Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 January 2017
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 August 2014
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and efficacy of Low Molecular Weight Dextran Sulfate (LMW-DS) to enhance engraftment and prevent IBMIR in islet transplantation to Type 1 diabetic subjects.

Protection of trial subjects:

Once the first islet transplantation was performed, subjects were required to perform periodic follow-up visits at days 1, 3, 7, 14, 21, 28, and 75, and at 6 and 12 months. The timing of all follow-up assessments will reset at the time of subsequent transplants. Clinical safety was monitored through routine physical examinations and appropriate laboratory assessments. Evaluations were to be made for sirolimus, cyclosporine and tacrolimus levels, as applicable. Immunosuppression levels were to be monitored from time of transplantation until the end of the study. Stopping rules for enrollment of subsequent patients were applied.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 July 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Scientific research
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 14
Country: Number of subjects enrolled	Sweden: 25
Worldwide total number of subjects	39
EEA total number of subjects	39

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	39
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The first subject was enrolled on 11-Jul-2008 and the last subject was enrolled on 18-Jan-2012. All subjects had reached the primary endpoint by 17-Jan-2014. The last subject's last study visit was on 21-Aug-2014. The study was conducted in three (3) centers in Scandinavia (2 in Sweden, and 1 in Norway).

Pre-assignment

Screening details:

Eligible subjects (type 1 diabetes confirmed by absence of C-peptide and a history of at least one confirmed episode of severe hypoglycemia in the year prior to study entry) were placed on the transplant Waiting List and periodically re-tested for continued eligibility until a compatible islet donor preparation was made available.

Pre-assignment period milestones

Number of subjects started	39
Intermediate milestone: Number of subjects	Screening: 39
Intermediate milestone: Number of subjects	Waiting List: 29
Number of subjects completed	24

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 4
Reason: Number of subjects	Ineligible during Waiting List: 5
Reason: Number of subjects	screen failure: 6

Period 1

Period 1 title	Baseline/Randomization
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	LMW-DS

Arm description:

Low Molecular Weight Sulfated Dextran (LMW-DS), 20 mg/mL

Subjects received LMW-DS prior, during and following the islet infusion

Arm type	Experimental
Investigational medicinal product name	LMW-DS
Investigational medicinal product code	
Other name	Low molecular weight dextran sulfate
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intraportal use, Intravenous bolus use

Dosage and administration details:

Prior islet infusion: Each subject received a bolus of LMW-DS (20 mg/mL) intraportally of 1.5 mg/kg body weight at 0 hour,

During islet infusion (Day 0): From 0-20 minutes, each subject received an infusion of LMW-DS (20 mg/mL) of 3 mg/kg added to the islet infusion and administered intraportally. From 20-32 minutes, each subject received an infusion of 0.7 mg/kg of LMW- DS added to the islet infusion "washing

solution" and administered intraportally,

Post-islet infusion: At 32 minutes, a continuous minutes intravenous infusion was initiated based on the subject's APTT at 20 (optionally at 22 minutes) and adjusted to achieve the target APTT of 150 ± 10 seconds. Subjects received LMW-DS for five (5) hours with close monitoring of APTT levels, i.e. at 10, 20, 22, 50, 90, 130 minutes and every 60 min thereafter (more often if necessary).

Arm title	State of the Art
Arm description: Control Arm with Heparin given during and post islet infusion according to concentrations routinely used in clinical islet transplantation	
Arm type	Active comparator
Investigational medicinal product name	Heparin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intraportal use

Dosage and administration details:

During islet infusion (Day 0): 70 U/kg body weight

Post-islet infusion: Continuous intraportal infusion of Heparin targeting an Activated Partial Thromboplastin Time (APTT) of 50 ± 10 seconds, during five (5) hours

Heparin was given to subjects randomized to the "State of Art" arm according to concentrations routinely used in clinical islet transplantation.

Number of subjects in period 1^[1]	LMW-DS	State of the Art
Started	10	14
Completed	10	14

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number enrolled corresponds to the number of subjects who consented participation in the study and were then screened for eligibility.

The number of subjects reported to be in the baseline period corresponds to the number of subjects who remained eligible during screening and waiting list period, and were randomised and exposed to one of the treatments.

