in urine from time 0 to 4 hours is analyzed and hence, only tiotropium arms have been included in the analysis.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 August 2008	<ol style="list-style-type: none">1.Added a second (co-primary) endpoint.2.Implemented administration of age-specific CFQs. The change from baseline in CFQ at the end of Week 12 was added as a secondary endpoint.3.Restricted the collection of blood for pharmacokinetic (PK) evaluation to two subpopulations, and specified the timing of sample collection by subpopulation. This was also added as a PK endpoint.4.Clarified Exclusion Criterion 75.Specified the contents of each patient treatment box6.Required a 12-h washout of LABAs on PFT testing days7.Permitted the use of LABA/long-acting corticosteroid fixed dose combination products8.Allowed rescheduling of Visit 6 to comply with the permitted on-treatment TOBI regimen9.Added instructions for urine collection for the PK analyses
07 May 2009	<ol style="list-style-type: none">1.Specified that PFTs and body plethysmography should be conducted within ± 10 min of the specified time.2.Implemented new Inclusion Criterion 5c:pre-bronchodilator FEV1 at Visit 2 must have been within 15% of the value at Visit 13.Added an optional pre-bronchodilator forced expiratory maneuver to document the degree of reversibility.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

A "Missing" category is unavailable for the countrywise and age group breakdown of enrolled patients. Hence, 7 patients with a missing country have been added to "United States" and 7 patients with a missing age group to "Adults (18-64 years)".

Notes:
