

## Clinical trial results:

### An Open label, Multi center, Phase 2 Study of Denosumab in Subjects with Giant Cell Tumor of Bone

#### Summary

EudraCT number	2008-001606-16
Trial protocol	NL DE AT FR ES GB PL IT SE Outside EU/EEA
Global end of trial date	17 May 2018

#### Results information

Result version number	v1 (current)
This version publication date	29 November 2018
First version publication date	29 November 2018

#### Trial information

##### Trial identification

Sponsor protocol code	20062004
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00680992
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Amgen Inc.
Sponsor organisation address	One Amgen Center Drive, Thousand Oaks, CA, United States,

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000145-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 May 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	17 May 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the safety profile of denosumab in participants with giant cell tumor of bone (GCTB).

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation Good Clinical Practice, Declaration of Helsinki, and applicable national or regional regulations/guidelines.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 September 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 144
Country: Number of subjects enrolled	France: 75
Country: Number of subjects enrolled	Australia: 41
Country: Number of subjects enrolled	Austria: 10
Country: Number of subjects enrolled	Canada: 22
Country: Number of subjects enrolled	Germany: 26
Country: Number of subjects enrolled	Italy: 83
Country: Number of subjects enrolled	Netherlands: 26
Country: Number of subjects enrolled	Poland: 39
Country: Number of subjects enrolled	Spain: 24
Country: Number of subjects enrolled	Sweden: 18
Country: Number of subjects enrolled	United Kingdom: 24
Worldwide total number of subjects	532
EEA total number of subjects	325

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	28
Adults (18-64 years)	481
From 65 to 84 years	23
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Adults and skeletally mature adolescents ( $\geq 12$  years of age) were enrolled in this open-label single-arm study. The study was conducted at 30 centers in North America, Europe, and Australia from 09 Sep 2008 to study completion on 17 May 2018. The planned study duration for each participant was at least 60 months (following protocol amendment 7).

### Pre-assignment

Screening details:

3 participants from study 20040215 (NCT00396279) were enrolled directly into safety follow-up phase without retreatment. They were excluded from all defined analysis sets and results are reported for the 532 participants enrolled into the treatment phase. Non-completion reasons are summarized for the on-study period (ie, initial treatment phase).

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1 (Denosumab 120 mg Q4W)

Arm description:

Participants with surgically unsalvageable disease (eg, sacral, spinal GCTB, or multiple lesions including pulmonary metastases) were enrolled into cohort 1.

Arm type	Experimental
Investigational medicinal product name	Denosumab
Investigational medicinal product code	AMG 162
Other name	Immunoglobulin G2 human monoclonal antibody to RANK ligand
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The dosing schedule was 120 milligrams (mg) subcutaneously (SC) every 4 weeks (Q4W) with a loading dose of 120 mg on study days 8 and 15. Denosumab was supplied as a sterile, clear, colorless to slightly yellow, preservative-free liquid in single-use 3.0 milliliter (mL) glass vials containing a deliverable dose of 1.7 mL.

<b>Arm title</b>	Cohort 2 (Denosumab 120 mg Q4W)
------------------	---------------------------------

Arm description:

Participants with surgically salvageable disease whose planned initial on-study surgery was associated with severe morbidity (eg, joint resection, limb amputation, or hemipelvectomy) were enrolled into cohort 2.

Arm type	Experimental
Investigational medicinal product name	Denosumab
Investigational medicinal product code	AMG 162
Other name	Immunoglobulin G2 human monoclonal antibody to RANK ligand
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

The dosing schedule was 120 mg SC Q4W with a loading dose of 120 mg on study days 8 and 15. Denosumab was supplied as a sterile, clear, colorless to slightly yellow, preservative-free liquid in single-use 3.0 mL glass vials containing a deliverable dose of 1.7 mL.

<b>Arm title</b>	Cohort 3 (Denosumab 120 mg Q4W)
Arm description: Participants who participated in study 20040215 and were eligible to enroll in the current study (20062004) for continuation of treatment were enrolled into cohort 3.	
Arm type	Experimental
Investigational medicinal product name	Denosumab
Investigational medicinal product code	AMG 162
Other name	Immunoglobulin G2 human monoclonal antibody to RANK ligand
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

**Dosage and administration details:**

The dosing schedule was 120 mg SC Q4W. Denosumab was supplied as a sterile, clear, colorless to slightly yellow, preservative-free liquid in single-use 3.0 mL glass vials containing a deliverable dose of 1.7 mL.