Period 2

Period 2 title	75 days following first islet infusion
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	LMW-DS
Arm description: Low Molecular Weight Sulfated Dextran (LMW-DS), 20 mg/mL Subjects received LMW-DS prior, during and following the islet infusion	
Arm type	Experimental

Investigational medicinal product name	LMW-DS
Investigational medicinal product code	
Other name	Low molecular weight dextran sulfate
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous bolus use , Intraportal use

Dosage and administration details:

Prior islet infusion: Each subject received a bolus of LMW-DS (20 mg/mL) intraportally of 1.5 mg/kg body weight at 0 hour,

During islet infusion (Day 0): From 0-20 minutes, each subject received an infusion of LMW-DS (20 mg/mL) of 3 mg/kg added to the islet infusion and administered intraportally. From 20-32 minutes, each subject received an infusion of 0.7 mg/kg of LMW- DS added to the islet infusion "washing solution" and administered intraportally,

Post-islet infusion: At 32 minutes, a continuous minutes intravenous infusion was initiated based on the subject's APTT at 20 (optionally at 22 minutes) and adjusted to achieve the target APTT of 150±10 seconds. Subjects received LMW-DS for five (5) hours with close monitoring of APTT levels, i.e. at 10, 20, 22, 50, 90, 130 minutes and every 60 min thereafter (more often if necessary).

Arm title	State of the Art
------------------	------------------

Arm description:

Control Arm with Heparin given during and post islet infusion according to concentrations routinely used in clinical islet transplantation

Arm type	Active comparator
Investigational medicinal product name	Heparin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intraportal use

Dosage and administration details:

During islet infusion (Day 0): 70 U/kg body weight

Post-islet infusion: Continuous intraportal infusion of Heparin targeting an Activated Partial Thromboplastin Time (APTT) of 50±10 seconds, during five (5) hours

Heparin was given to subjects randomized to the "State of Art" arm according to concentrations routinely used in clinical islet transplantation.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 October 2009	<p>The amendment summary (i.e. Change Document) resulting in version 5.0 of the Clinical Study Protocol included the changes made to Version 3.0 (first effective/approved version) and also addressed comments and questions made to Version 4.0 by the Swedish Medical Products Agency.</p> <p>This amendment involved:</p> <ul style="list-style-type: none">• The removal of Part B from the study. The earlier version of the study (i.e. Version 3.0) included a 2-parted design (i.e. Part A and B). In contrast to Part A, Part B was designed to enroll T1D subjects who had undergone a renal transplantation (≥ 6 months prior enrolment)• Correction of the exclusion criterion regarding acceptable levels of panel-reactive anti-HLA antibodies (prior or current at the time of enrollment), i.e. exclusion criterion #10• Changes in the study treatment regimen with:<ul style="list-style-type: none">(a) clarification of the dosing and timing of control treatment, i.e. Heparin, in the "State of Art" arm; and(b) changes in the suggested induction immunosuppression therapy. I.e. (1) inclusion of rabbit ATG as therapy at initial transplantation, (2) exclusion of Daclizumab as Monoclonal Antibody IL-2 Receptor Blocker alternative, and (3) restriction of Basiliximab as therapy to be used in second or third transplantations(c) Clarification of dosing regimen of the suggested Calcineurin Inhibitors (i.e. Tacrolimus and Cyclosporine), and inclusion of anti-inflammatory therapy as part of the study treatment regimen.• Adjustment of the assessments performed during wait-list period and at baseline• Inclusion of definitions of "Partial Graft Function" and "Graft Failure" to support subsequent transplantations, and addition of time-window of eight (8) months since first transplantation as eligibility criterion for second and third transplants
13 July 2010	<p>This amendment includes the changes included to Version 6.0 of the clinical study protocol, which was never implemented as the amendment was not approved in Sweden (only in Norway).</p> <p>The amendment included:</p> <ul style="list-style-type: none">• Modified definition requirements for 'whole islet graft function' based on the current trial experience• Clarified timing and criteria for second islet transplant for subjects who could experience graft failure.• Updated the risk of administration of Sirolimus, Etanercept, and MMF to reflect the current label• Included use of Basiliximab for induction of immunosuppression subjects who could not tolerate ATG• Increased dose and adjusted trough levels of Tacrolimus and Cyclosporine for first, second, and third transplants to prevent graft rejection• A loading range was defined for Sirolimus
02 September 2010	<p>The amendment summary resulting in version 7.0 of the Clinical Study Protocol (last version implemented) included the changes made to Version 5.0 (implemented) and Version 6.0 (never implemented as the amendment was not approved in Sweden).</p> <p>This amendment included changes in Section 7.4.2 (Criteria and Timing for Subsequent Islet Transplant) of the study protocol to enable the approval of subsequent transplantations in a timely fashion, once a pancreas was made available for production of isolated islets. This included clarification regarding: by whom and when approval decisions were made, the type of clinical information needed for decision-taking and the criteria for eligibility of subjects.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
21 August 2014	<p>The second planned interim analysis including 24 subjects who had reached Day 75 following the first islet transplant showed no safety concerns.</p> <p>On 07-May-2013, the DSMB advised NIH to stop enrollment and terminate the study early due to futility. Subjects already enrolled in the study continued with their assigned treatment unless the DSMB had any reason to recommend otherwise.</p> <p>The interruption date is the date for the last subject's last visit in the study.</p>	-

Notes:

Limitations and caveats

None reported