<b>Number of subjects in period 1</b>	Cohort 1 (Denosumab 120 mg Q4W)	Cohort 2 (Denosumab 120 mg Q4W)	Cohort 3 (Denosumab 120 mg Q4W)
Started	268	252	12
Safety analysis set	265	249	12
Efficacy analysis set	260	242	11
Completed	0	0	0
Not completed	268	252	12
Administrative Decision	83	42	5
Disease Progression	21	9	-
Consent withdrawn by subject	33	11	1
Complete Resection (as per protocol)	25	121	-
Ineligibility Determined	-	1	-
Adverse event, non-fatal	21	19	1
Other	19	14	1
Death	5	1	-
End of Trial	32	12	3
Pregnancy	5	-	1
Lost to follow-up	12	14	-
Requirement for Alternative Therapy	8	2	-
Noncompliance	4	6	-

## Baseline characteristics

### Reporting groups

Reporting group title	Cohort 1 (Denosumab 120 mg Q4W)
Reporting group description: Participants with surgically unsalvageable disease (eg, sacral, spinal GCTB, or multiple lesions including pulmonary metastases) were enrolled into cohort 1.	
Reporting group title	Cohort 2 (Denosumab 120 mg Q4W)
Reporting group description: Participants with surgically salvageable disease whose planned initial on-study surgery was associated with severe morbidity (eg, joint resection, limb amputation, or hemipelvectomy) were enrolled into cohort 2.	
Reporting group title	Cohort 3 (Denosumab 120 mg Q4W)
Reporting group description: Participants who participated in study 20040215 and were eligible to enroll in the current study (20062004) for continuation of treatment were enrolled into cohort 3.	

Reporting group values	Cohort 1 (Denosumab 120 mg Q4W)	Cohort 2 (Denosumab 120 mg Q4W)	Cohort 3 (Denosumab 120 mg Q4W)

## End points

### End points reporting groups

Reporting group title	Cohort 1 (Denosumab 120 mg Q4W)
Reporting group description: Participants with surgically unsalvageable disease (eg, sacral, spinal GCTB, or multiple lesions including pulmonary metastases) were enrolled into cohort 1.	
Reporting group title	Cohort 2 (Denosumab 120 mg Q4W)
Reporting group description: Participants with surgically salvageable disease whose planned initial on-study surgery was associated with severe morbidity (eg, joint resection, limb amputation, or hemipelvectomy) were enrolled into cohort 2.	
Reporting group title	Cohort 3 (Denosumab 120 mg Q4W)
Reporting group description: Participants who participated in study 20040215 and were eligible to enroll in the current study (20062004) for continuation of treatment were enrolled into cohort 3.	
Subject analysis set title	Adolescent PK Subset (Denosumab 120 mg Q4W)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Adolescent participants enrolled in the pharmacokinetic (PK) substudy who received at least 1 dose of denosumab with baseline PK measurement and at least 1 post-baseline PK measurement were included in the adolescent PK analysis set. Participants received denosumab 120 mg SC Q4W, starting on study day 1, with loading doses of 120 mg SC on days 8 and 15 in the first month of treatment for those enrolled in cohorts 1 or 2.	
Subject analysis set title	Adult PK Subset (Denosumab 120 mg Q4W)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Adult participants enrolled in the PK substudy who received at least 1 dose of denosumab with baseline PK measurement and at least 1 post-baseline PK measurement were included in the adult PK analysis set. Participants received denosumab 120 mg SC Q4W, starting on study day 1, with loading doses of 120 mg SC on days 8 and 15 in the first month of treatment for those enrolled in cohorts 1 or 2.	

### Primary: Number of Participants with Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Participants with Treatment-Emergent Adverse Events (TEAEs) <sup>[1]</sup>
End point description: AE: any untoward medical occurrence in clinical trial participant. Serious AE: AE that is fatal, life threatening, requires in-patient hospitalization/prolongation of existing hospitalization, results in persistent or significant disability/incapacity, congenital anomaly/birth defect or other significant medical hazard. Severity of AEs assessed according to Common Terminology Criteria for Adverse Events (CTCAE, v3.0) based on guideline: Grade 1: Mild; Grade 2: Moderate; Grade 3: Severe; Grade 4: Life-threatening or disabling; Grade 5: Death related to AE. Investigator assessed AEs for relatedness to study drug. Results presented for treatment-emergent events (TEAEs) (i.e. all AEs from first dose in initial treatment phase to end of initial treatment phase [or for participants entering retreatment, from first dose in initial treatment phase until end of retreatment phase]). Safety analysis set included all enrolled participants who received at least 1 dose of denosumab on the study.	
End point type	Primary
End point timeframe: From first dose of study drug up to last study visit for treatment-emergent period (until data cut-off for study completion; a maximum of approximately 111 months).	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analyses were performed as planned.

End point values	Cohort 1 (Denosumab 120 mg Q4W)	Cohort 2 (Denosumab 120 mg Q4W)	Cohort 3 (Denosumab 120 mg Q4W)

Serious TEAE	98	39	5	
Fatal TEAE	8	3	0	
TEAE leading to treatment phase discontinuation	27	24	1	
TEAE leading to study drug discontinuation	27	23	1	
CTCAE Grade 3, 4, or 5	121	59	6	
Any TEAE related to study drug	184	136	9	

## Statistical analyses

No statistical analyses for this end point

### Primary: Number of Participants who Experienced the Maximum Toxicity Grade (CTCAE Grade $\geq 3$ ) in the Indicated Clinical Chemistry Parameters

End point title	Number of Participants who Experienced the Maximum Toxicity Grade (CTCAE Grade $\geq 3$ ) in the Indicated Clinical Chemistry Parameters <sup>[2]</sup>
-----------------	---

End point description:

Serum samples for clinical chemistry were collected on study day 1 (baseline), day 15, week 5 and each study visit Q4W thereafter until last study visit for the on-study period (ie, until end of initial treatment phase). The parameters included albumin, calcium (albumin-adjusted), creatinine, magnesium and phosphate. Results are presented for number of participants who experienced the maximum toxicity grade for each of these clinical parameters. The maximum toxicity grade experienced by each participant was based on CTCAE, v3.0, and are summarized for Grade 3 and 4. Increases and decreases in relationship to the normal parameter ranges are indicated as 'Above' and 'Below' respectively. Safety analysis set included all enrolled participants who received at least 1 dose of denosumab on the study.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (day 1) up to last study visit for initial treatment phase (median duration approximately 30 months up to a maximum of approximately 109 months).

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analyses were performed as planned.

End point values	Cohort 1 (Denosumab 120 mg Q4W)	Cohort 2 (Denosumab 120 mg Q4W)	Cohort 3 (Denosumab 120 mg Q4W)	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	265	249	12	
Units: Participants				
number (not applicable)				
Calcium corrected Grade 3 (Above)	0	1	0	
Calcium corrected Grade 4 (Above)	1	1	0	
Calcium corrected Grade 3 (Below)	1	0	0	

Calcium corrected Grade 4 (Below)	2	0	0	
Phosphate Grade 3 (Below)	60	41	4	
Magnesium Grade 3 (Above)	4	5	2	
Magnesium Grade 3 (Below)	1	0	0	
Creatinine Grade 3 (Above)	0	1	0	
Albumin Grade 3 (Below)	1	0	0	

## Statistical analyses

No statistical analyses for this end point

### Secondary: Time to Disease Progression or Recurrence During the On-Study Period for Cohort 1, Presented as Kaplan-Meier Estimates of Probability

End point title	Time to Disease Progression or Recurrence During the On-Study Period for Cohort 1, Presented as Kaplan-Meier Estimates of Probability <sup>[3]</sup>
-----------------	--

End point description:

Time to disease progression or recurrence during the on-study period defined as time interval (in days) from date of first dose of study drug to date of earliest Progressive Disease (PD) during initial treatment phase. PD defined as response of progressive disease, locally recurrent disease or relapse as captured in Disease Status page of Case Report Form. If a participant had not had PD by end of initial treatment phase, time to disease progression or recurrence were censored at her/his end of initial treatment phase date. Median time to disease progression or recurrence for participants in cohort 1 was not reached so Kaplan-Meier estimates for probability (expressed as a percentage) of participants in cohort 1 to have disease progression or recurrence at months 6, 12, 24, 36 and 60 are presented. Efficacy analysis set included all enrolled participants who were eligible for the study and who received at least 1 dose of denosumab on the study. Analysis performed on cohort 1 only.

End point type	Secondary
----------------	-----------

End point timeframe:

From first dose of study drug up to the end of the initial treatment phase (median duration approximately 30 months up to a maximum of approximately 109 months).

Notes:

[3] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The secondary endpoint for time to disease progression applied to cohort 1 only.

End point values	Cohort 1 (Denosumab 120 mg Q4W)			
Subject group type	Reporting group			
Number of subjects analysed	260			
Units: Percent probability				
number (confidence interval 95%)				
Month 6	1.9 (0.3 to 3.6)			
Month 12	4.3 (1.8 to 6.8)			
Month 24	6.1 (3.1 to 9.0)			
Month 36	8.2 (4.6 to 11.8)			
Month 60	11.7 (7.1 to 16.2)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Percentage of Participants without any On-Study Surgery at Month 6 for Cohort 2

End point title	Percentage of Participants without any On-Study Surgery at Month 6 for Cohort 2 <sup>[4]</sup>
-----------------	--

End point description:

The percentage of participants without any surgery at month 6 was equivalent to the number of participants without any surgery by month 6 divided by the number of cohort 2 participants who had an opportunity to complete 6 months of treatment, expressed as a percentage. Efficacy analysis set included all enrolled participants who were eligible for the study and who received at least 1 dose of denosumab on the study. Analysis performed on cohort 2 only for those who had the opportunity to be on-study for at least 6 months.

End point type	Secondary
----------------	-----------

End point timeframe:

At month 6.

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The secondary endpoint for proportion of participants without any surgery at month 6 applied to cohort 2 only.

<b>End point values</b>	Cohort 2 (Denosumab 120 mg Q4W)			
Subject group type	Reporting group			
Number of subjects analysed	238			
Units: Percentage of participants				
number (confidence interval 95%)	92.0 (87.8 to 95.1)			

## Statistical analyses

No statistical analyses for this end point

### Secondary: Mean Serum Denosumab Trough Concentrations

End point title	Mean Serum Denosumab Trough Concentrations
-----------------	--

End point description:

Blood samples for determination of serum denosumab concentration levels were obtained from participants included in the PK substudy at baseline (prior to administration of study drug on day 1) and at scheduled time points during the study up to week 25. Analysis was performed on the PK analysis set. Only participants with available data at each indicated time point were included in the analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Blood samples were collected at baseline (day 1), days 8 and 15 and weeks 5, 9, 13 and 25.

<b>End point values</b>	Adolescent PK Subset (Denosumab 120 mg Q4W)	Adult PK Subset (Denosumab 120 mg Q4W)

Week 25 (n=8, n=11)	22400 (± 6690)	25400 (± 10800)		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug until last study visit; a maximum of approximately 113 months. The planned study duration for each participant was at least 60 months (following protocol amendment 7).

Adverse event reporting additional description:

Data are presented for the entire study duration and include AEs occurring during the treatment-emergent period (comprising both the initial treatment phase and retreatment phase) and AEs occurring after the treatment-emergent period (ie, during the safety follow-up phase).

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 December 2008	<ul style="list-style-type: none"><li>• Key inclusion criteria updated to include skeletally mature adolescents <math>\geq 12</math> years of age and clarify that skeletally mature adolescents must weigh at least 45 kilograms.</li><li>• Key exclusion criteria updated to exclude women of child bearing potential who are evidently pregnant or breastfeeding and participants enrolled in or who have not yet completed at least 30 days since ending other investigational device or drug study(s), or participants receiving other investigational agents.</li><li>• Sample size was clarified to include approximately 100 participants and the supporting sample size considerations were detailed.</li><li>• The safety follow-up phase of the study was extended from 6 months for up to 12 months after the end of the study date.</li></ul>
11 January 2010	<ul style="list-style-type: none"><li>• Study sample size increased from 100 participants to approximately 250 participants.</li><li>• Secondary objective and endpoint clarified to include participants who do not require any surgery.</li><li>• Eligibility criteria excluding women of childbearing potential who are evidently pregnant or breastfeeding was updated.</li><li>• Exploratory endpoints were added to the protocol.</li><li>• Addition of interim analysis corresponding with the increased sample size.</li></ul>
14 May 2010	<ul style="list-style-type: none"><li>• Protocol updated to allow enrollment of participants from Amgen Study 20040215.</li><li>• The exploratory objectives and endpoints were updated to include the proportion of participants who are able to undergo a less morbid surgical procedure compared with the planned surgical procedure at baseline for cohort 2 and disease status changes over time for all participants.</li></ul>
15 November 2010	<ul style="list-style-type: none"><li>• Study sample size increased from 250 participants to 375 participants.</li><li>• Secondary endpoints clarified.</li><li>• Analysis of safety data from the safety follow-up clarified in Section 10.6.3 of the protocol.</li></ul>
05 May 2011	<ul style="list-style-type: none"><li>• Exclusion criteria modified for contraception to include 2 methods of highly effective contraception during treatment and for 7 months after the end of treatment.</li><li>• Criteria for a participant to receive retreatment were clarified.</li><li>• The frequency of interim analysis was modified.</li></ul>
30 August 2011	<ul style="list-style-type: none"><li>• Study sample size increased from approximately 375 participants to approximately 500 participants.</li></ul>
15 May 2013	<ul style="list-style-type: none"><li>• Protocol amended to include PK analyses for an additional approximately 20 participants, approximately 10 adolescents and 10 adults.</li><li>• The end of the clinical trial defined as when participants enrolled through November 2012 (before Amendment 7) complete a minimum of 60 months on study, or until death or lost to follow-up, whichever comes first.</li><li>• Objectives, endpoints, sample collection and analyses were added consistent with the PK subset.</li><li>• Clarification that participants who rolled over from Study 20040215 will follow the Study 20062004 schedule under Amendment 7.</li><li>• End of treatment visit and safety follow-up visits clarified.</li><li>• Added oral examinations for all participants and provided additional guidance regarding investigational product dosing and oral/dental procedures.</li><li>• Safety reporting timelines clarified.</li><li>• Added updated pregnancy and lactation reporting section, with additional instructions regarding counseling women of childbearing potential on the risks of pregnancy while receiving denosumab and discussing methods to decrease the risk.</li></ul>

15 September 2015	<ul style="list-style-type: none"> <li>• Updated safety follow-up period information and listed AEs of interest to align the protocol language with postmarketing data collection requirements, and to increase compliance with long-term follow-up data requirements.</li> <li>• Removed interim analysis 4 as it was not a regulatory requirement, and no study report was expected from this interim analysis per regulatory requirements.</li> <li>• Updated medical history section for clarification and aligned with other sections of the protocol.</li> <li>• Modified the dose escalation and stopping rules section to clarify that the planned dose may be given up to 7 days before the scheduled visit, as long as there are 21 days between doses.</li> <li>• Updated calcium and vitamin D information to match XGEVA product information.</li> <li>• Updated Protocol Synopsis, Investigational Product Dosage and Administration sections with text regarding supplementation of all participants with calcium and vitamin D.</li> <li>• Updated the number of birth control methods and amount of washout time required between the end of treatment and pregnancy or breastfeeding to align with the informed consent and current safety information.</li> <li>• Pregnancy reporting was changed from the Pregnancy Surveillance Program to Amgen Global Patient Safety as per current Amgen standard.</li> </ul>
15 December 2017	<ul style="list-style-type: none"> <li>• Added guidance about monitoring participants for hypercalcemia upon discontinuation or interruption of denosumab, including: <ul style="list-style-type: none"> <li>◦ Clarification added to AEs of Interest.</li> <li>◦ Language for calcium and vitamin D supplementation.</li> </ul> </li> <li>• Updated End of Study language to clarify definitions of the 'End of Treatment', End of Safety Follow-up Phase, and 'End of Study' visits.</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
